1.0 INTRODUCTION

1.1 Purpose and Scope

This Phase IV As-Built Construction and Final Inspection Report (Phase IV As-Built Report) has been prepared by AMEC Massachusetts Inc. (AMEC) for the sediment portion of the Former Everett Staging Yard Disposal Site (the Disposal Site) located in Everett and Boston (**Figure 1-1**). The Disposal Site, which includes both uplands and a portion of an embayment of the Mystic River (**Figure 1-2**), is identified by Release Tracking Number (RTN) 3-13341. This Phase IV As-Built Report was completed for Wynn MA, LLC and Everett Property, LLC (collectively, Wynn) the current owners of the property on which the Disposal Site is located.

The Massachusetts Contingency Plan (MCP, 310 CMR 40.0000) requires that an As-Built Construction Report be prepared for any disposal site where an Engineered Barrier, cap or other on-site system for the containment and/or physical immobilization of oil and/or hazardous material is constructed as part of the remedial action alternative [310 CMR 40.0875(1)(b)]. The Comprehensive Remedial Action (CRA) implemented for the sediment portion of the Disposal Site includes construction of a clean cover (cap); therefore, this Phase IV As-Built Report has been prepared to meet the MCP requirements. The MCP also requires that a Final Inspection Report be prepared upon completion of construction activities and implementation of the CRA [310 CMR 20.0878]. A final inspection was conducted after remedial construction activities were completed and is described in this report.

1.2 Report Organization

In accordance with 310 CMR 40.0875(2), this report documents the construction activities conducted, techniques and materials used, tests and measurements performed and any significant modifications to the design or construction of the CRA as described in the combined Phase III Remedial Action Plan (RAP) and Phase IV Remedy Implementation Plan (RIP) submitted by AMEC (June 2017). The remainder of this Phase IV As-Built Report consists of the following sections:

- Section 2: Background – A description of the project background, roles of the parties involved in implementing the CRA, a summary of CRA activities, and a list of permits and approvals obtained.
- Section 3: Phase IV Implementation and As-Built Conditions – A discussion of construction materials and installation activities for the various facets of the CRA including a discussion of modifications from the Phase IV RIP.
- Section 4: Final Inspection – A description of the final inspection conducted by the Licensed Site Professional (LSP).

Supporting information are provided in figures, tables, and appendices referenced throughout the report.

2.0 BACKGROUND

2.1 Site Location and Locus Map

For the purposes of this report, the “Wynn Property” refers to the combined areas of land and water which are currently owned by Wynn and are located at One Broadway in Everett and an unnumbered parcel on Alford Street in Boston (**Figure 1-1**). The Wynn Property encompasses approximately 35 acres, which includes an upland portion (approximately 22 acres) and a portion of the adjacent Mystic River to the southwest (approximately 13 acres). The approximate latitude and longitude for the Site are 42.39 degrees north and 71.07 degrees west, respectively. The Universal Transverse Mercator (UTM) coordinates are approximately 4,695,650 meters north and 329,600 meters east.

The upland portion of the Wynn Property is an irregularly shaped, approximately 22-acre parcel of land roughly bounded by Alford Street/Broadway (Route 99) to the east, Massachusetts Bay Transit Authority (MBTA) railroad tracks to the west, an MBTA bus repair and maintenance facility to the north, and the Mystic River to the south. The sediment portion of the Wynn Property consists of an approximately 13-acre embayment of the Mystic River which is bounded to the northwest and north by the upland portion of the Wynn Property and to the northeast and east by the Boston Water and Sewer Commission’s Material Handling Facility (180-220 Alford Street).

For the purposes of this report, the “Disposal Site", or more formally the Former Everett Staging Yard Disposal Site, includes the uplands where chemical manufacturing occurred and the portion of Mystic River sediment which has been impacted by chemicals from the uplands. The boundary for the sediment portion of the Disposal Site depicted on **Figure 1-2** was drawn to separate areas where concentrations of Disposal Site-related chemicals are above “local conditions” from areas where concentrations are generally at or below local conditions. The disposal site boundary was also drawn considering the Conceptual Site Model (CSM) and principles of sediment transport dynamics. Delineating the extent of Disposal Site-related chemicals in sediment based on local conditions indicates the maximum potential extent of the aquatic disposal site boundary. Given the many historical and ongoing sources of contamination to the Mystic River (as well as natural sources of the same chemicals) this may still be an over-estimate of the impacts directly associated with chemical manufacturing on the upland portion of the Wynn Property.

The Disposal Site boundary encompasses approximately 7.8 acres of sediment. The main portion in the embayment encompasses approximately 7.3 acres and a smaller intertidal area to the west is approximately 0.5 acres. The total area within the Disposal Site boundary which poses a risk to benthic communities (the Remediation Area) is approximately 7.4 acres. This includes 7.3 acres in the main embayment and 0.1 acres in the smaller area to the west (**Figure 1-2**).

2.2 Regulatory History and Status

O'Donnell Sand & Gravel, Inc. (O’Donnell) submitted the initial notification of a release on the Wynn Property in January 1996 based on the presence of elevated concentrations of certain metals and petroleum hydrocarbons in soil as well as areas of low pH in groundwater. Consulting Engineers & Scientists (CES) filed a Phase I Initial Site Investigation and Tier Classification (classifying the Former Everett Staging Yard Site as Tier II) on behalf of O’Donnell in January

1997 (CES, 1997). Following the purchase of the property by Mystic Landing, LLC in 2001, additional subsurface and sediment investigations were completed under Tetra Tech Rizzo and others which were documented in a Phase II Report submitted in December 2007.

FBT Everett Realty, LLC purchased the property in October 2009 and in February 2012 GEI submitted a Phase II Comprehensive Site Assessment (CSA) which summarized the work previously described in the Tetra Tech Rizzo Phase II Report (no new sampling was performed). Wynn purchased the property in January 2015 and in December 2015, GZA GeoEnvironmental, Inc. (GZA) submitted a Supplemental Phase II Report which contained the results from an extensive sampling program as well as an updated Disposal Site boundary and risk characterization (GZA, 2015).

In December 2016, AMEC prepared a Revised Supplemental Phase II CSA Report (AMEC, 2016) which presented the CSM, assessed risks to human health and the environment, and defined the limits of those areas which could pose a risk. The CSM and an evaluation of local conditions identified arsenic, lead, mercury, and vanadium as specific contaminants of concern tied to historical manufacturing operations and processes on the property. The presence of phthalates and polychlorinated biphenyls (PCBs) detected in sediment were determined to be related to historical operations on the adjacent Monsanto West property.

In June 2017, a combined Phase III RAP and Phase IV RIP for the sediment portion of the Former Everett Staging Yard Site was submitted to MassDEP (AMEC, 2017). The goal of the remedial action was to eliminate significant risk to benthic organisms associated with exposure to contaminated sediment at concentrations which exceed benchmarks or local conditions. Sediment remediation was accomplished through the dredging and capping or capping alone of contaminated sediments. Dredged materials were transported off-site for disposal. These remedial actions addressed sediment contamination associated with former operations on the Wynn Property (i.e., arsenic, lead, mercury and vanadium). Contamination from other sources (metals likely from a drain pipe, phthalates and PCBs from Monsanto West, and polycyclic aromatic hydrocarbons (PAHs) and petroleum from stormwater runoff, industrial releases, and shipping-related impacts) was remediated incidentally during the remediation of the four metals associated with former operations on the Wynn Property. Dredging and installation of the cap were largely completed between October 2017 and March 2018.

On July 18, 2018, following discussion with MassDEP (Mr. Andrew Clark), Matt Grove of AMEC notified MassDEP of a Condition of Substantial Release Migration (SRM) which had resulted in the presence of phthalates (primarily bis(2-ethylhexyl)phthalate or BEHP) and PCBs in sediment on the Wynn Property at concentrations above local conditions. MassDEP issued RTN 3-35073 for this release so that it could be tracked separately from remedial actions related to metals contamination associated with the Former Everett Staging Yard Disposal Site. In accordance with Massachusetts General Law (M.G.L.) Chapter 21E, Section 5D(a)(4), Wynn is not required to conduct an Immediate Response Action (IRA) to address RTN 3-35073 because the concentrations of BEHP and PCBs have migrated in surface water from a known upstream source and do not pose an Imminent Hazard at the downstream Wynn Property. Wynn never owned or operated the upstream property from which BEHP and PCBs are derived. On August 15, 2018 Wynn filed a Downgradient Property Status (DPS) Submittal under RTN 3-35073 for BEHP and

PCBs present in sediments on their property which remain following remediation of metals in sediments associated with RTN 3-13341.

2.3 Roles and Responsibilities of the Parties Involved in Implementing the CRA

Wynn, as an Eligible Person [310 CMR 40.0006 (12)], is the Potentially Responsible Party for the Disposal Site. The other primary parties involved in the implementation of the CRA were:

- Remedial Action Contractor – SPS New England, Inc. (SPS) of Salisbury, Massachusetts
- LSP, Engineer of Record, and Construction Quality Assurance Consultant – AMEC

SPS, as remedial action contractor, employed several subcontractors to assist with remediation. The major remediation subcontractors were:

- Charter Contracting Company, LLC (Charter) of Boston, Massachusetts – mechanical dredging, operation of residual water treatment system, dewatered sediment processing & handling, capping
- J.R. Vinagro Corporation of Johnston, Rhode Island – barge demolition
- Lockwood Remediation Technologies, LLC of Leominster, Massachusetts – water treatment system construction
- Steele Associates Marine Consultants, LLC (Steele) of Falmouth, Massachusetts – bathymetric surveying
- ESS Laboratory (ESS) of Cranston, Rhode Island – environmental laboratory

AMEC reviewed the remediation contractor's submittals and provided construction observation and quality assurance for the CRA. AMEC employed subcontractors to assist with construction quality assurance (CQA), and LSP activities. The major subcontractors were as follows:

- LBP Solutions, LLC of Foxborough, Massachusetts – asbestos project monitor
- ProScience Analytical Services of Woburn, Massachusetts – asbestos analytical laboratory
- CEI Labs, Inc. (now Eurofins CEI, Inc.) of Cary, North Carolina - asbestos analytical laboratory

2.4 Summary of CRA Activities

The selected remedy included the following major activities:

- Mobilization and site preparation,
- Environmental controls,
- Barge demolition,
- Debris removal,
- Dredging,
- Sediment processing, water treatment and off-site disposal,

- Capping, and
- Demobilization.

Appendices C and D of the June 2017 combined Phase III RAP and Phase IV RIP contained the 60% Issued for Permitting package of Construction Drawings and Specifications. Final documents were issued for construction on August 23, 2017. Revisions and modifications to the drawings and specifications prior to and during construction are discussed in the following section.

2.5 Permitting

Construction and implementation of the Remedial Action primarily consisted of demolition, dredging and capping. These activities required federal, state, and local permits and/or approvals as outlined below. Inspection, sampling and analysis requirements for permits were included in the actual permits.

Permits that were obtained by Wynn included:

Permit/Approval	Permittee/ Applicant	Issuing Agency	Date of Issue or Effective Date	Permit/file/Reference Number
Section 404 Permit	Wynn MA, LLC	U.S. Army Corp of Engineers	December 12, 2016	NAE-2013-1026
Section 404 Permit Modification	Wynn MA, LLC	U.S. Army Corp of Engineers	September 11, 2017	NAE-2013-1026
Chapter 91 Waterways License (Navigational Dredging)	Wynn MA, LLC	MassDEP	August 3, 2016	14188
Chapter 91 Waterways License (Remediation)	Wynn MA, LLC	MassDEP	September 25, 2017	14512
Combined 401 Water Quality Certification (Remediation)	Wynn MA, LLC	MassDEP	August 25, 2017	X270532
Combined 401 Water Quality Certification (Navigational Dredging)	Wynn MA, LLC	MassDEP	January 22, 2016	X266062
MEPA Certification – Notice of Change	Wynn MA, LLC	Executive Office of Environmental Affairs	April 7, 2017 Secretary's Certificate Issued	EOEEA #15060
Order of Conditions (Remediation)	Wynn MA, LLC	Everett Conservation Commission	November 25, 2015	022-0095
Order of Conditions (Navigational Dredging)	Wynn MA, LLC	Everett Conservation Commission	September 24, 2015	022-0098

Permit/Approval	Permittee/ Applicant	Issuing Agency	Date of Issue or Effective Date	Permit/file/Reference Number
Order of Conditions (Remediation)	Everett Property LLC	Boston Conservation Commission	June 14, 2017	006-1517

3.0 PHASE IV REMEDY IMPLEMENTATION AND AS-BUILT CONDITIONS

Phase IV Remedy Implementation activities were conducted from September 18, 2017 through August 9, 2018. The primary components of the sediment remediation included:

- Mobilization and site preparation,
- Environmental controls and monitoring,
- Barge demolition,
- Debris removal,
- Dredging,
- Sediment processing, water treatment and off-site disposal,
- Capping, and
- Demobilization

The following sections provide a detailed summary of the CRA as implemented at the Site. AMEC provided oversight of the remedial construction activities for Wynn. Selected photographs taken during implementation are included in **Appendix A.**

3.1 Mobilization and Site Preparation

An existing conditions bathymetric survey was conducted by Steele on September 18, 2017 to determine existing elevations and refine the dredging plan based on current data. The existing conditions (and other bathymetric surveys during dredging and capping) were performed using a 24-foot aluminum survey vessel outfitted with an R2Sonic 2024 broadband multibeam echosounder with a beam with of 1º x 2º at the frequency of 200 kHz. A CODA Octopus F175 inertial motion reference unit provided attitude and heading corrections. A Valeport SVS real-time probe and Digibar S profile probe provided sound velocity corrections. Horizontal positioning was achieved using a Trimble SPS855 RTK positioning system and data was logged using Hypac 2015 and Hysweep data acquisition software.

On September 27, 2017, Charter and SPS began the mobilization of equipment and materials to the SPS bulkhead located on the Island End River (95 Behen Street, Everett, MA), approximately 1.5 miles south of the Disposal Site (**Figure 1-1**). Due to the ongoing soil remediation and construction on the upland portion of the Wynn Property, there was no area large enough to serve as the staging and material processing area for the sediment remediation. The material processing area constructed at the SPS bulkhead consisted of a series of up to five separate lined and blocked cells (**Figure 3-1**; note that bin 5 was never constructed). The bin construction was as follows:

- A high-density polyethylene (HDPE) geomembrane liner was installed over the bulkhead pavement to prevent migration of water from the material mixing bins.
- Bin blocks and jersey barriers were placed on top of this liner in the layout of the bins.
- A temporary layer of pavement was constructed in the base of the sediment bins to protect the geomembrane liner from equipment damage during unloading, stabilization and handling activities.

- The paved layer in the bins was strategically sloped towards the corners of the bins where sumps were installed to remove excess water.
- The liner was wrapped up around the exterior of the bin blocks and jersey barriers in order to form a water tight basin.
- An access road consisting of crushed stone was constructed between the bins to allow for a machine to easily access all sides of the mixing bins. Beneath the top 3-6 inches of stone, an HDPE liner was placed to protect the remaining stone from contamination.

Along with this layout, a spill plate was laid across the entire width of the gap between the material barges and the edge of the mixing bins. The plate was large enough to prevent material from falling onto areas outside of the barge and into the Mystic River. The sediment processing area also included a Portland cement silo, lighting plants, a 21,000-gallon frac tank (sump water storage), decontamination pad/wheel wash, material storage area, and office trailers.

In addition to the sediment processing area construction preparation, SPS and Charter mobilized tugboats, sediment barges, work boats, work barges, excavators, material handlers, and loaders. Charter constructed two field offices and an equipment storage room on the work barge that held the dredge excavator. Lockwood Remediation Technologies, LLC designed and constructed a temporary water treatment system on the water treatment barge. The details of the water treatment system are discussed in Section 3.6.

3.2 Environmental Controls and Monitoring

On September 28 and 29, 2017 a turbidity curtain and absorbent boom were installed across the embayment from the end of the Wynn concrete pier to the bank of the adjacent Boston Water and Sewer Commission (BWSC) property (see photographs in **Appendix A**). The turbidity curtain was installed to limit the migration of demolition debris and suspended sediment to areas outside the active work area.

