Revised Supplemental Phase II Comprehensive Site Assessment Report

Sediments Adjacent to the Former Everett Staging Yard
1 Horizon Way, Everett, Massachusetts

Release Tracking Number (RTN) 3-13341

Submitted by:

AMEC Massachusetts, Inc.
271 Mill Road
Chelmsford, MA 01824

December 30, 2016

EXECUTIVE SUMMARY

The sediments in a portion of the Mystic River adjacent to the Former Everett Staging Yard property have been impacted by:

- Metals (arsenic, lead, mercury and vanadium) from historical chemical manufacturing processes and operations on the upland portions of the property,
- Phthalates and polychlorinated biphenyls (PCBs) associated with the historical operations on the adjacent Monsanto West property, and
- Low levels of PAHs and petroleum hydrocarbons attributed to other industrial and anthropogenic sources (e.g., stormwater runoff, industrial releases, and shipping-related impacts).

The primary potential human exposure pathway is dermal contact with sediment when wading in the nearshore. Catching and consuming fish which are contaminated with Site-related chemicals is not a significant pathway. A Method 3 risk assessment for sediments concluded that a condition of No Significant Risk exists for human health.

The primary exposure pathways for ecological receptors are direct contact with sediments, incidental sediment ingestion, and consumption of contaminated prey. A previous Stage I Environmental Screening documented a condition of No Significant Risk for exposure to surface water, and No Significant Risk for exposure of birds and mammals to shoreline sediment. A second Stage I Environmental Screening (presented herein) for the Former Everett Staging Yard Site (Release Tracking Number 3-13341) concluded there are potentially significant exposure pathways with respect to the benthic community exposed to sediment. Therefore, remedial actions are necessary to address exposure to impacted sediments by benthic organisms in order to achieve a condition of No Significant Risk.

Remedial actions which are likely to achieve a condition of No Significant Risk and a Permanent Solution based on these goals will be developed and evaluated as part of Massachusetts Contingency Plan (MCP) Phases III and IV. These actions will likely include dredging, capping, or some combination of the two. In order to achieve a Permanent Solution, a condition of No Significant Risk for all chemicals not attributable to local conditions will need to be achieved, and issues associated with survival, growth, and reproduction identified in toxicity tests will need to be addressed.

The purpose of this Revised Supplemental Phase II Comprehensive Site Assessment Report (Revised Phase II Report) is to summarize the site history and site characterization work completed to date, present the Conceptual Site Model (CSM), assess risks to human health and the environment, and define the limits of those areas which could pose a risk. This Revised Phase II Report was prepared in order to address questions raised by the Massachusetts Department of Environmental Protection (MassDEP) with an earlier Supplemental Phase II Report. AMEC Massachusetts, Inc. (AMEC) has prepared this report for Wynn MA, LLC and Everett Property, LLC the current owners of the property on which the Site is located.

1.0 INTRODUCTION

1.1 Purpose and Scope

AMEC Massachusetts, Inc. (AMEC) has prepared this Revised Supplemental Phase II Comprehensive Site Assessment Report (herein "Revised Phase II Report") for the Mystic River sediment portion the Former Everett Staging Yard Disposal Site (the "Site"). The Site, which includes both uplands and a portion of the Mystic River, is identified by Release Tracking Number (RTN) 3-13341. This Revised Phase II Report was completed for Wynn MA, LLC and Everett Property, LLC (collectively, "Wynn") the current owners of the property on which the Site is located.

A 2012 Phase II Report prepared by GEI Consultants, Inc. (GEI), which included a 2006 Ecological Risk Characterization completed by Menzie-Cura & Associates, Inc. (MCA), concluded that the sediments adjacent to the property located at 1 Horizon Way in Everett had been impacted by releases from historical chemical manufacturing processes and operations and posed a potential risk to benthic invertebrates (GEI, 2012; MCA, 2006). In December 2015, GZA GeoEnvironmental, Inc. (GZA) submitted a Supplemental Phase II Report (the "GZA Supplemental Phase II Report") which contained the results from an extensive sampling program as well as an updated Site boundary and risk characterization (GZA, 2015b). In May 2016, the Massachusetts Department of Environmental Protection (MassDEP) issued a letter outlining a number of questions it had regarding the Supplemental Phase II Report and requesting additional assessment and/or data review (MassDEP, 2016b, 2016c).

AMEC has prepared this Revised Phase II Report on behalf of Wynn in order to order to address MassDEP's concerns.