To ensure the turbidity curtain was working effectively, turbidity readings were taken (and recorded) daily at three testing locations: inside the turbidity curtain, just outside the turbidity curtain, and 50 feet away from the project work site (background). Three turbidity readings were taken at each of the three testing locations: at the water surface, at the midpoint depth, and at the mudline. Turbidity monitoring was conducted using a Horiba U-50 Multi-Parameter Water Quality Meter with built-in data logging which was calibrated each day prior to use. The daily turbidity readings are summarized in **Table 3-1**.

In addition to the daily measurements, turbidity was measured inside the curtain prior to opening the curtain to determine if it was safe to open the curtain. The protocol for determining if the turbidity curtain could be opened (presented in **Table 3-2**) was based on ongoing operations, tidal cycle, and comparison to the background readings. During the remediation, the turbidity readings inside the curtain prior to a planned opening never exceeded 50 nephelometric turbidity units (NTU).

3.3 Barge Demolition

Demolition of five abandoned barges (shown on **Figure 1-2**) was required for remedy construction but was not in and of itself a remedial action. One sunken barge (#1 on **Figure 1-2**) and four additional barges located in the intertidal zone (#2 through #5 on **Figure 1-2**) were removed prior to dredging. The barges were not structurally stable such that they could be removed with salvage equipment and removed intact. As a result, they were dismantled/demolished in place.

On September 18, 2017, the barges were surveyed for presence of suspect asbestos, lead paint and other hazardous materials prior to the start of demolition. The primary focus of the assessment was Barge #2 as several structures were present on the barge (see photos in **Appendix A**). A total of 11 samples of suspected asbestos containing material (ACM) were collected by AMEC's certified asbestos inspector and sent to CEI Labs, Inc. for analysis. ACM was confirmed in two of the 11 samples which included roof material and window glaze of the structure sitting atop of the barge (see **Appendix B** for the asbestos sampling summary and laboratory results). On September 28, 2017 an Asbestos Notification Form (BWP AQ 04) was submitted to the MassDEP prior to the start of abatement by Vinagro on September 28 and 29, 2017. The ACM was placed in a sealed dumpster which was temporarily stored on site until October 2, 2017 when it was transported under an Asbestos Waste Shipping Record (AWSR) to Minerva Enterprises Landfill in Waynesburg, Ohio for disposal (see **Appendix B** for a copy of the AWSR).

The barge demolition commenced on October 2, 2017 and was also performed by Vinagro. Demolition was conducted using both barge-mounted and land-based equipment (see **Appendix A** for select photographs of barge demolition). Barges #3 and #4 were demolished using a land-based excavator (Cat 345 long reach and Cat 335F) that temporarily stockpiled the debris on polyethylene sheeting on the upland area adjacent to the shoreline. Barges #1, #2, and #5 were demolished using a barge mounted excavator (Volvo 480E). The wooden debris from these barges was placed in a work barge and unloaded onto the upland temporary stockpile area. Tugboats were used to move the demolition barge with the excavator and the debris barges around the embayment. Typically, the demolition of the barges using land based equipment was conducted at low tide and the demolition of the barges using water based equipment was conducted at high tide.

During the unloading of the debris from Barge #1, a 12-inch diameter pipe with a black coating was observed (see field report and photos in **Appendix B**). The pipe was separated from the wooden debris and sampled, along with the coating on some of the wooden debris, to determine if the materials were ACM. The laboratory results from ProScience Analytical Services (Woburn, Massachusetts) were negative for asbestos for both the pipe and wood coatings. A copy of the analytical laboratory report is included in **Appendix B**.

The stockpiled demolition materials were loaded from the temporary stockpile onto trucks for disposal. In all, 557.85 tons of barge demolition debris (creosote treated timbers) was transported to Aggregate Recycling Corporation of Eliot, Maine for disposal (see **Appendix C** for copies of the shipping documents). The barge demolition was substantially complete on October 14, 2017; however, Vinagro continued to clean up small pieces of demolition debris in the tidal flat using a work boat for several days following substantial completion.

3.4 Debris Removal

Prior to the start of the dredging operations, a debris survey was conducted to determine the extent of debris in the dredge area (see **Appendix D** for a copy of the survey). The survey was conducted using a 200 kHz Multi-Beam Sonar and to confirm the imagery the survey was also conducted using a 900 kHz Side Scan Sonar. A total of 58 targets were identified in the debris survey most assumed to be pilings associated with the razed dolphins from the former Monsanto shipping terminal.

Pilings were removed using a crane with a toothed open clamshell bucket. The crane was mounted on a barge that was moved into place with a tugboat. The dredge excavator with the environmental clamshell bucket was also used to remove some of the pilings but due to the difficulty with the bucket gripping the pilings, most of the pilings were removed with the crane. After the pilings were pulled from the sediment, they were placed in barges and transported to the sediment processing area for later disposal. In total, 232 wooden pilings and 7 steel pilings were removed as shown on **Figure 3-2**. A total of 110.25 tons of debris from the pilings were disposed of at Aggregate Recycling Corporation of Eliot, Maine (see **Appendix C** for a copy of the material shipping records).

3.5 Dredging

Mechanical dredging was used for the portion of the Remediation Area to be dredged. The dredged area was separated into two distinct areas:

- Elevation based (navigation dredge) – dredge to elevation -16.5 NAVD88
- Depth based (remediation dredge) – dredge to 1.5 feet below existing mudline

These two dredge areas equaled approximately 4.3 acres (2.2 acres in the main part of the embayment and 2.1 acres in the intertidal area). The limits of the sediment removal areas are shown on the Record Drawings (**Appendix E**).

In the elevation based dredge area, sediment was removed to elevation -16.5 NAVD88 to allow for sufficient depth for navigational purposes after capping. This included targeted dredging of certain areas of the deeper channel to achieve a final capped elevation of -15 NAVD88. In the depth based dredge area, remedial dredging was performed to a depth of 18 inches below existing mudline.

3.5.1 General Sediment Dredging

The dredge area was subdivided for construction purposes by SPS/Charter into 30 cells as shown in **Figure 3-3**. Cells 1 through Cell 12 along with Cell 27 and Cell 30, were dredged to a depth of -16.5 feet NAVD88 (elevation based, navigational dredging). Cell 14 through Cell 25 along with Cells 28 and Cell 29, were dredged to a depth of 18-inches below the original sediment depth (depth based remedial dredging). Cell 13 and Cell 26 were dredged to varying depths (18 inches or greater) to act as the transition between the remediation dredging and the navigation dredging. Bathymetric surveys were routinely conducted to confirm that the dredging had been conducted to the required elevations.

Sediment removal was conducted by mechanical dredging using an Anvil Attachments, 4 cubic yard, level-cut, hydraulic-actuated, environmental clamshell bucket on a Komatsu PC1250 excavator (See **Appendix A** for photographs). The excavator was mounted on a 110' by 40' barge with hydraulic-actuated spuds. The dredge barge and bucket were equipped with positional sensors that integrated with the Dredge Bucket Positioning System software which tied into the electronic Real-time Kinematic Differential Global Positioning System. The dredge excavator used the network of inclinometers, pressure sensors, and trigonometric functions to calculate bucket depth with respect to tide level. These systems were connected to a heads-up display in the excavator cab that provided the operator with the real-time position of the bucket in relation to the bathymetry, target depth in plan and section view. A tugboat and support boats were used to move the dredge barge into place.

The sediment dredging commenced on October 16, 2017 and was completed on January 20, 2018. The duration of dredging was longer than anticipated due to weather, and delays in transporting the processed sediment to the off-site disposal facilities which resulted in insufficient room at the sediment processing area. The Phase IV Remedy Implementation Plan (AMEC, 2017) estimated that 24,110 cubic yards of sediment would be dredged; however, according to the dredge bucket files, 20,449 cubic yards of sediment were actually dredged. The difference between the two quantities is primarily due to changes in elevation observed in the pre-dredge survey (the survey data used for the design volume was several years old) which also resulted in changes to the dredge footprint (i.e., elimination of a dredge area in the main navigation channel due to changes in elevation). These changes reduced the overall volume of material which needed to be dredged in order to achieve the remedial and design objectives.

3.5.2 Asbestos-Impacted Sediment Dredging

During the sediment pre-characterization sampling program (described in Section 3.6.3 below), Wynn elected to analyze sediment for asbestos based on presence of asbestos in soil on the upland portion of the Disposal Site. Samples were collected from the 84 locations shown on Figure 1 in Appendix B of the Non-Traditional Asbestos Abatement Work Plan (the "NT Plan") in **Appendix F.** Asbestos was detected at a concentration of <1% in one of the samples tested by CEI Labs, Inc. (see Appendix C of the Non-Traditional Asbestos Abatement Work Plan in **Appendix F** for the full lab report). Per MassDEP's Bureau of Waste Prevention, any detection was sufficient to require the impacted sediment to be managed as asbestos containing waste.

On October 19, 2017, eight additional sediment cores (4 inner ring and 4 outer ring cores) were collected around the location of SED-C46 to delineate the extent of the asbestos-impacted sediment. No asbestos was detected in the four inner ring sediment samples analyzed by CEI Labs, Inc. (see **Appendix F** for the laboratory report). Therefore, the extent of the asbestos-impacted sediment was defined by the locations of the four inner ring samples (see Appendix B of the NT Plan for the location of the inner ring samples). On November 6, 2017, the NT Plan outlining the abatement procedures, which was prepared by Environmental Health & Engineering, Inc. (EH&E) of Needham, was submitted to MassDEP. The NT Plan was subsequently approved by MassDEP on November 14, 2017.

On December 20, 2017, a small barge equipped with two dewatering boxes was mobilized to the embayment. The dewatering boxes were placed on top of polyethylene sheeting and a perimeter berm was constructed. The dewatering boxes were lined with 400-micron filter fabric. Sediment was dredged and placed directly into the dewatering boxes (See **Appendix A** for photographs). A pumping system was attached to the drains on the dewatering boxes and the drain water was passed through a 5-micron filter before being processed in the full water treatment system (described in Section 3.5.2) and eventually discharged within the turbidity curtain.

The barge with the two dewatering boxes was transported by tugboat to the SPS bulkhead for temporary storage. On January 2, 2018, the dewatering boxes were transported to the Crossroads Landfill in Norridgewock, Maine and 6.55 tons of dewatered sediment were disposed as asbestos waste. The dewatering boxes were returned to SPS bulkhead where on January 23, 2018 the boxes were decontaminated. On January 29, 2018, 1.35 tons of decontamination waste was transported to Crossroads Landfill in Norridgewock, Maine for disposal as asbestos waste. Copies of the Asbestos Waste Shipping Records are included in **Appendix F**.

3.6 Sediment Processing, Water Treatment and Off-Site Disposal

3.6.1 Sediment Processing

As the sediment was dredged it was placed into hopper barges for dewatering. Once a barge was filled with dredged sediment, a tugboat would move the sediment barge from the dredge barge to the temporary water treatment barge (see photos in **Appendix A**). Once next to the water treatment barge, water that drained from the sediment could be decanted prior to transferring the sediment barge to the sediment processing area at the SPS bulkhead. Beginning on October 23, 2017, if the sediment was overly saturated with water, a coagulant (LRT-E-50) was added to the water in the barge to aid in the precipitation of the sediment from the water. Typically, the sediment from the navigation dredging area was loose and required the addition of the coagulant. Sediment dredged from the tidal flats (depth based dredging area) was more cohesive and did not require the addition of the coagulant.

After the decanted water was pumped from the sediment barges to the extent practical, the sediment barges were moved by a tugboat from the work area to the SPS bulkhead for unloading and processing. The sediment barges would be positioned so that the sediment could be unloaded into Bin 1 or Bin 2 depicted on **Figure 3-1**. The sediment was removed from the barge using a materials handler or excavator with an open clamshell bucket. After the barge was empty, a loader was used to transfer Portland cement from the silo to the top of the sediment in the bin. The sediment and Portland cement was churned using an excavator with a mixing head. The material was transferred by excavator from Bin 1 or Bin 2 to one of the surrounding bins (2 through 4) to allow it to solidify to a material that passed the paint filter test for transportation and disposal. Once the material passed the paint filter test (i.e., no free water), the sediment was stacked into a stockpile (generally in Bins 3 or 4) or directly loaded into truck for off-site transportation.

Due to the high water content in some of the sediment, an attempt was made to speed up drying by adding Sludgeguard, a bulk solidifier amendment, in addition to the Portland cement. However, the use of Sludgeguard was abandoned after several days due to its ineffectiveness.

Any water that separated from the sediment or rain water that collected in the bins was pumped from the sumps to a 21,000-gallon frac tank. The water from the frac tank was transferred to empty sediment barges and treated back in the embayment using the water treatment system described in Section 3.6.2.

3.6.2 Water Treatment

The water treatment barge was anchored via spuds inside the turbidity curtain (see photos in **Appendix A**). Water was initially pumped into two 18,000-gallon weir tanks and then flowed by gravity into two 10,000-gallon clarifiers. Two chemicals (LRT-E-50 Coagulant and LRT-800 Series Flocculant) were added to the water as it entered the weir tanks to aid in the settling process. From the clarifiers the water was pumped through a multi bag filter vessel (containing six No. 2 bag filters). From the bag filter the water was pumped through a 10,000-pound zeolite vessel and then through four carbon vessels containing granular activated carbon. After the water passed through the carbon vessels and the flow meter/totalizer, it was discharged to the embayment inside the turbidity curtain. The water treatment system schematic is shown in **Figure 3-4** and the water treatment system layout is shown in **Figure 3-5**.

Samples were collected from the effluent for Disposal Site-related metals (arsenic, lead, mercury and vanadium), PCBs, BEHP, extractable phase hydrocarbons (EPH) fractions, total suspended solids (TSS), and pH. Effluent samples were collected weekly for the first five weeks of system operation and then on a monthly basis for three months until discharge was terminated. The results of the effluent sampling are summarized in **Table 3-3**. Laboratory reports for influent and effluent samples are included in **Appendix G**.

In total, 706,616 gallons of water were processed through the temporary water treatment system between October 18, 2017 and January 20, 2018.

3.6.3 Off-Site Disposal

Prior to the start of navigational and remedial dredging, the sediment to be dredged was pre-characterized in situ. The dredging area was divided into 84 sampling cells each representing approximately 500 tons (315 cubic yards) of in place sediment (see **Figure 3-6** for sampling locations). A five-point composite sample was collected from each core to represent the cell. Five individual grab samples from each sediment cell core were screened with a photoionization detector (PID). The depth interval with the highest PID readings was selected for volatile organic compound (VOC) analysis. If all PID readings in a core were the same or zero, the grab sample was randomly selected. The remaining sediment was used to prepare the composite sediment sample with at least five points across the dredging depth intervals. Pre-characterization sediment samples were analyzed without the addition of Portland cement.

The grab and composite samples were transported to ESS Laboratory for analysis of the following parameters: corrosivity (pH), flashpoint, reactivity (cyanide and sulfide), RCRA 8 metals, VOCs, semi-volatile organic compounds (SVOCs), PCBs, pesticides, herbicides, and moisture content. Toxicity Characteristic Leaching Procedure (TCLP) testing was run for each of the RCRA 8 metals on each sediment sample. TCLP testing would also have been performed if concentrations of other constituents detected in sediment were above theoretical levels at which the TCLP criteria

may be exceeded; however, none of the concentrations were exceeded. The laboratory reports from the pre-characterization samples are located in **Appendix H**

Shipping of the processed sediment commenced on October 20, 2017. Initially, sediment was shipped to Waste Management's Turnkey Landfill in Rochester, New Hampshire. Multiple truckloads of sediment were rejected at the Waste Management landfill because the facility determined that the sediment was too wet for them to effectively work once it arrived at the landfill. The solution was to allow the processed sediment to sit in the sediment bins for a longer period to allow more water to drain from the sediment. Once Waste Management allowed the shipments to the Turnkey Landfill to resume, they limited the number of shipments per day; therefore, material was also shipped to Waste Management's Crossroads Landfill in Norridgewock, Maine. Due to the need to further increase the amount of processed material which could be shipped off-site, the Sunny Farms Landfill in in Fostoria, Ohio was added as a disposal facility. Processed sediment was trucked to the MHF Services Transload Facility in Worcester and placed in railcars for shipment to Sunny Farms.

In total, approximately 40,162.63 tons of processed sediment was shipped for landfill disposal on MassDEP Bills-of-Lading (BOLs):

- 3,281 tons were shipped to Turnkey Landfill
- 25,056.12 tons to Crossroads Landfill, and
- 11,824.88 tons to Sunny Farms Landfill.

Copies of the previously submitted BOLs are included in **Appendix C**.

During the sediment dredging, uncontaminated debris was recovered including: wood (not associated with the barge demolition), concrete, granite blocks, a Jersey barrier, crane mats, old turbidity curtains, steel cable, etc. In total, 47.06 tons of miscellaneous uncontaminated debris was disposed of at Aggregate Recycling Corporation of Eliot, Maine (see **Appendix C** for a copy of the shipping manifest).

3.7 Capping

The primary function of the cap material is to provide a clean substrate suitable as habitat for benthic organisms. Once dredging was completed, imported clean cap material was placed to restore the dredged areas to pre-construction elevations (tidal flats) or to the permitted elevation of -15 feet NAVD88 (navigation dredge areas). In either case, the final cap thickness was to be approximately 18 inches to achieve the remedial goals of the project (note that the construction specifications allowed for 2 inches of overplacement and 1 inch of underplacement on cap materials). In addition, there were areas of the embayment outside the dredged areas where approximately 18 inches of clean cap material was placed directly on the underlying sediment. The total capping area was approximately 7.26 acres (5.17 in the main part of the embayment and 2.09 acres in the intertidal areas). A total of 21,795 CY of cap material was placed to achieve the final grades shown on the as-built cap plan in **Appendix E**.

For purposes of construction, SPS/Charter divided the cap area into 42 cells (see **Figure 3-7**). Capping commenced on January 11, 2018 in the C13 tidal flat cell and on January 12, 2018 in

the C6 through C8 Cells. Bathymetric surveys were routinely conducted to evaluate whether the necessary cap thickness had been achieved within a particular cell or group of cells. Capping with the exception of cell C13 was completed on March 20, 2018. The final cap for C13 was completed on August 9, 2018. Additional details about the C13 area are included in Section 3.7.5.

During all of the capping work, the turbidity curtain remained installed across the embayment to reduce any turbidity getting to the Mystic River. As dredging was still ongoing in the navigation channel at the time capping started, a second turbidity curtain was installed separating the tidal flat capping area from the navigation channel dredging area. This second turbidity curtain was removed once the dredging work was complete.

Additional details above the cap materials and installation of the different cap types are provided in the following subsections.

3.7.1 Cap Materials

The 42 cells on **Figure 3-7** included four distinct capping types:

- Sand Cap (Type A) - coarse sand designed to resist propeller induced erosion in the channel.
- Navigation Area Cap (Type B) - 2-layered cap composed of a layer of coarse sand (Type A material) capped with a medium gravel (Type B material) to resist propeller induced erosion near the docks.
- Tidal Flat Cap (Type C) - a silty sand to match existing material in the tidal flats.
- Modified Sand Cap (Type MA) – coarse sand blended with ¾-inch crushed stone to resist erosion and downslope movement on subtidal slopes.

In addition, outlet protection stone (8-inch median diameter) was placed adjacent to the BWSC stormwater outfall to protect the cap from erosion by stormwater.

The cap material was supplied by several gravel quarries. The approved source for each of the cap materials was:

- Type A Sand – Aggregate Industries, Wrentham Quarry
- Type B Gravel - Aggregate Industries, Swampscott Quarry
- Type C Silty Sand – Aggregate Industries, Littleton Quarry
- Type MA Blended Sand – Aggregate Industries, Littleton Quarry

Samples of the four cap materials listed above were submitted for grain size analysis at a frequency of one sample per 500 cubic yards to verify that the material met the specifications. Due to difficulties in obtaining sufficient quantity of materials which exactly met the grain size distributions in the specifications, the ranges were adjusted in consultation with AMEC's geotechnical, coastal, and channel design engineers. The original and final grain size ranges are summarized in **Table 3-2**. Grain size data for individual material samples are included in **Appendix H**. In addition, the cap material samples were also tested at a frequency of one per 500 cubic yards for VOCs, SVOCs, pesticides, PCBs, herbicides, dioxins, MCP 14 metals, and total organic carbon (TOC) to determine that they were contaminant free (see **Appendix H** for

the laboratory analytical results). All accepted cap materials were non-detect for organic constituents and herbicides (excluding TOC) and below the MCP S-1 and/or MassDEP published background values for metals.

Cap material was delivered to the SPS bulkhead and stored in previously constructed bins which had been decontaminated by power washing the pavement bottom and HDPE liner laid over the sidewalls after all the sediment was removed. The wash water was pumped to a barge which was then moved to the water treatment system for processing. When capping material was needed, hopper barges were loaded at the bulkhead and moved by tugboat to the embayment.

3.7.2 Sand Cap (Type A) Installation

In the subtidal areas outside the navigational dredge area (Cells A1 through A19 on **Figure 3-7**), approximately 18-inches of Type A (sand) was placed on either the dredged surface (Cells A1 through A4 and A19) or the pre-remediation sediment surface (cells A5-A18) so that the cap elevation was generally below –15 feet NAVD88. The sand layer was designed to resist propeller induced erosion which might occur in the channel. The cap material was installed using the dredge excavator with the environmental clamshell bucket (see **Appendix A** for photographs). Cells A1 through A19 required a total of 9,651 CY of Type A material.

3.7.3 Navigation Area Cap (Type B) Installation

In the navigation area (Cells B1 through B5 on **Figure 3-7**) the cap consisted of two layers: sand (Type A material) and gravel (Type B material). Initially an approximately 12-inch thick layer of sand was placed across the cells to strengthen the underlying sediment and support the gravel layer. Once the thickness of the sand layer was confirmed by bathymetric survey, an approximately 6-inch thick layer of gravel was placed on top of the sand. The actual in place thicknesses of the two layers varied slightly across the cells; however, the total cap thickness was approximately 18 inches as designed. The design maximum elevation of the top of the cap was approximately -15 feet NAVD88 in order to provide sufficient water depth for vessel passage and maneuvering even at low tide. The gravel layer was designed to resist propeller induced erosion during maneuvering into and away from the docks where propeller forces were expected to be strongest. Both the Type A sand material and Type B gravel were installed using the dredge excavator with the environmental clamshell bucket (see **Appendix A** for photographs). Cells B1 through B5 used 1,849 CY of Type A material and 1,557 CY of Type B material.

3.7.4 Tidal Flat Cap (Type C) Installation

As shown on **Figure 3-7**, there were three areas of intertidal capping: the eastern tidal flats (Cells C1 through C12), an intertidal area adjacent to the newly constructed bulkhead (Cell C13) and a small tidal flat area outside the embayment (Cell C14). Each of the intertidal areas were capped with Type C silty sand material.

For the large eastern tidal flat area (cells C1 through C12), the majority of the cap material was placed using the dredge excavator and a low ground pressure bulldozer. The dredge barge and sediment barge, loaded with Type C material, were moved into the area at high tide and cap material was unloaded to create a temporary stockpile in the water. At low tide, a low ground

pressure bulldozer that was staged in the upland construction site was used to spread the Type C material around to the required elevation (see **Appendix A** for photographs). In total, 6,378 CY of Type C material was used in the capping of Cells C1 through C12.

In the other two intertidal areas (Cell C13 and C14) the Type C material was directly placed using the dredge excavator with the environmental clamshell bucket. Depending on how much material was needed, full or partial buckets of cap material were collected from the sediment barge and deposited by slowly opening the excavator environmental bucket and allowing the material to be placed in a controlled manner. Cell C13 used 395 CY of Type C material and Cell C14 used 235 CY of Type C material. The intertidal cap was placed to the original grade elevations.

3.7.5 Cell C13 Cap Modification

A natural groundwater seep in Cell C13 began eroding a channel in the newly installed Type C cap material (see **Appendix A** for photographs). Over time the combination of the seep and tidal action eroded a significant portion of the cap. Multiple attempts were made to place additional Type C material during the capping process. However, this approach was abandoned as it became clear that the cap material would not remain stable over the long term. Wynn requested approval to place different cap materials in C13 to correct the erosion of the previously placed cap and manage flow from the seep from each of the agencies having jurisdiction over C13 as described below.

- April 5, 2018, Wynn requested that Everett Conservation Commission Amend the Order of Conditions for DEP File No. 022-0109
- On April 11, 2018, Wynn requested a modification to the existing USACE permit (NAE-2013-1026)
- April 13, 2018, Wynn requested a modification to MassDEP 401 Water Quality Certification (Transmittal Number X270532)
- May 24, 2018 Wynn requested a Minor Project Modification to MassDEP Chapter 91 License 14512.

In order to achieve the previously permitted design elevations in the C13 area, coarser grained, rounded materials (Type D) were placed on the existing subgrade. In addition, a fabric-lined, stone channel was constructed at the location of the seep to manage the water flow. The modified cap was constructed by placing a layer of ¾-inch rounded stone below a layer of 1.5 to 3-inch diameter rounded stone. The seep channel was constructed of 8-ounce nonwoven filter fabric on top of the existing Type C material followed by a six-inch layer of ¾ inch rounded stone followed by a layer of four-inch rounded stone with a thickness as needed to meet the previously permitted elevations (see **Appendix A** for photographs).

The modified cap, including the channel, were installed by SPS between August 2, 2018 and August 9, 2018. All work was conducted in the dry when the C13 area was exposed at low tide. Elevation control was completed using survey grade stakes to ensure the final cap elevations were achieved. The excavator barge and material barge were strategically positioned based on

the work area and tide to allow for material placement with the long reach excavator (see photo in **Appendix A**).

3.7.6 Blended Sand Cap (Type MA) Installation

In the original design the transition areas between the navigational dredge area and intertidal areas were to be capped with Type A sand. However, material that met the original Type A specification was unable to be procured even by procuring a blended product. After consulting with AMEC's geotechnical engineers, the decision was made to blend coarser material ¾-inch stone with sand that most closely met the design specification for use in the transition areas between MLW and the navigational channel. The grain size distribution for this material is shown on **Table 3-4**. The blended sand/stone was placed as an approximately 18-inch thick layer in Cells MA1 through MA4 on **Figure 3-7**. A total of 1,651 CY of the blended sand cap was installed in these areas.

3.7.7 Outlet Protection Structure

Adjacent to the existing BWSC stormwater outfall pipe in the southern corner of the tidal flats (Cell C1 on **Figure 3-7**), stone outlet protection was installed to protect the cap from erosion. The stone outlet protection was designed to be 34 feet long and 15 feet wide at is widest point. After the area was dredged, Type C cap material was placed to bring the area close to the desired final grade. An 8 ounce non-woven filter fabric was placed on the newly installed cap material to prevent migration of fine particles through the voids in the stone and distribute the weight of the stone to prevent settlement into the underlying cap material (see photos in **Appendix A**).

The layout of the stone outlet protection was modified after the March 3, 2018 inspection indicated that the flow of water from the outfall had changed slightly from pre-dredging to post capping. The outfall protection was shortened and widened by removing stone from the northern end and placing it on the east side near the outfall pipe (see photos in **Appendix A**). Additional geotextile was shingled under the existing fabric prior to relocating the stone. This change in layout was made to resist erosion of the cap from the change in flow pattern observed in the field.

4.0 FINAL INSPECTION

AMEC provided a full-time field construction inspector to observe the progress of construction as the LSP's representative. AMEC's full-time field inspector was responsible for observing the construction and preparing daily reports and other Construction Quality Assurance forms to document the construction in sufficient detail and with sufficient continuity to provide documentation that the construction complies with the design drawings and specifications. Documentation included daily work summaries of construction activities, field measurements, and construction photographs.

The LSP was directly involved in the review of the interim survey data which was used to determine whether dredging or capping cells had achieved the required elevations. Final completion of the dredging and capping components was determined based on final acceptance of all dredging or capping cells. In addition, the LSP conducted site visits and inspections on several occasions during the course of the work as specific issues were identified.

As required by 310 CMR 40.0878(3) a list of any federal, state, or local permits, licenses and/or approvals related to the design, construction and/or operation of the selected remedial action alternative is included in Section 2.5 of this report.

The final inspection of the majority of the project was performed on March 3, 2018 in accordance with 310 CMR 40.0878. As mentioned above, interim survey data served as inspections of the components (i.e., dredging or capping) as each component was completed. Final inspection activities consisted of a site walk to check that completed construction activities had been performed in compliance with the Phase IV RIP, including the Construction Drawings and Specifications, and approved design modifications and submittals. Natalie Brown (Wynn), Bowen Chen (Wynn), Matt Grove (AMEC LSP), Danielle Ahern (AMEC Engineer of Record), and Katherine Mason (Charter Project Manager) attended the final inspection.

Danielle Ahern (AMEC Engineer of Record) and Bowen Chen (Wynn) inspected the C13 area on August 8, 2018 when construction was substantially complete. A final inspection was conducted by Matt Grove (AMEC LSP), Natalie Brown (Wynn) and Bowen Chen (Wynn) on November 13, 2018.

It is the opinion of the LSP that the Comprehensive Remedial Action has been constructed in accordance with the Phase IV RIP with modifications described herein that do not materially affect the intended function of the design. A Phase IV Completion Statement was prepared which includes an Opinion from the LSP that the Phase IV activities conform to applicable Phase IV requirements and performance standards. The certification required by 310 CMR 40.0009 is provided in Section G of the Phase IV Completion Statement which was submitted electronically through eDEP.

Travel Time		Reason for Travel	**To Inspect for and Collect Suspect ACM (Asbestos Containing Material) on Abandoned Barge**			Weather	**Mostly cloudy, temps in 70's**
Project Name	**Wynn Construction Oversight**				Project No.	**3651170065**	
AMEC Foster Wheeler On-Site	**Mark Maggiore (08:30-10:15)**				Permit No.		
Other Personal On-Site:	SPS New England, Inc and Vinagro				Location	**Everett, MA**	

Personnel On Site
Greg Bashaw (SPS New England- Boat Operator)
Joe Pasquerella and 2 others (Vinagro)

Equipment
Moterized Skiff for transport

Work Performed
A tailgate safety meeting was conducted prior to the start of work. Group traveled to the abandoned barge via motorized skiff.

The barge was fitted with a large steel space and a smaller wooden structure with a concrete slab on the deck of the barge. Both structures were in poor condition and open to the elements with piles of debris inside and outside of the structures. Both structures and the debris piles were inspected within safety limits. Certain areas inside the structures and portions of the debris piles were not accessed due to safety concerns.

Suspect ACM materials were noted inside and outside the structures as noted below:

- Asphalt roofing and felt paper was mixed with wooded debris outside the wooden structure. Three samples were collected: two from a debris pile in between the two structures and one from a debris pile in front of the wooden structure.
- Window glazing was observed on two of the outside windows as well as some broken windows inside the wooden structure. Two samples were collected, one at window 1 (east side) and one on window 2 (behind the wooden structure). Due to safety hazards, no samples of the broken windows inside the wooden structure were collected.
- There were two electrical service panels, one in the wooden structure and one in the metal structure. No possible transite materials were noted inside the panel in the metal structure. Very little insulation was present behind the panel in the wooden structure. A sample was taken from insulation behind the electrical panel inside the wooden structure.
- Insulation along the walls of the metal structure and inside a conduit outside of the metal structure was collected.
- Insulation from inside piping in the debris pile outside the wooden structure was collected.
- Gasket flanges and belts in debris piles inside the metal structure were collected.

Sample ID #	Description	Location/Area
Barge 1-A	Black roofing material	Debris pile outside wooden structure
Barge 1-B	Black misc roofing material	Debris pile in between the two structures
Barge 2	Black tar/roofing material	Debris pile in between the two structures
Barge 3-A	White window glazing	Window 1/Wooden Structure
Barge 3-B	White window glazing	Window 2/Wood Structure
Barge 4	Insulation Electrial Panel	Inside Wooden structure
Barge 5	Insulation inside metal structure	Inside Metal structure
Barge 6	Insulation inside conduit	Debris pile between the two structures

Barge 7	Insulation inside piping	Debris pile outside wooden structure
Barge 8	Flange gasket	Debris pile inside metal structure
Barge 9	Belt	Debris pile inside metal structure

Potential hazardous materials noted on the barge included flaking paint (potentially lead-based pait), broken light fixtures (PCB ballasts), and numerous small containters including aerosol cans.