1.2 Report Organization

This Revised Phase II Report summarizes the site history and site characterization work completed to date, presents the Conceptual Site Model (CSM), and assesses risks to human health and the environment. The format of this report closely follows that of the 2015 GZA Supplemental Phase II Report, and relies heavily on information presented therein. This Revised Phase II Report also meets the specific requirements for a Phase II Report outlined in the Massachusetts Contingency Plan (MCP) at 310 CMR 40.0835.

The remainder of this Revised Phase II Report consists of the following sections:

- Section 2: Background – Presents the site description, an expanded site history (ownership, operations, and releases), and a discussion of regulatory history and status.
- Section 3: Field Investigations - Presents a brief summary of previous site investigations (2005-2007) and those conducted by GZA in 2013-2015. Section 3

includes information previously presented in Sections 2.2 and 3.0 of the GZA Supplemental Phase II Report.

- Section 4: Conceptual Site Model - Presents a new discussion of sources and release mechanisms, migrations pathways, and potential exposure routes.
- Section 5: Local Conditions and Site Boundary – Describes development of local conditions database, selection of Site-related chemicals of concern and determination of the extent of contamination in sediments. This replaces the discussion in Section 4 of the GZA 2015 Supplemental Phase II Report.
- Section 6: Ecological Risk Characterization – Documents the updated evaluation of risk to the environment. This replaces the discussion in Section 5 of the GZA Supplemental Phase II Report.
- Section 7: Human Health Risk Characterization – Documents the updated evaluation of risk to human health. This replaces the discussion in Section 6 of the GZA Supplemental Phase II Report.
- Section 8: Delineation of Area Posing a Risk – Identifies the portion of the property which poses a risk based on Site-related chemicals. This replaces the discussion in Section 5 of the GZA Supplemental Phase II Report.

Supporting data are provided in figures, tables, and appendices referenced throughout the report.

2.0 BACKGROUND

2.1 Site Location and Locus Map

For the purposes of this report, the "property" refers to the combined areas of land and water which are currently owned by Wynn and are located at 1 Horizon Way in Everett and an unnumbered parcel on Alford Street in Boston (**Figure 1**). The Wynn property encompasses approximately 35 acres, which includes an upland portion (approximately 22 acres) and a portion of the adjacent Mystic River to the southwest (approximately 13 acres). The approximate latitude and longitude for the Site are 42.39 degrees north and 71.07 degrees west, respectively. The Universal Transverse Mercator (UTM) coordinates are approximately 4,695,650 meters north and 329,600 meters east.

The upland portion of the property is an irregularly shaped, approximately 22-acre parcel of land roughly bounded by Alford Street/Broadway (Route 99) to the east, Massachusetts Bay Transit Authority (MBTA) railroad tracks to the west, an MBTA bus repair and maintenance facility to the north, and the Mystic River to the south. The sediment portion of the property in the Mystic River consists of an approximately 13-acre embayment of the Mystic River which is bounded to the northwest and north by the upland portion of the property and to the northeast and east by the Boston Water and Sewer Commission's Material Handling Facility (180-220 Alford Street).

Under the MCP, a "site" is an area or place from or at which a release of oil and/or hazardous materials (OHM) has occurred or exists.[1] A "disposal site" is the place or area where an "uncontrolled release" of OHM from a site has come to be located.[2] For the purposes of this report, the "Site", or more formally the Former Everett Staging Yard Disposal Site, includes the uplands where chemical manufacturing occurred and the portion of the sediment in the Mystic River which has been impacted by chemicals from the uplands.

Figure 2 is a detailed plan for the sediment portion of the property and depicts physical features, and sampling locations. The Site boundary in the Mystic River, which encompasses those areas where Site-related chemicals of concern have been detected at concentrations higher than local conditions, is discussed in Section 5 of this report.

2.2 Disposal Site History

A detailed history of the Site was included in a 2007 Phase II CSA Report prepared by Tetra Tech Rizzo (formerly Rizzo Associates) and in GEI's February 2012 Phase II CSA Report. Tetra Tech Rizzo's Site history was developed based on a review of Sanborn Fire Insurance maps, Registry of Deeds maps and documents, aerial photos, and other sources (Tetra Tech Rizzo, 2007). The

[1] 310 CMR 40.0006
[2] 310 CMR 40.0006

following is an abbreviated summary of key Site information as it pertains to the Mystic River sediment portion of the Site.