Quality Control/Inspections Performed Took photos of work performed. See Photo log.Samples were collected inside 2 mil plastic baggies and placed in a FedEx box along with a signed Chain of Custody form on a 24 turn around time. The samples were shipped to CEI Labs in Cary,NC prioty overnight .

CLIENT PROJECT: Wynn Construction Oversight; 3651170065.0004.
CEI LAB CODE: A17-13298

Dear Customer:

Enclosed are asbestos analysis results for PLM Bulk samples received at our laboratory on September 19, 2017. The samples were analyzed for asbestos using polarizing light microscopy (PLM) per the EPA 600 Method.

Sample results containing >1% asbestos are considered asbestos-containing materials (ACMs) per EPA regulatory requirements. The detection limit for the EPA 600 Method is <1% asbestos by weight as determined by visual estimation.

Thank you for your business and we look forward to continuing good relations. If you have any questions, please feel free to call our office at 919-481-1413.

Kind Regards,

Tianbao Bai, Ph.D., CIH
Laboratory Director

REGULATORY LIMIT: >1% by weight

Due to the limitations of the EPA 600 method, nonfriable organically bound materials (NOBs) such as vinyl floor tiles can be difficult to analyze via polarized light microscopy (PLM). EPA recommends that all NOBs analyzed by PLM, and found not to contain asbestos, be further analyzed by Transmission Electron Microscopy (TEM). Please note that PLM analysis of dust and soil samples for asbestos is not covered under NVLAP accreditation. Estimated measurement of uncertainty is available on request.

This report relates only to the samples tested or analyzed and may not be reproduced, except in full, without written approval by CEI Labs, Inc. CEI Labs makes no warranty representation regarding the accuracy of client submitted information in preparing and presenting analytical results. Interpretation of the analytical results is the sole responsibility of the client. Samples were received in acceptable condition unless otherwise noted. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. Government.

☐ This job is being conducted under a Non Traditional Abatement Work Practice Permit.
MassDEP assigned Non Traditional Work Practice Authorization ID: _____

☐ This job does not require the use of an asbestos contractor licensed by the MA Department of Labor Standards because (please check one box below):

- ☐ This job involves breaking, shearing or slicing of non-friable asbestos-containing material only (e.g. cement shingles/panels, cement pipe, asphalt roofing or siding, vinyl floor tiles, etc.) in a manner that does not generate asbestos dust or render the material friable, as allowed by the Department of Labor Standards (DLS) at 453 CMR 6.13(2)(a)5. All work must be done in compliance with the applicable regulations at 310 CMR 7.15; or

- ☐ This job involves work on asbestos containing material that is classified by the Department of Labor Standards (DLS) as a 'Small-Scale Asbestos Project,' an 'Asbestos-Associated Project', or an 'Asbestos Response Action' by qualified 'in-house' personnel as allowed by the Department of Labor Standards (DLS) at 453 CMR 6.00, and will be performed in accordance with all the requirements of 453 CMR 6.13 (1)(a), 453 CMR 6.13 (2)(a)1. and 3., and 453 CMR 6.14 (1)(a), as applicable. All work must be done in compliance with the applicable regulations at 310 CMR 7.15.

☐ None of the above conditions apply, generate a new form.

Client: Amec Foster Wheeler	Site Location: 1 Horizon Way, Everett, MA
Work Area(s): Barge - Wooden Structure	Shift Times: 0700 - 1530
Project Monitor: Mark Jacobs (MJ)	Certification #: AM900522
Contractor: J.R Vinagro Corp. (JVC)	Supervisor: Julio Pantaleon (JP)

TIME	SITE NOTES / COMMENTS
0630	MJ arrives onsite and JVC is already onsite.
0636	MJ speaks with Greg Bashaw (GB) of SPS about loading equipment onto the boat and the times the boat will be picking up us off the barge later in the day. JVC and MJ are loading equipment on the boats and recieving life jackets that must be wore all day.
0658	SPS informs everyone the boats are ready to leave for the barge.
0713	We arrive at barge and unload equipment. MJ and JP walk the work area and discuss the work plan. MJ tells Dennis Quereux (DQ) the project manager for JVR that they need to change the notification and amend it to say "regulated area" instead of "Full containment" and that LBP is the project monitoring company onsite. Also change "3 stage decon" to "2 stage decon".
0726	JVC begins to set up regulated area around the wooden structure and small debris field around structure.

*MJ Checks all of the JVC workers paperwork and it is all up to date and they have a hard Copy of the notification onsite.

TIME	SITE NOTES / COMMENTS
0742	MJ calibrates 2 HV pumps at 5.42 LPM.
0750	JVC has completed setting up the regulated area and
	put on the Proper PPE to begin the clean up of the small
	debris field that has ACM roofing material throughout, they are
	utilizing hand tools and shovels to put debris into 2 6mil
	asbestos waste bags. They have adequate water is use
	from sub pump placed off the side of the bags in the water
	to reduce visible emmisons during the abatement activities.
0904	JVC continuing to bag up debris within the regulated area
	around the wooden structure. All workers are wearing Proper
	PPE and adequate amount of water during removal.
0911	DQ informs MJ the corrections have been made to the
	notification and it has been emailed to MJ. MJ forwards
	the amended notification to Matt Grove (MG) of Amec Foster
	Wheeler (AFW).
1045	JVC has finished cleaning up the debris field around
	the wooden structure and has started cleaning up the debris
	inside the wooden structure. 2 workers have got on ladders to
	start removing the roofing material that is ACM in whole Component
	utilizing hand tools.
1130	JVC takes a break for lunch.
1147	MJ post-calibrates 2 HV pumps at 5.42 LPM. MJ calibrates
	2 HV pumps at 5.42 LPM.
1150	JVC is back from lunch. The crew is continuing to remove the

Final Visual Inspection

Barge - Roofing Material and Window Glazing
1 Horizon Way
Everett, MA 02149

Dear Mr. Matt Grove,

On September 28 and 29, 2017, LBP Solutions, LLC (LBP) performed a visual inspection to determine the completion of asbestos removal activities. Removal activities involved the removal of asbestos containing roofing material and window glazing from the wooden structure on the barge. J. R. Vinagro Corporation Massachusetts Department of Labor Standards License # AC000837 conducted the abatement utilizing hand tools to remove the roofing material and the window glazing by whole component. Upon visual inspection of the work area, no evidence of visible debris was observed. Mr. Mark Jacobs of LBP, Massachusetts Department of Labor Standards License # AM900522, performed the visual inspection.

A copy of the visual inspection log is also attached.

LBP would like to thank you for the opportunity to have serviced Mr. Matt Grove's environmental testing needs. If you have any questions regarding the completed testing, please don't hesitate to call.

Sincerely,

Mark Jacobs

Mark Jacobs
Project Manager

Personnel on Site
Bowen Chen – Wynn

Work Performed
Arrived at 3 Charlton Street, Wynn Main offices, to meet with Bowen Chen (Wynn Rep) to escort me to the poly covered piping that was in question as possible ACM. There were three pieces of piping (covered upon arrival) which were inspected for possible ACM: a long intact pipe, a broken small piece of pipe, and a smaller tubular piece of piping. During inspection of the pipe, I noted a piece of timber that was extruding from the timber stockpile which appeared to have a fibrous coating which could be possible ACM. This prompted me to walk around the perimeter of the timber stockpile to determine if other similar timbers were present. Eighteen samples were collected for possible ACM with three representative samples of each material collected. No samples were taken from the smaller tubular piece of piping or other pieces of piping observed inside of the timber stockpile from the west side of the stockpile.

- Three samples were collected from outer insulation from the long intact pipe. Black insulted, tar material. ID = Black Outer Insulation Pipe- 1A, B, C.
- Three samples were collected inside of the broken small piece of pipe. Black insulted fibrous material. ID = Black Small Inner Pipe – 1A,B,C.
- Three samples were collected from a rubber flange from the broken small piece pipe. Black rubber flange. ID = Black Small Pipe Flange- 1, A, B, C.
- Three samples were collected from the extruding timber from the stockpile. Black insulted fibrous material. ID = Black Insulation Timber- 1A,B,C.
- Three samples were collected from material on the eastern side of the stockpile. Black insulated material. ID =Black Insulation Stockpile -1A, B, C.
- Three samples were collected from material on the northeastern side of the timber stockpile. Black Insulated material. ID = Black Insulation Stockpile- 2A, B, C.

Quality Control/Inspections Performed
Samples were placed in ziplock bags and labeled with date/time, sample ID, and Site location. All samples were placed under a chain of custody and delivered to ProScience Analytical Services in Woburn, MA at 12:37 in the afternoon with a less than 6 hour turnaround time (by 5 pm) with verbal confirmation of results.

PHOTO 2:
View of exposed piping inside stockpile on west side of the stockpile. Photo taken looking northeast.

PHOTO 3:
View of timber stockpile looking west.

PHOTO 4:
View of possible ACM (circled in red) inside stockpile on eastern side of stockpile. Sample ID = Black Insulation Stockpile - 1A, B, C.
[Image Wynn Construction_100917 (12). View of Possible ACM collected inside Stockpile on Eastern Side of Stockpile.}

PHOTO 5:
Close up view of material identified as "Black Insulation Stockpile – 1".

PHOTO 6:
View of possible ACM (circled in red) observed on the northeast portion of timber stockpile. Sample ID Black Insulation Stockpile-2A, B, C.

PHOTO 7:
View of smaller broken pipe looking west**.**

PHOTO 8:
View of inner insulation inside smaller broken pipe. Sample ID = Black Small Inner Pipe – 1A,B,C.

PHOTO 9:
Close-up view of black insulation inside smaller broken pipe. Sample ID = Black Small Inner Pipe-1A.

PHOTO 10:
View of suspect ACM insulation on timber in stockpile adjacent to pipe.

PHOTO 11:
Close-up view of suspect ACM insulation. Sample ID =Black Insulation Timber – 1.

PHOTO 12:
View of long intact pipe. Possible ACM samples collected from outer insulation. Sample ID = Black Outer Insulation Pipe-1A, B, C.

PHOTO 13:
View of rubber flange inside small broken pipe which was suspect ACM. Sample ID = Black Small Pipe Flange- 1, A, B, C.

PHOTO 14:
View of smaller tubular pipe. No suspect ACM identified or sampled.

ProScience Analytical Services, Inc

Matt Grove
AMEC Foster Wheeler Environment &
Infrastructure, Inc.
271 Mill Rd.
Chelmsford, MA 01824

October 09, 2017

Dear Matt Grove,

The enclosed analytical results have been obtained by using EPA 600/R-93/116 or EPA 600/M4-82-020. Calibrated Visual Estimate (CVE) is used by ProScience for the determination of the percentage of asbestos and other components in the sample. Point Counting is recommended when the sample contains less than 10% asbestos by CVE. Friable materials found to be less than 1% by CVE are automatically point counted (400 points) at no additional charge. ProScience recommends further analysis by a gravimetric method for non-friable materials that are less than 1% by CVE.

The Quality Control data related to the samples analyzed is available upon client's written request. ProScience Analytical Services Inc., assumes no responsibility for potential sample contamination that may have occurred during the sample collection process or erroneous data provided by the client.

The enclosed results may not be used under any circumstances as product endorsement by any US government agency including NIST/NVLAP.

All Laboratory records are retained for at least three years unless otherwise directed in writing by the client. The actual samples are retained for a period of two months and written request is necessary in order to be retained for a longer period of time. All analytical results and records are considered strictly confidential and will not be released under any circumstances to anyone except the actual client. The analytical results included in this report apply only to the items tested.

If you have any questions please contact the Laboratory Manager or the Laboratory Director.

Sincerely,

Patricia Weakley

Patricia Weakley, Optical Asbestos Manager

Aimee Cormier, Laboratory Director

BILL OF LADING (pursuant to 310 CMR 40.0030)

BWSC 112

Release Tracking Number
3 - 13341

A. LOCATION OF SITE OR DISPOSAL SITE WHERE REMEDIATION WASTE WAS GENERATED:

1. Release Name/Location Aid: EVERETT STAGING YARD
2. Street Address: 1 HORIZON WAY
3. City/Town: EVERETT 4. Zip Code: 021490000

☑ 5. Check here if the disposal site that is the source of the release is Tier Classified. Check the current Tier Classification Category.
☐ a. Tier I ☐ b. Tier ID ☑ c. Tier II

B. THIS FORM IS BEING USED TO: (check one: B1-B4):

☐ 1. Submit a **Bill of Lading (BOL)** to transport Remediation Waste to Temporary Storage or a Receiving Facility. Response Actions associated with this BOL (check all that apply):

- ☐ a. Immediate Response Action (IRA)
- ☐ b. Release Abatement Measure (RAM)
- ☐ c. Downgradient Property Status (DPS)
- ☐ d. Utility Release Abatement Measure (URAM)
- ☐ e. Comprehensive Response Actions
- ☐ f. Limited Removal Action (LRA): (must be retained pursuant to 310 CMR 40.0034(6); can't be submitted via eDEP)
- ☐ g. Other _____

☐ 2. Submit an Attestation of Completion of **Shipment to Temporary Storage** (Sections C, F and J are not required):
☑ 3. Submit an Attestation of **Completion of Shipment to a Receiving Facility** (Sections C, F and J are not required):
☐ 4. Certify that Remediation Waste Was **Not Shipped, and the Bill of Lading is Void**. (Sections C, D, E, and F are not required)

5. Date Bill of Lading submitted to the Department: 10/23/2017 (mm/dd/yyyy) b. eDEP Transaction ID: 965815

6. Period of Generation Associated with this Bill of Lading 10/16/2017 (mm/dd/yyyy) to 1/22/2018 (mm/dd/yyyy)

(All sections of this transmittal form must be filled out unless otherwise noted above)

The Bill of Lading is not considered complete until the Attestation of Completion of Shipment is received by the Department.

C. DESCRIPTION OF WASTE AND WASTE SOURCE:

1. Contaminated Media/Debris (check all that apply):

☐ a. Soil ☐ b. Groundwater ☐ c. Surface Water ☐ d. Sediment ☐ e. Vegetation or Organic Debris

☐ f. Demolition/Construction Waste ☐ g. Inorganic Absorbent Materials ☐ h. Other: _____

2. Uncontainerized Waste (check all that apply):

☐ a. Inorganic Absorbent Materials ☐ b. Other: _____

C. DESCRIPTION OF WASTE AND WASTE SOURCE (cont.):

3. Containerized Waste (check all that apply):

☐ a. Tank Bottoms/Sludges ☐ b. Containers ☐ c. Drums ☐ d. Engineered Impoundments

☐ e. Other: _____

4. Estimated Quantity: _____ ☐ Tons ☐ Cu. Yds. ☐ Gallons

5. Contaminant Source (check one):

☐ a. Transportation Accident ☐ b. Underground Storage Tank ☐ c. Brownfields Redevelopment

☐ d. Other: _____

6. Type of Contaminant (check all that apply):

☐ a. Gasoline ☐ b. Diesel Fuel ☐ c. #2 Fuel Oil ☐ d. #4 Fuel Oil ☐ e. #6 Fuel Oil ☐ f. Jet Fuel

☐ g. Waste Oil ☐ h. Kerosene ☐ i. Chlorinated Solvents ☐ j. Urban Fill ☐ k. Other: _____

7. Constituents of Concern (check all that apply):

☐ a. As ☐ b. Cd ☐ c. Cr ☐ d. Pb ☐ e. Hg ☐ f. EPH/TPH ☐ g. VPH

☐ h. PCBs ☐ i. VOCs ☐ j. SVOCs ☐ k. Other: _____

8. If applicable, check the box for the Reportable Concentration Category of the site:

☐ a. RCS-1 ☐ b. RCS-2 ☐ c. RCGW-1 ☐ d. RCGW-2

9. Remediation Waste Characterization Documentation (check at least one):

☐ a. Site History Information ☐ b. Sampling Analytical Methods and Procedures ☐ c. Laboratory Data

☐ d. Field Screening Data ☐ e. Characterization Documentation previously submitted to the Department

i. Date submitted: _____ (mm/dd/yyyy) ii. Type of Documentation: _____

D. TRANSPORTER OR COMMON CARRIER INFORMATION:

A. LOCATION OF SITE OR DISPOSAL SITE WHERE REMEDIATION WASTE WAS GENERATED:

1. Release Name/Location Aid: EVERETT STAGING YARD
2. Street Address: 1 HORIZON WAY
3. City/Town: EVERETT 4. Zip Code: 021490000

☑ 5. Check here if the disposal site that is the source of the release is Tier Classified. Check the current Tier Classification Category.
☐ a. Tier I ☐ b. Tier ID ☑ c. Tier II

B. THIS FORM IS BEING USED TO: (check one: B1-B4):

☐ 1. Submit a **Bill of Lading (BOL)** to transport Remediation Waste to Temporary Storage or a Receiving Facility. Response Actions associated with this BOL (check all that apply):

- ☐ a. Immediate Response Action (IRA)
- ☐ b. Release Abatement Measure (RAM)
- ☐ c. Downgradient Property Status (DPS)
- ☐ d. Utility Release Abatement Measure (URAM)
- ☐ e. Comprehensive Response Actions
- ☐ f. Limited Removal Action (LRA): (must be retained pursuant to 310 CMR 40.0034(6); can't be submitted via eDEP)
- ☐ g. Other

☐ 2. Submit an Attestation of Completion of **Shipment to Temporary Storage** (Sections C, F and J are not required):
☑ 3. Submit an Attestation of **Completion of Shipment to a Receiving Facility** (Sections C, F and J are not required):
☐ 4. Certify that Remediation Waste Was **Not Shipped, and the Bill of Lading is Void**. (Sections C, D, E, and F are not required)

5. Date Bill of Lading submitted to the Department: 11/8/2017 (mm/dd/yyyy) b. eDEP Transaction ID: 969559

6. Period of Generation Associated with this Bill of Lading 10/16/2017 (mm/dd/yyyy) to 3/20/2018 (mm/dd/yyyy)

(All sections of this transmittal form must be filled out unless otherwise noted above)

The Bill of Lading is not considered complete until the Attestation of Completion of Shipment is received by the Department.

C. DESCRIPTION OF WASTE AND WASTE SOURCE:

1. Contaminated Media/Debris (check all that apply):

☐ a. Soil ☐ b. Groundwater ☐ c. Surface Water ☐ d. Sediment ☐ e. Vegetation or Organic Debris

☐ f. Demolition/Construction Waste ☐ g. Inorganic Absorbent Materials ☐ h. Other:

2. Uncontainerized Waste (check all that apply):

☐ a. Inorganic Absorbent Materials ☐ b. Other:

A. LOCATION OF SITE OR DISPOSAL SITE WHERE REMEDIATION WASTE WAS GENERATED:

1. Release Name/Location Aid: EVERETT STAGING YARD
2. Street Address: 1 HORIZON WAY
3. City/Town: EVERETT 4. Zip Code: 021490000

☑ 5. Check here if the disposal site that is the source of the release is Tier Classified. Check the current Tier Classification Category.
☐ a. Tier I ☐ b. Tier ID ☑ c. Tier II

B. THIS FORM IS BEING USED TO: (check one: B1-B4):

☐ 1. Submit a **Bill of Lading (BOL)** to transport Remediation Waste to Temporary Storage or a Receiving Facility.
Response Actions associated with this BOL (check all that apply):

☐ a. Immediate Response Action (IRA)
☐ b. Release Abatement Measure (RAM)
☐ c. Downgradient Property Status (DPS)
☐ d. Utility Release Abatement Measure (URAM)
☐ e. Comprehensive Response Actions
☐ f. Limited Removal Action (LRA): (must be retained pursuant to 310 CMR 40.0034(6); can't be submitted via eDEP)
☐ g. Other

☐ 2. Submit an Attestation of Completion of **Shipment to Temporary Storage** (Sections C, F and J are not required):
☑ 3. Submit an Attestation of **Completion of Shipment to a Receiving Facility** (Sections C, F and J are not required):
☐ 4. Certify that Remediation Waste Was **Not Shipped, and the Bill of Lading is Void**. (Sections C, D, E, and F are not required)

5. Date Bill of Lading submitted to the Department: 10/13/2017 (mm/dd/yyyy) b. eDEP Transaction ID: 961891

6. Period of Generation Associated with this Bill of Lading 10/16/2017 (mm/dd/yyyy) to 1/22/2018 (mm/dd/yyyy)

(All sections of this transmittal form must be filled out unless otherwise noted above)

The Bill of Lading is not considered complete until the Attestation of Completion of Shipment is received by the Department.

C. DESCRIPTION OF WASTE AND WASTE SOURCE:

1. Contaminated Media/Debris (check all that apply):

☐ a. Soil ☐ b. Groundwater ☐ c. Surface Water ☐ d. Sediment ☐ e. Vegetation or Organic Debris

☐ f. Demolition/Construction Waste ☐ g. Inorganic Absorbent Materials ☐ h. Other:

2. Uncontainerized Waste (check all that apply):

☐ a. Inorganic Absorbent Materials ☐ b. Other:

C. DESCRIPTION OF WASTE AND WASTE SOURCE (cont.):

3. Containerized Waste (check all that apply):

☐ a. Tank Bottoms/Sludges ☐ b. Containers ☐ c. Drums ☐ d. Engineered Impoundments

☐ e. Other: _____

4. Estimated Quantity: _____ ☐ Tons ☐ Cu. Yds. ☐ Gallons

5. Contaminant Source (check one):

☐ a. Transportation Accident ☐ b. Underground Storage Tank ☐ c. Brownfields Redevelopment

☐ d. Other: _____

6. Type of Contaminant (check all that apply):

☐ a. Gasoline ☐ b. Diesel Fuel ☐ c. #2 Fuel Oil ☐ d. #4 Fuel Oil ☐ e. #6 Fuel Oil ☐ f. Jet Fuel

☐ g. Waste Oil ☐ h. Kerosene ☐ i. Chlorinated Solvents ☐ j. Urban Fill ☐ k. Other: _____

7. Constituents of Concern (check all that apply):

☐ a. As ☐ b. Cd ☐ c. Cr ☐ d. Pb ☐ e. Hg ☐ f. EPH/TPH ☐ g. VPH

☐ h. PCBs ☐ i. VOCs ☐ j. SVOCs ☐ k. Other: _____

8. If applicable, check the box for the Reportable Concentration Category of the site:

☐ a. RCS-1 ☐ b. RCS-2 ☐ c. RCGW-1 ☐ d. RCGW-2

9. Remediation Waste Characterization Documentation (check at least one):

☐ a. Site History Information ☐ b. Sampling Analytical Methods and Procedures ☐ c. Laboratory Data

☐ d. Field Screening Data ☐ e. Characterization Documentation previously submitted to the Department

i. Date submitted: _____ (mm/dd/yyyy) ii. Type of Documentation: _____

D. TRANSPORTER OR COMMON CARRIER INFORMATION:

1. Transporter/Common Carrier Name: PC TRUCKING, INC.

2. Contact First Name: JOYCE 3. Last Name: POLCARO

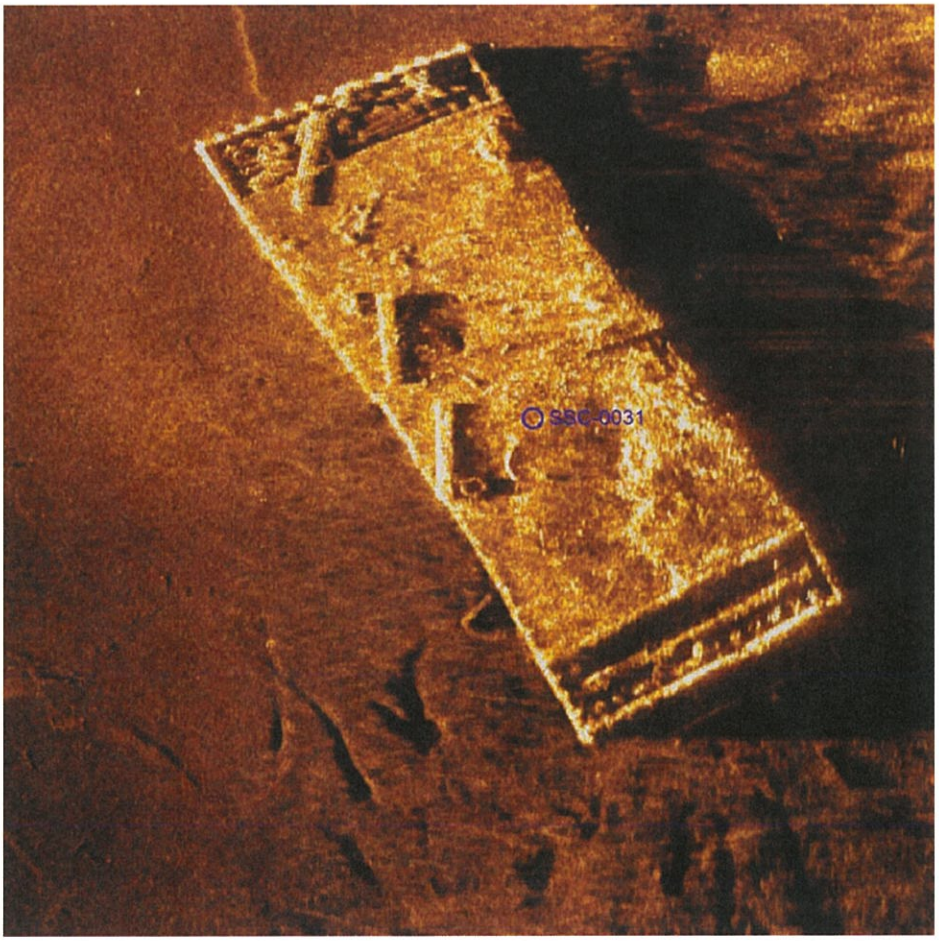
Wynn Boston Harbor Sediment Remediation Debris Survey

Debris Targets Report

Steele Associates Marine Consultants, LLC.



Wynn Boston Harbor Sediment Remediation Debris Survey

Background

Wynn Boston Harbor sits on the former Monsanto Chemical Plant. The Monsanto plant operated a ship terminal to onload/offload in proximity to the proposed berth set to be dredged. This terminal no longer exists and has been demolished but parts of the dolphin's foundations that were used to berth ships are still existing based on the debris survey in proximity to the dredge area. Many of the targets identified in the side scan survey are believed to be associated with the razed dolphins from the Monsanto ship terminal. Throughout the years it is certain that additional debris has accumulated throughout the project area. To determine the extent of the debris Wynn Charter has requested a debris survey to identify debris targets of interest.

Wynn Boston Harbor Sediment Remediation Debris Survey

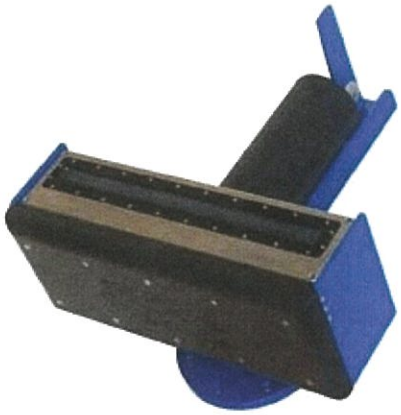
Data Collection

Steele Associates conducted the Before Dredge survey according to Army Corps specification with a 200 kHz multi-beam survey of the project area. A 900 kHz side scan survey was collected for the purpose of locating, identifying, measuring, and imaging of debris targets, in addition the 200 kHz multi-beam survey data aided to confirm the side scan imagery.

Equipment

An R2Sonic 2024 Mulit-Beam Sonar was used to collect the Before Dredge survey at 200 kHz.



An Edgetech 4125 Side Scan Sonar was used to collect the side scan sonar survey at 900 kHz for the Debris survey.

RE: Non-Traditional Asbestos Abatement Work Plan— Wynn Boston Harbor Sediment Disposal (EH&E 21802)

To Whom It May Concern:

On behalf of Wynn MA, LLC, Environmental Health & Engineering, Inc. (EH&E) prepared this non-traditional asbestos abatement work plan (NT Plan) describing the measures to be implemented for bulk loading, packaging, transport, and offsite disposal of sediment that is an asbestos-contaminated waste material (ACWM) at the Wynn Boston Harbor development project (the Project) located at 1 Horizon Way in Everett, Massachusetts. Project activities are also subject to the provisions of the Phase IV Remedy Implementation Plan for RTN 3-0013341.

1) DOCUMENTATION AND RESPONSIBILITIES

Massachusetts Department of Environmental Protection (MassDEP) Form AQ 36 *Application for Non-Traditional Asbestos Abatement Work Practice Approval* is being submitted with this plan along with the $600 fee (copies in Appendix A). After approval of this NT Plan, the contractor will file Asbestos Notification Form ANF-001 to the MassDEP Northeastern Regional Office (NERO) Asbestos Program. The following entities have responsibility under this plan:

- Charter Contracting Company, LLC. (Charter), who is a Massachusetts licensed asbestos abatement contractor, will perform all asbestos-related work under this NT Plan, including hauling the waste to the disposal facility. Charter is subcontracted to SPS New England, Inc.

- Massachusetts licensed asbestos project monitors from LBP Solutions, LLC (LBP) will provide perimeter air sampling and visual inspections required by this plan.

- The disposal facility will be Waste Management Turnkey (Rochester, New Hampshire) or Waste Management Crossroads Landfill (Norridgewock, Maine).

2) MATERIALS MANAGED

The volume of ACWM to be handled under this NT Plan is 25 cubic yards (CY) and consists of sediment containing less than 1% asbestos. Charter performed precharacterization sampling in locations of the site where sediment removal was planned for the Project, including collecting samples for asbestos analysis in 84 locations shown in the first figure of Appendix B. No asbestos was detected in any of these samples, except one from Grid 46, which had a result of <1% asbestos. Charter subsequently sampled sediment corresponding to a volume of 25 CY to the depth of planned dredging at four locations around the <1% asbestos sample as shown in the second figure in Appendix B. No asbestos was detected in any of the four delineation samples. Sediment within the bounds of these four samples is assumed to be ACWM and will be disposed of under this NT Plan. All asbestos in sediment laboratory results are included in Appendix C.

3) SEQUENCE OF WORK

All ACWM activities will occur on a deck barge at the dredging site for the Project shown in Appendix D. All ACWM sediment will be disposed of offsite in accordance with this NT Plan; with any additional conditions required in the MassDEP approval of this NT Plan; with packaging, transport, storage, disposal, and waste shipment record requirements for ACWMs outlined in 310 CMR 7.15 (15-18); and with other applicable federal, state, and local requirements. All work will also be conducted in accordance with the contractor's site-specific health and safety plan (HASP). The sequence of work will be:

- Prepare deck barge with perimeter berm covered with polyethylene sheeting or an equivalent impervious material.

- Restrict access to contractor personnel who are appropriately trained and qualified in accordance with the contractor HASP.

- As detailed in Section 4, the following will occur on the deck barge:

  - Excavate the ACWM sediment directly into leak-tight dewatering boxes.
  - Dewater the sediment in the boxes through 5-micron filters.
  - If needed, amend sediment that cannot be dewatered enough with Portland cement to meet disposal facility requirements.

- Implement dust control measures in accordance with Section 5.

- After dewatering, package, transport, and dispose of ACWM in accordance with Section 6.

- Decontaminate equipment and dewatering boxes on the barge in accordance with Section 7.

- Collect perimeter air samples around all sediment excavation, cement mixing, and dewatering box decontamination operations in accordance with Section 8.

- Stop work in the applicable work zone and notify MassDEP immediately if ACWM work activities generate visible dust or if monitoring results meet or exceed the airborne fiber levels described in Section 8 below.

- Following work, inspect areas in accordance with the completion criteria in Section 9.

4) SEDIMENT EXCAVATION AND DEWATERING

The contractor will excavate the specified ACWM with a mechanical dredge equipped with an environmental clam bucket. In addition to the mechanical dredge plant, a barge based water treatment system, a push boat, and deck barge with leak-tight dewatering boxes will be onsite to support the dredge. All dredging will be conducted in a permeable turbidity curtain and sorbent boom. The location and layout of the deck barge is shown in Appendix E.

The deck barge will have a perimeter berm and be covered with polyethylene sheeting or an equivalent impervious material on the deck below prior to the boxes being filled with sediment. The sediment will be excavated into leak-tight 25 CY dewatering boxes with dimensions of a standard roll-off, lined with 400-micron filter fabric detailed in Appendix F. Although it is expected that two dewatering boxes will be adequate, up to five boxes will be available if additional capacity is needed, depending on the moisture content of the sediment.