2.2.1 Ownership History

The Site is a portion of a larger property which was used by various chemical companies, including Cochrane Chemical Company, the Merrimac Chemical Company, and the Monsanto Chemical Company (Monsanto), from the 1860s until the late 1960s. These same companies also had operations on an adjacent property (referred to as "Monsanto West") which has since been redeveloped as the Gateway Center (response actions for that property were handled under RTNs 3-0313, 3-4200, and 3-4425). The buildings associated with chemical manufacturing at the Site were demolished in the late 1960s and 1970s. According to Tetra Tech Rizzo (2007), the Site was generally vacant by about 1980.

According to a 1997 Phase I Initial Site Investigation prepared by Consulting Engineers & Scientists (CES), Boston Edison acquired the property from Monsanto (no date given for the purchase). O'Donnell Sand & Gravel, Inc. (O'Donnell) acquired the property in the 1990s and used it as a storage area for equipment and excavated rock and tunnel muck from the construction of the Deer Island Outfall project (Tetra Tech Rizzo, 2007; GEI, 2012). Mystic Landing, LLC (Mystic Landing) acquired the Site from O'Donnell Sand & Gravel, and leased the property to Modern Continental Construction Co., Inc. as a materials and equipment laydown yard for the Central Artery Project (TetraTech Rizzo, 2007; GEI, 2012). FBT Everett Realty, LLC (FBT) purchased the property from Mystic Landing in 2009 (GEI, 2012). Wynn purchased the property from FBT in January 2015.

2.2.2 Operation History

Facilities operated by the Cochrane Chemical Company on the property included a boiler house, carpentry shop, and "lead storage house" from the late 1800s until at least 1903 (Tetra Tech Rizzo, 2007). Based on Tetra Tech's review of information available through the Registry of Deeds, several permits were issued to fill the present day central and southern portions of the Site with dredged material. Additional filling of the Site occurred from 1910 to 1935, with the present day limits of the upland portion of the property being roughly established by 1935 (Tetra Tech Rizzo, 2007). Fill material may also have included waste material from chemical production and manufacturing. A 1993 sketch of the Merrimac Chemical Company operations indicated buildings on the property were being used for storing or manufacturing sulfuric acid, sodium bisulfate, and ferric sulfate (CES, 1997). In addition, this sketch indicates the presence of an alum mud pond, a 35-foot high sulfur pile and a 30-foot high pile of pyrite cinders. A docking facility was located at the southern end of the Site adjacent to the large piles of materials.

Monsanto had acquired the property by 1943, and by 1950 was conducting large-scale chemical production on it. A 1950 Sanborn Fire Insurance map reviewed by Tetra Tech Rizzo[3] showed:

- numerous sulfuric acid tanks in the southwestern portion of the Site;
- alcohol production, including several large storage tanks for molasses, by the New England Alcohol Company in the central portion of the Site; and
- Monsanto administration buildings and laboratories in the northern portion of the property.

At the same time, operations on the Monsanto West property involved the manufacture and storage of phthalate ester plasticizers, polymeric plasticizers, and Therminol (an oil containing polychlorinated biphenyls, or PCBs). The buildings associated with chemical manufacturing on the property were demolished in the late 1960s and 1970s. According to Tetra Tech Rizzo (2007), the property was generally vacant by about 1980.

Beginning in the mid-1990s, the property was primarily used for material storage and as a construction staging yard (Tetra Tech Rizzo, 2007; GEI, 2012) with an office trailer complex, storage and maintenance garage, and miscellaneous storage sheds. According to GZA, the majority of the structures and materials associated with the laydown yard had been removed and the property was largely vacant at the time of Wynn's acquisition of the property from FBT (GZA, 2016a).

2.2.3 Release History

No specific discrete releases have been reported or documented at the Site. Releases to the upland and river portions of the Site likely occurred sporadically over the more than 100 year period of chemical manufacturing on the Site. As first noted by Tetra Tech Rizzo (2007), the highest concentrations of potentially Site-related chemicals have been measured in areas along the embayment and shoreline where materials were historically loaded and unloaded. Releases to the sediment may also have continued after chemical manufacturing ended due to the erosion of contaminated soil from the upland portion of the Site, and discharge of potentially contaminated groundwater through the sediments in the cove.