The dredge will place each bucket of sediment directly into the dewatering boxes, which will be immediately closed after being filled and fully water-tight. As each box is filled, pumping systems will be attached to drains on each box to send the liquid through a dedicated 5-micron filter system on the deck barge. After passing through the 5-micron filter, the water will travel to the full water treatment system detailed in Appendix G to ultimately be discharged within the turbidity curtain onsite.

All ACWM must be free of standing water and pass a paint filter test prior to offsite disposal. Although it is expected that the dewatering boxes will be effective enough, sediment that cannot be drained of free-standing liquid will be amended to meet the requirements of the disposal facility. To achieve these results, Portland cement will be mixed into the dewatering boxes on the deck barge. An excavator with a mixing head will be utilized to mix the cement into each box. After mixing, each box will be closed while the cement cures for approximately 24 hours. Once acceptable for transport and disposal, the boxes will be packaged, transported and disposed in accordance with Section 6. Additionally, all PPE, liners, filter bags, polyethylene sheeting, and other contaminated materials will be disposed as ACWM with the sediment.

5) DUST CONTROL

Dust control will be implemented by the contractor during all ACWM operations. Visible dust emissions from ACWM work will not be allowed. The contractor will provide necessary measures to control the generation of dust from activities and to prevent visible dust emissions. Dust suppression techniques such as wetting, misting, and ensuring the material is damp will be employed as necessary to control dust levels. While being dewatered, each ACWM box will be designated as containing ACWM and maintained closed and sealed.

Work will be temporarily halted, MassDEP will be notified immediately, and dust suppression techniques will be modified or enhanced if onsite ACWM work activities generate visible dust. Visible emissions from non-suspect sources such as vehicle exhausts, dust from uncontaminated construction areas, pollen, etc. will not be considered cause for work stoppage.

6) PACKAGING, TRANSPORT, AND DISPOSAL

After being filled to acceptable load capacity, dewatered, and in an acceptable condition for the disposal facility, the contractor will clean exterior surfaces of the sealed dewatering boxes and the deck barge, if needed, until they are visually clean. LBP will visually inspect the work area and boxes in accordance with Section 9. The barge will then be taken to the bulkhead site shown in Appendix D and the boxes will be transported to the disposal facility.

A DOT licensed hauler will transport and dispose of the waste at a landfill permitted to accept asbestos waste. The trucks used for the transport of ACWM must be in good condition. Each truck will display the orange placard indicating the transport of asbestos-containing materials (Special Waste). With each shipment of waste, the contractor will complete a waste shipment record (WSR) with all information required by 40 CFR 61.149 and 310 CMR 7.15(18). All packaged waste materials will include warning labels, waste generator labels, and waste shipment records with all information required by MassDEP, U.S. Environmental Protection Agency (EPA), U.S. Occupational Health and Safety Administration (OSHA), and U.S. Department of Transportation (DOT). Class 9 placards (2212) shall be affixed to all exterior sides of each box while onsite, and must remain affixed to the dumpster until the ACWM has been removed from the bin at the receiving facility. Labels shall be printed in letters of sufficient size and contrast so as to be readily visible and legible.

The contractor will dispose of all ACWM generated during the Project in a landfill permitted to accept ACWM. The facility will be Waste Management Turnkey Landfill (Rochester, New Hampshire) or Waste Management Crossroads Landfill (Norridgewock, Maine). The contractor will provide the owner with Waste Shipment Records within 30 days following waste disposal. The contractor shall also submit copies of WSRs to MassDEP NERO on a daily basis via NERO.asbestos@state.ma.us.

After the ACWM is dumped at the disposal facility, the boxes will be closed/sealed and transported back to the Wynn site for decontamination as discussed below.

7) DECONTAMINATION

Each piece of equipment that contacts ACWM will be decontaminated on the deck barge by washing with water. All decontamination water will be treated through a 5-micron filter and full treatment system. The following will be decontaminated prior to use on other parts of the site:

- Dredge bucket
- Filter skid (filters themselves will be disposed of as ACWM waste)
- Mixing head

The sealed/closed dewatering boxes will be returned to the site and be decontaminated. The boxes will be decontaminated by washing with water on the deck barge, with wash water collected and treated through the 5-micron filter and full treatment system.

8) PERIMETER ASBESTOS MONITORING

LBP will collect air samples around the perimeter of each active ACWM zone, including during excavation, mixing with Portland cement (if needed), and dewatering box decontamination:

- Area air samples will be collected in at least four locations around each ACWM operation. High flow pumps will be used to collect air samples with sufficient air volumes to achieve detection limits below 0.010 fibers per cubic centimeter (f/cc). During full workdays, two sets of samples will be collected around each location: one set for approximately half of the workday (morning) and a second set for the remainder of the workday (afternoon).

- Samples will be analyzed for total airborne fibers, using Phase Contrast Microscopy (PCM) on an immediate basis. Results from the first set of samples will be available quickly enough that corrective actions, if warranted, can be implemented the same workday. Results from the second set will be available such that corrective actions, if warranted, can be implemented by the morning of the next workday.

- Any individual perimeter air sampling result that meets or exceeds 0.010 f/cc potentially related to Project ACWM work will result in immediate:

  - Stoppage of ACWM work in the applicable work zone,
  - Notification to the MassDEP NERO Asbestos Program, and
  - Reevaluation and improvement of work practices, engineering controls, and dust/fiber suppression methods, if warranted.

- Air sampling results will also be provided on a daily basis to the MassDEP NERO Asbestos Program at NERO.asbestos@state.ma.us.

- Air samples will be collected and analyzed onsite by LBP using PCM in accordance with National Institute for Occupational Safety and Health (NIOSH) Method 7400.

9) COMPLETION CRITERIA AND FINAL INSPECTIONS

Visual inspection will be used to evaluate completion of NT Plan activities for the Project. LBP representatives will inspect each work area and deem ACWM operations complete when:

- All ACWMs covered by the plan have been removed.

- All equipment has been adequately decontaminated in accordance with this NT Plan and is visually clean and free of ACWMs.

- Exterior surfaces of the dewatering boxes and the deck barge are visually clean and free of ACWMs before being removed from the barge for transport to the disposal facility.

- Exterior surfaces of the dewatering boxes, interior surfaces of the dewatering boxes, and the deck barge are visually clean and free of ACWMs after being decontaminated.

- All work areas are visibly clean and free of ACWMs.

If you have any questions, please feel free to contact us at 1-800-TALK-EHE (1-800-825-5343).

Circumstances – Check the appropriate box(es) to indicate why a Non-Traditional Asbestos Abatement Work Practice Approval is needed.

☐ Facility is being demolished under a state or local government order because it is structurally unsound and in danger of imminent collapse. (Please attach a copy of the order to your work plan proposal.)

☐ Asbestos Containing Material (ACM) or Asbestos Containing Waste Material (ACWM) was not accessible for testing, therefore not discovered until after demolition began and, as a result of the demoltion, cannot be safely removed.

☐ Abatement activity is being conducted as part of an emergency renovation operation.

☐ Asbestos abatement activity is being conducted to clean up and decontaminate a facility or portion of a facility where:

- ☐ Previous asbestos abatement activities were not conducted in compliance with 310 CMR 7.15, or
- ☐ ACM deterioration, if not immediately attended to, would present a safety or public health hazard.

☐ Wetting during a facility renovation would unavoidably damage equipment or present a safety hazard.

☒ The project requires bulk loading of ACM and/or ACWM.

List the requirements of 310 CMR 7.15 that you are unable to comply with and explain why:

Asbestos contaminated sediment will be bulk loaded for offsite disposal. Please see atatched Non-Traditional Asbestos Abatement Work Plan

Other Project Details

Project Start Date: 11/10/2017 (MM/DD/YYYY) | Project End Date: 11/20/2017 (MM/DD/YYYY)

Types & Amounts of ACM and/or ACWM Requiring Non-Traditional Asbestos Abatement Work Practice(s):

☒ Friable: 25 CY (Quantity in Cubic Meters (Cubic Yards)) | ☐ Non-Friable: (Quantity in Cubic Meters (Cubic Yards))

Location(s) of ACM in the Facility:

Asbestos contaminated sediment

D. Submission of Application

Note: MassDEP review will begin only after your submissions have been received at both locations.

STEP 1: Submit Application

Send the following materials to the appropriate MassDEP Regional Office*, Attention: Asbestos Section:

☒ This original completed and signed form.

☒ A copy of the check or money order from Step 1.

☒ Your proposed work plan, describing work practices, duration and schedule. The proposal must:
- Include signature of the Asbestos Project Designer who prepared it.
- Demonstrate that the deviations from 310 CMR 7.15 and alternatives proposed will not cause any visible emissions to the outside air or pose significant risk to public health, safety or the environment.

☒ All supporting documentation.

*Find the MassDEP Regional Office for the community where this work will be done: http://www.mass.gov/eea/agencies/massdep/about/contacts/

STEP 2: Submit Fee Payment

Send the materials below to this address:

MassDEP
P.O. Box 4062
Boston, MA 02211

☒ A copy of this completed and signed form.

☒ Fee payment of $600* (check or money order payable to "Commonwealth of Massachusetts").

*The following entities are exempt from this fee:
- Cities, towns, counties or districts of the Commonwealth
- Federally recognized Indian tribe housing authorities
- Municipal housing authorities
- The Massachusetts Bay Transportation Authority (MBTA)

Is this a fee-exempt project? ☐ Yes ☒ No

NOTE: Entities that are exempt from the fee must still submit a copy of this completed and signed form, without payment, to the P.O. box above.

APPENDIX C
ASBESTOS LABORATORY TEST RESULTS

September 27, 2017

AMEC Foster Wheeler
271 Mill Road
Chelmsford, MA 01824

CLIENT PROJECT: Wynn Sediment Remediation; 3651170065
CEI LAB CODE: A17-13718

Dear Customer:

Enclosed are asbestos analysis results for PLM Bulk samples received at our laboratory on September 27, 2017. The samples were analyzed for asbestos using polarizing light microscopy (PLM) per the EPA 600 Method.

Sample results containing >1% asbestos are considered asbestos-containing materials (ACMs) per EPA regulatory requirements. The detection limit for the EPA 600 Method is <1% asbestos by weight as determined by visual estimation.

Thank you for your business and we look forward to continuing good relations. If you have any questions, please feel free to call our office at 919-481-1413.

Kind Regards,

Tianbao Bai, Ph.D., CIH
Laboratory Director

REPORTING LIMIT FOR POINT COUNTS: 0.25% by 400 Points or 0.1% by 1,000 Points

REGULATORY LIMIT: >1% by weight

Due to the limitations of the EPA 600 method, nonfriable organically bound materials (NOBs) such as vinyl floor tiles can be difficult to analyze via polarized light microscopy (PLM). EPA recommends that all NOBs analyzed by PLM, and found not to contain asbestos, be further analyzed by Transmission Electron Microscopy (TEM). Please note that PLM analysis of dust and soil samples for asbestos is not covered under NVLAP accreditation. Estimated measurement of uncertainty is available on request.

This report relates only to the samples tested or analyzed and may not be reproduced, except in full, without written approval by CEI Labs, Inc. CEI Labs makes no warranty representation regarding the accuracy of client submitted information in preparing and presenting analytical results. Interpretation of the analytical results is the sole responsibility of the client. Samples were received in acceptable condition unless otherwise noted. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. Government.

ANALYST: Gary A. Swanson

CLIENT PROJECT: Wynn Sediment Remediation; 3651170065
CEI LAB CODE: A17-14869

Dear Customer:

Enclosed are asbestos analysis results for PLM Bulk samples received at our laboratory on October 20, 2017. The samples were analyzed for asbestos using polarizing light microscopy (PLM) per the EPA 600 Method.

Sample results containing >1% asbestos are considered asbestos-containing materials (ACMs) per EPA regulatory requirements. The detection limit for the EPA 600 Method is <1% asbestos by weight as determined by visual estimation.

Thank you for your business and we look forward to continuing good relations. If you have any questions, please feel free to call our office at 919-481-1413.

Kind Regards,

Tianbao Bai, Ph.D., CIH
Laboratory Director

Due to the limitations of the EPA 600 method, nonfriable organically bound materials (NOBs) such as vinyl floor tiles can be difficult to analyze via polarized light microscopy (PLM). EPA recommends that all NOBs analyzed by PLM, and found not to contain asbestos, be further analyzed by Transmission Electron Microscopy (TEM). Please note that PLM analysis of dust and soil samples for asbestos is not covered under NVLAP accreditation. Estimated measurement of uncertainty is available on request.

This report relates only to the samples tested or analyzed and may not be reproduced, except in full, without written approval by CEI Labs, Inc. CEI Labs makes no warranty representation regarding the accuracy of client submitted information in preparing and presenting analytical results. Interpretation of the analytical results is the sole responsibility of the client. Samples were received in acceptable condition unless otherwise noted. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. Government.

Dewatering Box Layout
Wynn Dredge
Everett, Massachusetts

Bolted-in perforated basket for easy removal

25 Yard Dewatering Box

with Steel Hard Top

(Available in select locations)

Capacity: 25 yd
Height: 6' 6"
Width: 8' 6"
Length: 23'
Tare Weight: 9,000 lbs

All sizes are approximate

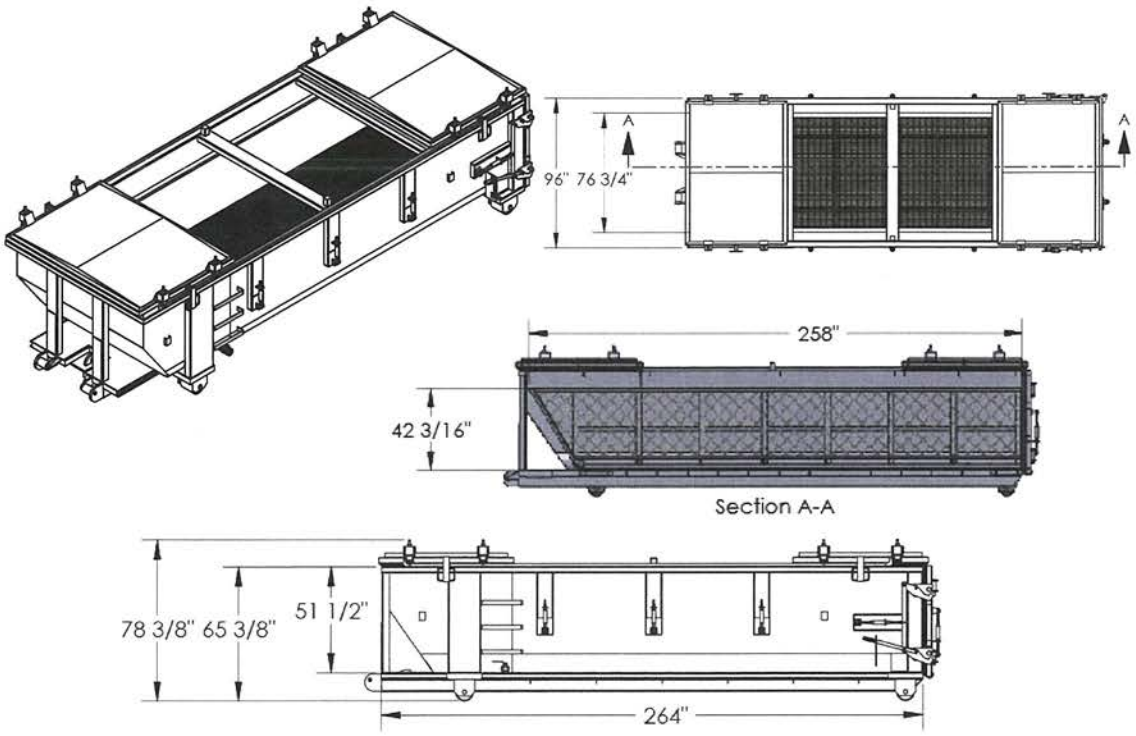
At Adler Tank Rentals, we are committed to providing safe and reliable containment solutions for all types of applications where performance matters.

Fitted with a bolted-in, easily removed perforated basket, the 25 Yard Dewatering Box with Steel Hard Top is designed for convenient use and easy cleaning. Featuring a fully gasketed waterproof door, valved drains and a variety of fabric filter liner options, this product is topped with a hard steel top to protect the contents from unwanted debris, precipitation and visibility.