2.2.4 Regulatory History and Status

O'Donnell submitted the initial notification of a release to MassDEP in January 1996 based on the presence of elevated concentrations of certain metals and petroleum hydrocarbons in soil as well as areas of low pH. CES filed a Phase I Initial Site Investigation and Tier Classification (classifying the Site as Tier II) on behalf of O'Donnell in January 1997 (CES, 1997). No additional MCP Phase reports were submitted on behalf of O'Donnell resulting in multiple missed MCP compliance deadlines.

[3] The Sanborn maps were not included in the Tetra Tech Rizzo report. Only a discussion of what was observed.

Following Mystic Landing's purchase of the property in 2001, additional subsurface and sediment investigations were completed under Tetra Tech Rizzo and a Phase II Report was submitted in December 2007. According to Tetra Tech Rizzo, Mystic Landing was unable to meet MCP deadlines as "[m]*uch of the surface of the Site was not accessible, as it was covered with construction equipment and materials.*"[4] Therefore, Tetra Tech Rizzo proposed a modified schedule for completing the Phase III and IV Reports as well as achieving a Response Action Outcome (RAO) or entering Remedy Operation Status by October 31, 2008.[5]

FBT purchased the property in October 2009 and in February 2010 GEI filed an Eligible Person Certification and Revised Tier II Classification on FBT's behalf (GEI, 2010). This filing re-established MCP compliance deadlines which were set out in a 2010 Notice of Responsibility (NOR) issued by MassDEP. In February 2012, GEI submitted a Phase II CSA along with a Notice of Delay for the Phase III and IV reports which attributed the delays to a property access dispute (GEI, 2012). FBT subsequently submitted additional Notices of Delay as the selected remedial approach could vary depending on whether the construction of casino on the property was approved (MassDEP, 2014b). On June 10, 2014, FBT and MassDEP entered into an Administrative Consent Order (ACO) establishing revised deadlines for the Phase IV Report and RAO (MassDEP, 2014b).

Wynn purchased the property in January 2015 and in February 2015 an Eligible Person Certification and Revised Tier II Classification were submitted by GZA on Wynn's behalf (GZA, 2015a). This document included a "Supplemental Sampling and Analysis Plan" outlining an extensive sampling program to refine the Site boundary (GZA, 2015a). MassDEP issued a NOR in March 2015 which established interim deadlines for supplemental Phase II and Phase III reports for the Mystic River portion of the property[6]. In December 2015, GZA submitted a Supplemental Phase II Report which contained the results from the sediment sampling program as well as an updated Site boundary and risk characterization. In May 2016, MassDEP issued a letter outlining a number of concerns they had with the Supplemental Phase II Report and requesting additional assessment and/or data review (MassDEP, 2016b and c). This letter also established interim deadlines for submittal of a Revised Phase II Report, Phase III and Phase IV reports, and a Permanent or Temporary Solution or Remedy Operation Status. MassDEP supplied additional comments via email (MassDEP, 2016d) subsequent to a meeting between MassDEP, Wynn, and GZA in June 2016 and GZA's submittal of a sediment CSM (GZA, 2016a).

In September 2016, Wynn proposed an alternative approach to characterizing the Site and potential risks and supplied additional information requested by MassDEP (Wynn, 2016). On November 18, 2016, MassDEP, Wynn, GZA, and AMEC met to discuss the status of the project and agreed upon an approach which would allow the project to move forward (MassDEP, 2016e). This Revised Supplemental Phase II Report has been prepared to respond to MassDEP

[4] Tetra Tech Rizzo, 2007; p. 4.
[5] Tetra Tech Rizzo, 2007; p. 4.
[6] As well as a deadline for either a Permanent Solution, Temporary Solution, or Remedy Operation Status. See MassDEP, 2015 p. 2.

comments and provide an approach to Site assessment and closure that eliminates the causes of MassDEP's concerns.

3.0 FIELD INVESTIGATIONS

This section summarizes information previously presented in presented in Section 2.2 (Previous Environmental Investigations) and Section 3 (Field Investigation) of the GZA' Supplemental Phase II Report (GZA, 2015b).

3.1 Previous Site Investigations (2005-2007)

From December 2005 through May 2007, sediment samples were collected from 19 sampling locations in the Mystic River adjacent to the property by MCA, Tetra Tech Rizzo, and Williams Environmental Services, Inc. (Williams). These investigations are described in detail in Tetra Tech Rizzo's 2007 Phase II Report. Summaries of these investigations were also included in GEI's 2012 Phase II Report and the GZA Supplemental Phase II Report. GEI used the data from these investigations to infer the limits of contaminated sediments associated with the Site as depicted on Figure 2 in the 2012 GEI Phase II Report.