Mechanical Features

- Sliding split roof lid equipped with ratcheting binders to lock in place
- 4" Drains
- Standard roll-off container with hard steel top
- Horizontal swinging, fully gasketed, watertight door with no crossbar to trap debris when dumping
- Bolted-in perforated basket for easy removal to assist in cleaning
- Compatible with standard roll-off frame truck
- Watertight gasketed rear door

25 Yard Dewatering Box with Steel Hard Top



Options

- Nominal 100 micron geotextile fabric filter liners, individually packaged and fitted for rapid installation
- 250 micron synthetic fabric filter liners, individually packaged and fitted for rapid installation
- 400 micron synthetic fabric filter liners, individually packaged and fitted for rapid installation

Comprehensive Service

Adler Tank Rentals provides containment solutions for hazardous and non-hazardous liquids and solids. We offer 24-hour emergency service, expert planning assistance, transportation, repair and cleaning services. All of our rental equipment is serviced by experienced Adler technicians and tested to exceed even the most stringent industry standards.

APPENDIX G
WATER TREATMENT SYSTEM DESCRIPTION

NOTE: All water pumped from ACWM bins and/or used for ACWM decontamination will pass through a 5-micron filter before being treated with the system described below.

Description of Water Treatment System

All water generated from the dredge will be routed to the water treatment system located on a barge adjacent to the hopper barge. The anticipated wastewater will derive from the mechanical dredging decant. During dredging activities, the contractor will pump the decanted water from the hopper barge to the treatment system. The maximum influent flow rate will not exceed 250 gallons per minute (gpm). The primary contaminants of concern in the waste stream include total suspended solids (TSS), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs).

The treatment system is capable of treating a waste stream of up to 250 gpm and begins with two (2) 18,000-gallon weir tanks in parallel. Water in the weir tanks will flow, via gravity, into two (2) 10,000-gallon clarifiers in parallel. Two chemical additions; LRT-E-50 Coagulant and LRT-800 Series Flocculant will be added to aid in the settling process. The coagulant will be injected into the influent stream prior to entering the weir tanks for rapid mixing while the flocculant will be injected into the weir tanks for a slow mixing. The weir tanks will be raised 12 inches to allow for gravity flow into the clarifiers that contain baffles and settling tube media. The sediment will collect in the baffles and will be pumped out through the manifolds located on each side of the tanks. From the clarifier, a centrifugal pump will transfer water through a bag filter manifold with two (2) multi bag filter vessels plumbed in parallel such that one bag filter vessel (containing six (6) No. 2 bag filters) can operate while the other remains in standby. During a bag filter change out, one vessel is removed from service while one remains in operation so that water treatment never needs to be shut down. Each bag filter housing includes isolation valves, sample ports, and pressure gauges on the influent and effluent piping so that it is clear when a bag filter changeout is required. The maximum flow rate through the specified bag filters is 500 gpm and 125 pounds per square inch (PSI).

From the bag filters, water is discharged to one (1) zeolite vessel (10,000 lbs.) and two (2) parallel trains each containing two (2) liquid phase carbon vessels (3,000 lbs.) in series. There will be a total of one (1) zeolite vessel and four (4) carbon vessels. The zeolite vessel is rated for a maximum flowrate of 300 gpm and 75 PSI while the liquid phase carbon vessels are rated for a maximum flow rate of 200 gpm and 75 PSI. Following the carbon vessels will be one (1) flow meter/totalizer. Effluent water will be discharged to the embayment, inside a fully enclosed area surrounded by a turbidity curtain, also known as the "work area".

The system components will be connected using a combination of rubber suction hose and SCH40/SCH80 PVC piping. The connection from the weir tanks to the clarifiers will be made primarily with 6-inch/4-inch hard pipe. With the exception of the weir tanks and clarifiers, the treatment system will be enclosed in a wooden structure approximately 45 feet long, 8 feet wide and 12.5 feet tall. This enclosure will be heated and provided with lighting. In addition, tank heaters will be placed in the weir tanks.

Spill containments will be under all the tanks and the treatment system. Containment areas will be pumped down daily or as needed and the water from the spills or rain will be pumped into the weir tanks for treatment.

Final Visual Inspection

Grid 46 Remediation and Dredge Barge Decontamination
1 Horizon Way
Everett, MA 02149

Dear Mr. Matt Grove,

On December 20, 2017, LBP Solutions, LLC (LBP) performed a visual inspection to determine the completion of asbestos remediation and decontamination activities. Remediation activities involved the removal of asbestos containing material and sediment from Grid 46 and the decontamination of dredge barge. Charter Contracting Company INC. Massachusetts Department of Labor Standards License # AC000877 conducted the redemiation utilizing an excavator with a dredge bucket and then utilized hand tools to decontaminate the dredge barge and dredge bucket. Upon visual inspection of the work area, no evidence of visible debris was observed. Mr. Mark Jacobs of LBP, Massachusetts Department of Labor Standards License # AM900522, performed the visual inspection.

A copy of the visual inspection log is also attached.

LBP would like to thank you for the opportunity to have serviced Mr. Matt Grove's environmental testing needs. If you have any questions regarding the completed testing, please don't hesitate to call.

Sincerely,

Mark Jacobs

LBP SOLUTIONS

Date: 1/23/18

Project: J170204

Contractor: Charter Contracting Company, LLC

Site Address: 1 Horizon Way, Everett, MA

Work Area: Deck barge - 2 Roll offs ACWM dumpsters

Asbestos Abatement Activities:
Crew Utilized hand tools, power tools and pressure washer to decontaminate the 2 roll off ACWM dumpsters.

Visual Inspection Checklist:

- [x] All non-essential equipment removed from the work area.
- [x] All asbestos containing waste material removed from the work area
- [x] Asbestos waste containers/bags properly sealed and labeled
- [ ] Negative air machines thoroughly cleaned including wheels and exhaust tubes. N/A
- [ ] Scaffolding and ladders thoroughly cleaned and free and clear of all visible debris N/A
- [x] Decontamination unit thoroughly cleaned and free and clear of all visible debris
- [ ] Interior polyethylene walls free and clear of all visible debris N/A
- [ ] Interior polyethylene floors free and clear of all visible debris N/A

Abated surfaces: (circle all that apply)

Pipes Fittings Tanks Boilers HVAC Components

Interior Walls Floors Roof Siding Sink Other Decontamination

Are the abated surfaces free and clear of all visible debris? yes

If no please describe additional cleaning required:

Industrial Hygienist: Mark Jacobs

Contractor Representative: Matt McCabe

Disclaimer: The intent of this document is to assist the licensed Asbestos Project Monitor in determining if the work area is free of all visible debris at the time of the inspection. This visual inspection is valid for the date on which it is signed. LBP Solutions, LLC does not take responsibility for site conditions that may change following a visual inspection.

Final Visual Inspection

Deck Barge and Roll Offs - Decontamination
1 Horizon Way
Everett, MA 02149

Dear Mr. Matt Grove,

On January 23, 2018, LBP Solutions, LLC (LBP) performed a visual inspection to determine the completion of asbestos decontamination activities. Decontamination activities involved the removal of asbestos contaminated sediment from the two roll offs and deck barge. Charter Contracting Company INC. Massachusetts Department of Labor Standards License # AC000877 conducted the decontamination utilizing hand tools, power tools, and pressure washer to decontaminate the deck barge and two roll offs. Upon visual inspection of the work area, no evidence of visible debris was observed. Mr. Mark Jacobs of LBP, Massachusetts Department of Labor Standards License # AM900522, performed the visual inspection.

A copy of the visual inspection log is also attached.

LBP would like to thank you for the opportunity to have serviced Mr. Matt Grove's environmental testing needs. If you have any questions regarding the completed testing, please don't hesitate to call.

Sincerely,

Mark Jacobs

Mark Jacobs
Project Manager

Water Treatment System Analytical Data

CERTIFICATE OF ANALYSIS

Katherine Mason
Charter Contracting Company
500 Harris Ave, Suite 4R
Boston, MA 02118

RE: Wynn Boston Harbor Dredging (454)
ESS Laboratory Work Order Number: 1710460

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 3:10 pm, Nov 14, 2017

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Subcontracted Analyses
Alpha Analytical - Westboro, MA Arsenic, Lead

CERTIFICATE OF ANALYSIS

Client Name: Charter Contracting Company
Client Project ID: Wynn Boston Harbor Dredging

ESS Laboratory Work Order: 1710460

SAMPLE RECEIPT

The following samples were received on October 18, 2017 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

Question I: All samples for Metals, EPH, and SVOA were analyzed for a subset of the required MCP list per the client's request.

Revision 1 November 14, 2017: This report has been revised to include PCB results, updated methods for Arsenic and Lead, reporting of Bis (2-ethylhexyl) phthalate only for SVOA and removal of Turbidity results per client request.

CURRENT SW-846 METHODOLOGY VERSIONS

Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH / VPH

Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035 - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **1710460-01 through 1710460-08**

Matrices: ( ) Ground Water/Surface Water ( ) Soil/Sediment ( ) Drinking Water ( ) Air (X) Other: Aqueous

CAM Protocol (check all that apply below):

( ) 8260 VOC CAM II A	(X) 7470/7471 Hg CAM III B	( ) MassDEP VPH (GC/PID/FID) CAM IV A	( ) 8082 PCB CAM V A	( ) 9014 Total Cyanide/PAC CAM VI A	( ) 6860 Perchlorate CAM VIII B
(X) 8270 SVOC CAM II B	( ) 7010 Metals CAM III C	( ) MassDEP VPH (GC/MS) CAM IV B	( ) 8081 Pesticides CAM V C	( ) 7196 Hex Cr CAM VI B	( ) MassDEP APH CAM IX A
(X) 6010 Metals CAM III A	( ) 6020 Metals CAM III D	(X) MassDEP EPH CAM IV B	( ) 8151 Herbicides CAM V C	( ) Explosives CAM VIII A	( ) TO-15 VOC CAM IX B

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	VPH, EPH, APH and TO-15 only: a. Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "'Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes ( ) No (X)*
	Data User Note: ***Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.***	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

****All negative responses must be addressed in an attached laboratory narrative.***

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Notes and Definitions

Z16a	Aqueous pH measured in water at 16.2 ºC.
Z16	Aqueous pH measured in water at 15.2 ºC.
Z-06	pH <= 2
U	Analyte included in the analysis, but not detected
S+	Surrogate recovery(ies) above upper control limit (S+).
Q	Calibration required quadratic regression (Q).
D+	Relative percent difference for duplicate is outside of criteria (D+).
D	Diluted.
B+	Blank Spike recovery is above upper control limit (B+).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit

MADEP MCP Response Action Analytical Report Certification

This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.

An affirmative response to questions A through F is required for "Presumptive Certainty" status		
A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	YES
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a.	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	N/A
E b.	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	N/A
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES

A response to questions G, H and I is required for "Presumptive Certainty" status		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	NO
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	YES
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	NO

For any questions answered "No", please refer to the case narrative section on the following page(s).

Please note that sample matrix information is located in the Sample Results section of this report.

Project Name: Not Specified
Project Number: 1710460

Lab Number: L1740393
Report Date: 11/10/17

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Lab Number: L1740393
Report Date: 11/10/17

Case Narrative (continued)

MCP Related Narratives

Total Metals

L1740393-02: The sample has elevated detection limits due to the dilution required by the high concentrations of target and non-target elements.

In reference to question G:

L1740393-02: One or more of the target analytes did not achieve the requested CAM reporting limits.

In reference to question I:

All samples were analyzed for a subset of MCP analytes per the Chain of Custody.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Project Name: Not Specified **Lab Number:** L1740393

Project Number: 1710460 **Report Date:** 11/10/17

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the reporting limit (RL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: NPW and SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
EPA 9012B: NPW: Total Cyanide
EPA 9050A: NPW: Specific Conductance
SM3500: NPW: Ferrous Iron
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.
SM5310C: DW: Dissolved Organic Carbon

Mansfield Facility
SM 2540D: TSS
EPA 3005A NPW
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water
SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, EPA 351.1, SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9221E.**

Mansfield Facility:

Drinking Water
EPA 200.7: Ba, Be, Cd, Cr, Cu, Ni, Na, Ca. **EPA 200.8:** Sb, As, Ba, Be, Cd, Cr, Cu, Pb, Ni, Se, TL. **EPA 245.1** Hg.

Non-Potable Water
EPA 200.7: Al, Sb, As, Be, Cd, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Mo, Ni, K, Se, Ag, Na, Sr, TL, Ti, V, Zn.
EPA 200.8: Al, Sb, As, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn.
EPA 245.1 Hg.

RE: Wynn Boston Harbor Dredging (454)
ESS Laboratory Work Order Number: 1710654

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 3:53 pm, Nov 14, 2017

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Subcontracted Analyses
Alpha Analytical - Westboro, MA Lead

CERTIFICATE OF ANALYSIS

Client Project ID: Wynn Boston Harbor Dredging

ESS Laboratory Work Order: 1710654

SAMPLE RECEIPT

The following samples were received on October 25, 2017 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

Question I: All samples for Metals, EPH, and SVOA were analyzed for a subset of the required MCP list per the client's request.

Lab Number	Sample Name	Matrix	Analysis
1710654-01	Wynn-CC-171025-INF1	Aqueous	8082A, 8270D

MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **1710654-01 through 1710654-08**

Matrices: (X) Ground Water/Surface Water ( ) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

CAM Protocol (check all that apply below):

( ) 8260 VOC CAM II A	(X) 7470/7471 Hg CAM III B	( ) MassDEP VPH (GC/PID/FID) CAM IV A	(X) 8082 PCB CAM V A	( ) 9014 Total Cyanide/PAC CAM VI A	( ) 6860 Perchlorate CAM VIII B
(X) 8270 SVOC CAM II B	( ) 7010 Metals CAM III C	( ) MassDEP VPH (GC/MS) CAM IV B	( ) 8081 Pesticides CAM V C	( ) 7196 Hex Cr CAM VI B	( ) MassDEP APH CAM IX A
(X) 6010 Metals CAM III A	( ) 6020 Metals CAM III D	(X) MassDEP EPH CAM IV B	( ) 8151 Herbicides CAM V C	( ) Explosives CAM VIII A	( ) TO-15 VOC CAM IX B

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	VPH, EPH, APH and TO-15 only: a. Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "'Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes ( ) No (X)*
	Data User Note: ***Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.***	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes (X) No ( )*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

****All negative responses must be addressed in an attached laboratory narrative.***

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Notes and Definitions

Z16a	Aqueous pH measured in water at 17.0 ºC.
Z16	Aqueous pH measured in water at 16.2 ºC.
Z-06	pH <= 2
U	Analyte included in the analysis, but not detected
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit

MADEP MCP Response Action Analytical Report Certification

This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.

An affirmative response to questions A through F is required for "Presumptive Certainty" status		
A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	YES
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a.	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	N/A
E b.	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	N/A
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES

A response to questions G, H and I is required for "Presumptive Certainty" status		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	NO
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	YES
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	NO

For any questions answered "No", please refer to the case narrative section on the following page(s).

Please note that sample matrix information is located in the Sample Results section of this report.

Project Name: Not Specified
Project Number: 1710460
Lab Number: L1740393
Report Date: 11/10/17

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: Not Specified **Lab Number:** L1740393
Project Number: 1710460 **Report Date:** 11/10/17

Case Narrative (continued)

MCP Related Narratives

Total Metals

L1740393-02: The sample has elevated detection limits due to the dilution required by the high concentrations of target and non-target elements.

In reference to question G:

L1740393-02: One or more of the target analytes did not achieve the requested CAM reporting limits.

In reference to question I:

All samples were analyzed for a subset of MCP analytes per the Chain of Custody.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Melissa Cripps

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Project Name: Not Specified **Lab Number:** L1740393

Project Number: 1710460 **Report Date:** 11/10/17

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the reporting limit (RL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: NPW and SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
EPA 9012B: NPW: Total Cyanide
EPA 9050A: NPW: Specific Conductance
SM3500: NPW: Ferrous Iron
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.
SM5310C: DW: Dissolved Organic Carbon

Mansfield Facility
SM 2540D: TSS
EPA 3005A NPW
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Date Received: 10/25/2017
Project Due Date: 11/1/2017
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 2.0 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / NA
10. Were any analyses received outside of hold time? Yes / No

11. Any Subcontracting needed? Yes / No
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? Yes / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? Yes / No / NA

13. Are the samples properly preserved? Yes / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: Time: By:

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / No
    a. Was there a need to contact the client? Yes / No
    Who was contacted? Date: Time: By:

RE: Wynn Boston Harbor Dredging (454)
ESS Laboratory Work Order Number: 1711036

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 2:14 pm, Nov 10, 2017

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

CERTIFICATE OF ANALYSIS

Client Name: Charter Contracting Company
Client Project ID: Wynn Boston Harbor Dredging

ESS Laboratory Work Order: 1711036

SAMPLE RECEIPT

The following samples were received on November 01, 2017 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

Question I: All samples for Metals, SVOA, and EPH were analyzed for a subset of the required MCP list per the client's request.

Lab Number	Sample Name	Matrix	Analysis
1711036-01	171101-Wynn-CC-Influent 1	Aqueous	8082A, 8270D

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (x) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (x) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (x) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (x) No ( )
E	VPH, EPH, APH and TO-15 only: a. Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (x) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (x) No ( )

Responses to Questions G, H and I below are required for "'Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)? ***Data User Note:*** ***Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.***	Yes (x) No ( )*
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (x)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (x)*

****All negative responses must be addressed in an attached laboratory narrative.***

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Notes and Definitions

Z16a	Aqueous pH measured in water at 14.7 ºC.
Z16	Aqueous pH measured in water at 14.3 ºC.
Z-06	pH <= 2
U	Analyte included in the analysis, but not detected
S+	Surrogate recovery(ies) above upper control limit (S+).
D	Diluted.
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
B+	Blank Spike recovery is above upper control limit (B+).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit

ESS Laboratory Sample and Cooler Receipt Checklist

Client: Charter Contracting Company LLC - KPB/TB/GZA/ML

Shipped/Delivered Via: ESS Courier

ESS Project ID: 1711036
Date Received: 11/1/2017
Project Due Date: 11/8/2017
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 1.5 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / NA
10. Were any analyses received outside of hold time? Yes / No

11. Any Subcontracting needed? Yes / No
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? Yes / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? Yes / No / NA

13. Are the samples properly preserved? Yes / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: Time: By:

Sample Receiving Notes:

RE: Wynn Boston Harbor Dredging (454)
ESS Laboratory Work Order Number: 1711289

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 4:25 pm, Nov 17, 2017

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

ESS Laboratory Work Order: 1711289

SAMPLE RECEIPT

The following samples were received on November 09, 2017 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

Question I: All samples for Metals, SVOA, and EPH were analyzed for a subset of the required MCP list per the client's request.

Lab Number	Sample Name	Matrix	Analysis
1711289-01	171101-Wynn-CC-Influent-1	Aqueous	8082A, 8270D

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	VPH, EPH, APH and TO-15 only: a. Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for '"Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	Data User Note: ***Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.***	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

****All negative responses must be addressed in an attached laboratory narrative.***

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

ESS Project ID: 1711289
Date Received: 11/9/2017
Project Due Date: 11/16/2017
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 1.3 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / NA
10. Were any analyses received outside of hold time? Yes / No

11. Any Subcontracting needed? Yes / No
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? Yes / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? Yes / No / NA

13. Are the samples properly preserved? Yes / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: Time: By:

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / No
    a. Was there a need to contact the client? Yes / No
    Who was contacted? Date: Time: By:

RE: Wynn Boston Harbor Dredging (454)
ESS Laboratory Work Order Number: 1711467

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 5:17 pm, Nov 17, 2017

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Client Name: Charter Contracting Company
Client Project ID: Wynn Boston Harbor Dredging

ESS Laboratory Work Order: 1711467

SAMPLE RECEIPT

The following samples were received on November 15, 2017 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

Question I: All samples for Metals, SVOA and EPH were analyzed for a subset of the required MCP list per the client's request.

RE: Wynn Boston Harbor Dredging (454)
ESS Laboratory Work Order Number: 1712309

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 1:02 pm, Dec 21, 2017

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

CERTIFICATE OF ANALYSIS

Client Project ID: Wynn Boston Harbor Dredging

ESS Laboratory Work Order: 1712309

SAMPLE RECEIPT

The following samples were received on December 13, 2017 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

Question I: All samples for Metals, SVOA, and EPH were analyzed for a subset of the required MCP list per the client's request.

Lab Number	Sample Name	Matrix	Analysis
1712309-01	171101-Wynn-CC-Influent-1	Aqueous	8082A, 8270D

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	VPH, EPH, APH and TO-15 only: a. Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes ( ) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for '"Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	Data User Note: ***Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.***	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

****All negative responses must be addressed in an attached laboratory narrative.***

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Client: Charter Contracting Company LLC - KPB/TB/GZA/ML

Shipped/Delivered Via: ESS Courier

ESS Project ID: 1712309
Date Received: 12/13/2017
Project Due Date: 12/20/2017
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 3.4 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / NA
10. Were any analyses received outside of hold time? Yes / No

11. Any Subcontracting needed? Yes / No
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? Yes / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? Yes / No / NA

13. Are the samples properly preserved? Yes / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: Time: By:

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / No
    a. Was there a need to contact the client? Yes / No
    Who was contacted? Date: Time: By:

RE: Wynn Boston Harbor Dredging (454)
ESS Laboratory Work Order Number: 1801282

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 5:18 pm, Jan 24, 2018

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

CERTIFICATE OF ANALYSIS

Client Name: Charter Contracting Company
Client Project ID: Wynn Boston Harbor Dredging

ESS Laboratory Work Order: 1801282

SAMPLE RECEIPT

The following samples were received on January 17, 2018 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

Question I: All samples for Metals, SVOA, and EPH were analyzed for a subset of the required MCP list per the client's request.

Lab Number	Sample Name	Matrix	Analysis
1801282-01	171101-Wynn-CC-Influent	Aqueous	2540D, 6010C, 7470A, 8082A, 8270D, 9040, EPH8270, MADEP-EPH
1801282-02	171101-Wynn-CC-Effluent	Aqueous	2540D, 6010C, 7470A, 8082A, 8270D, 9040, EPH8270, MADEP-EPH

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	VPH, EPH, APH and TO-15 only: a. Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for '"Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes ( ) No (X)*
	Data User Note: ***Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.***	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes (X) No ( )*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

****All negative responses must be addressed in an attached laboratory narrative.***

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Notes and Definitions

Z16a	Aqueous pH measured in water at 15.9 ºC.
Z16	Aqueous pH measured in water at 15.6 ºC.
Z-06	pH <= 2
U	Analyte included in the analysis, but not detected
EL	Elevated Method Reporting Limits due to sample matrix (EL).
D	Diluted.
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit

ESS Laboratory Sample and Cooler Receipt Checklist

Client: Charter Contracting Company LLC - KPB/TB/GZA/ML

Shipped/Delivered Via: ESS Courier

ESS Project ID: 1801282
Date Received: 1/17/2018
Project Due Date: 1/24/2018
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 2.9 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** (Yes) / No / NA
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? Yes / (No)
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? Yes / (No)
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? Yes / No / NA

13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: Time: By:

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / No
    Who was contacted? Date: Time: By:

RE: Wynn Boston Harbor Dredging (454)
ESS Laboratory Work Order Number: 1802262

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 12:31 pm, Feb 21, 2018

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

ESS Laboratory Work Order: 1802262

SAMPLE RECEIPT

The following samples were received on February 14, 2018 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

Question I: All samples for Metals, SVOA and EPH were analyzed for a subset of the required MCP list per the client's request.

Lab Number	Sample Name	Matrix	Analysis
1802262-01	171101-Wynn-CC-Influent	Aqueous	2540D, 6010C, 6020A, 7010, 7470A, 8082A, 8270D, 9040, EPH8270, MADEP-EPH
1802262-02	171101-Wynn-CC-Effluent	Aqueous	2540D, 6010C, 6020A, 7010, 7470A, 8082A, 8270D, 9040, EPH8270, MADEP-EPH

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	VPH, EPH, APH and TO-15 only: a. Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for '"Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes ( ) No (X)*
	Data User Note: ***Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.***	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

****All negative responses must be addressed in an attached laboratory narrative.***

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Notes and Definitions

Z16a	Aqueous pH measured in water at 15.6 ºC.
Z16	Aqueous pH measured in water at 15.5 ºC.
Z-06	pH <= 2
U	Analyte included in the analysis, but not detected
EL	Elevated Method Reporting Limits due to sample matrix (EL).
D	Diluted.
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit

CERTIFICATE OF ANALYSIS

Client Name: Charter Contracting Company
Client Project ID: Wynn Boston Harbor Dredging

ESS Laboratory Work Order: 1802262

ESS LABORATORY CERTIFICATIONS AND ACCREDITATIONS

ESS Laboratory Sample and Cooler Receipt Checklist

Client: Charter Contracting Company LLC - KPB/TB/GZA/ML

Shipped/Delivered Via: ESS Courier

ESS Project ID: 1802262
Date Received: 2/14/2018
Project Due Date: 2/21/2018
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 1.5 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / NA
10. Were any analyses received outside of hold time? Yes / No

11. Any Subcontracting needed? Yes / No
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? Yes / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? Yes / No / NA

13. Are the samples properly preserved? Yes / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: Time: By:

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / No
    a. Was there a need to contact the client? Yes / No
    Who was contacted? Date: Time: By:

Sample Number	Container ID	Proper Container	Air Bubbles Present	Sufficient Volume	Container Type	Preservative	Record pH (Cyanide and 608 Pesticides)
01	201949	Yes	NA	Yes	1L Amber - HCl	HCl

Qualifier	Description
#	Modified result
<	Less than.
>	Greater than.
>=	Greater than or equal to
B	Present in Method Blank (B).
BOD	Initial setup for BOD yielded unacceptable results. The sample was replanted on [Custom Value] and these results are reported.
DW	Water layer was decanted from sample prior to analysis.
E	Reported above the quantitation limit; Estimated value (E).
EL	Elevated Method Reporting Limits due to sample matrix (EL).
H	Estimated value. Sample hold times were exceeded (H).
HT	The maximum holding time listed in 40 CFR Part 136 Table II for pH, Dissolved Oxygen, Sulfite and Residual Chlorine is fifteen minutes.
J	Reported between MDL and MRL
J*	This analyte was evaluated down to the Limit of Detection (LOD).
L	Reported to the Method Detection Limit.
LC	Lower value is used due to matrix interferences (LC).
LS	Limited Sample did not allow for re-extraction.
NE	Not Evaluated
OPO4	Samples for Orthophosphate are required to be filtered within 15 minutes of sampling as stated in 40 CFR Part 136 Table II.
P	Percent difference between primary and confirmation results exceeds 40% (P).
PB	Presence of PCBs in the sample may cause this analyte to be biased high.
PC	Possible carryover
PH	Sample was received improperly preserved (PH).
PH-	pH <= 2
PH+	pH > 2 (PH+)
PP	This sample showed multiple peaks present with no discernable PCB Aroclor pattern. PCB congeners may be present.
PP-	This analyte is a poor performer for this method
R	Eh-pH data demonstrates reducing conditions.
RW	Reduced weight used for TCLP/SPLP Extraction.
SUB	Subcontracted analysis; see attached report
TCN	Based on non-detect result for Total Cyanide, Amenable Cyanide would also be non-detect. Total Cyanide is reported.
TOT	In review of the total results obtained on this sample, the TCLP target analytes were either ND above the MRL or not present in a concentration such that the sample would generate TCLP extract concentrations above the TCLP MRL. TCLP was not performed.
V	Estimated value.
WL	Results obtained from a deionized water leach of the sample.
U	Undetected
D	Diluted

RE: Wynn Boston Harbor Backfill (454)
ESS Laboratory Work Order Number: 1711199

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 5:16 pm, Nov 20, 2017

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Subcontracted Analyses

CTS - Cranston, RI	Grain Size Analysis, Soil Classification, Water Content
Pace Analytical - Minneapolis, MN	Dioxin

ESS Laboratory Work Order: 1711199

SAMPLE RECEIPT

The following samples were received on November 08, 2017 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

Low Level VOA vials were frozen by ESS Laboratory on November 8, 2017 at 14:19.

Lab Number	Sample Name	Matrix	Analysis
1711199-01	Type A Capping Sand	Soil	§, 6010C, 6020A, 7471B, 8081B, 8082A, 8151A, 8260B Low, 8270D, 9060
1711199-02	Type C Capping Sand	Soil	§, 6010C, 6020A, 7471B, 8081B, 8082A, 8151A, 8260B Low, 8270D, 9060

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	VPH, EPH, APH and TO-15 only: a. Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes ( ) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for '"Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	Data User Note: ***Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.***	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes (X) No ( )*

****All negative responses must be addressed in an attached laboratory narrative.***

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

REPORT OF LABORATORY ANALYSIS FOR PCDD/PCDF

Report Prepared Date:

November 20, 2017

Report Information:

Pace Project #: 10410333
Sample Receipt Date: 11/09/2017
Client Project #: 1711199
Client Sub PO #: B02407
State Cert #: N/A

Invoicing & Reporting Options:

The report provided has been invoiced as a Level 2 PCDD/PCDF Report. If an upgrade of this report package is requested, an additional charge may be applied.

Please review the attached invoice for accuracy and forward any questions to Joanne Richardson, your Pace Project Manager.

DISCUSSION

This report presents the results from the analyses performed on two samples submitted by a representative of ESS Laboratory. The samples were analyzed for the presence or absence of polychlorodibenzo-p-dioxins (PCDDs) and polychlorodibenzofurans (PCDFs) using a modified version of USEPA Method 8290. The reporting limits were set to correspond to the lowest calibration points and a nominal 10-gram sample amount, and the sensitivity was verified by signal-to-noise measurements. The quantitation limits, adjusted for sample extraction amount, may be somewhat higher or lower than the reporting limits provided in this report.

The recoveries of the isotopically-labeled PCDD/PCDF internal standards in the sample extracts ranged from 49-83%. Except for two low values, which were flagged "R" on the results table, the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Also, since the quantification of the native 2,3,7,8-substituted congeners was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of PCDDs and PCDFs at the reporting limits. These results indicate that the sample processing steps did not significantly impact the results reported for the field samples.

A laboratory spike sample was also prepared using clean reference matrix that had been fortified with native standard materials. The recoveries of the native compounds ranged from 80-97%. These results were within the target range for the method. Matrix spikes were prepared with the sample batch using sample material from a separate project; results from these analyses will be provided upon request.

It should be noted that the samples were analyzed without a previous instrument blank. Since PCDDs and PCDFs were not detected in the field samples at the reporting limits, the reported results were not impacted.

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 6:07 pm, Dec 12, 2017

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

CERTIFICATE OF ANALYSIS

Client Name: Charter Contracting Company
Client Project ID: Wynn Boston Harbor Backfill

ESS Laboratory Work Order: 1711726

SAMPLE RECEIPT

The following samples were received on November 28, 2017 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

Low Level VOA vials were frozen by ESS Laboratory on November 28, 2017 at 20:48.

CURRENT SW-846 METHODOLOGY VERSIONS

Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH / VPH

Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035 - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **1711726-01 through 1711726-11**

Matrices: ( ) Ground Water/Surface Water (X) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

CAM Protocol (check all that apply below):

(X) 8260 VOC CAM II A	(X) 7470/7471 Hg CAM III B	( ) MassDEP VPH (GC/PID/FID) CAM IV A	(X) 8082 PCB CAM V A	( ) 9014 Total Cyanide/PAC CAM VI A	( ) 6860 Perchlorate CAM VIII B
(X) 8270 SVOC CAM II B	( ) 7010 Metals CAM III C	( ) MassDEP VPH (GC/MS) CAM IV B	(X) 8081 Pesticides CAM V C	( ) 7196 Hex Cr CAM VI B	( ) MassDEP APH CAM IX A
(X) 6010 Metals CAM III A	(X) 6020 Metals CAM III D	( ) MassDEP EPH CAM IV B	(X) 8151 Herbicides CAM V C	( ) Explosives CAM VIII A	( ) TO-15 VOC CAM IX B

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	VPH, EPH, APH and TO-15 only: a. Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes ( ) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "'Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	Data User Note: ***Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.***	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes (X) No ( )*

****All negative responses must be addressed in an attached laboratory narrative.***

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.