Sediment samples were analyzed for various chemical constituents, including Resource Conservation and Recovery Act (RCRA) 8 metals, semi-volatile organic compounds (SVOCs), extractable petroleum hydrocarbons (EPH) with target polycyclic aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), and volatile organic compounds (VOCs) by Alpha Analytical, Inc. (Alpha, formerly Alpha Woods Hole Laboratory). Some samples were also analyzed for sediment grain size distribution. MCA also collected three sediment samples in the river approximately 1.3 miles downstream of the Site to "*…assess the concentrations of contaminants in 'local conditions'*."[7] These samples were analyzed for MCP 14 metals, PAHs, total organic carbon (TOC) and grain size.

MCA also submitted eight sediment samples (five from the property and three local conditions samples) to Springborn-Smithers Laboratories in Wareham, Massachusetts for 28-day toxicity tests for survival, growth (biomass), and reproduction using the marine amphipod *Leptocheirus plumulosus.* According to MCA's Stage I Environmental Screening and Stage II Environmental Risk Characterization, four of the five samples from the property showed significantly reduced survival, growth, or reproduction relative to the local conditions samples. MCA also collected soft-shell clams (*Mya arenaria*) for tissue analyses and determined that arsenic and copper exceeded the levels associated with adverse toxicological effects to benthic invertebrates. Based on the results of these two lines of evidence, MCA concluded that OHM in the sediment presented a significant risk of harm to benthic invertebrates.

[7] MCA used the following criteria to determine where the local conditions samples were to be collected: located on the Mystic River, not in a dredged channel, sediment types representative of those found at the site, and not located near any point sources of contamination. See page 21 of MCA's 2006 Stage I Ecological Screening and II Environmental Risk Characterization for more details.

In 2006, MCA also collected general water quality measurements (temperature, specific conductance, dissolved oxygen (DO), and pH) and concluded that surface water was not a significant exposure pathway.

3.2 GZA Investigations (2013-2015)

GZA performed a sediment coring and sampling program in August 2013 and March-April 2015. GZA also sampled surface water and groundwater seeps in May 2015. These programs were previously described in detail in the GZA Supplemental Phase II Report (GZA, 2015b). As this Revised Phase II Report relies heavily on the data collected by GZA, a brief summary of GZA's sampling programs is presented below. Copies of GZA's laboratory analytical reports and sediment core logs are included in **Appendices A to F**.

3.2.1 Surface Water and Groundwater Seep Sampling

3.2.1.1 Methods

Four near-shore surface water (SW) samples and two groundwater seep samples (SWS) were collected form the intertidal zone on May 21 and 22, 2015 (**Figure 2**). Surface water and seep samples were analyzed for SVOCs, PAHs, EPH fractions, dissolved MCP 14 metals, and hexavalent chromium by ESS Laboratory (ESS). The analytical laboratory reports for the surface water and groundwater seep samples are presented in **Appendix A**. Field parameters (temperature, pH, DO, conductivity, and turbidity) were also measured at each sample location.

3.2.1.2 Results & Interpretation

Table 1 (originally presented in GZA, 2015b) shows field parameters measured at each surface water and groundwater seep sampling location. **Table 2A** (originally presented in GZA, 2015b) summarizes analytical results for SVOCs, and **Table 2B** (originally presented by GZA, 2015b) summarizes results for dissolved metals and EPH along with surface water quality benchmarks (WQBs). The concentration of arsenic in one groundwater seep (SWS-3) was above the WQB; however, the concentration in the nearby surface water sample (SW-3) was below the WQB. Therefore, GZA concluded "*…arsenic is diluted to concentrations below toxic levels upon discharge to surface water, and this mitigative effect is likely to be more pronounced during high tide.*"[8] Concentrations of SVOCs and PAHs in the surface water and groundwater seep samples were below WQBs. EPH fractions were detected in only two samples, SWS-3 and SW-6, and at concentrations above WQBs. GZA concluded that these detections were likely due to particulates in the samples and therefore were not considered toxic[9]. AMEC agrees with this conclusion.

[8] GZA, 2015b p. 11.
[9] GZA, 2015b p. 11.

3.2.2 Sediment Sampling

3.2.2.1 Methods

GZA performed sediment coring and sampling programs in August 2013 and March-April 2015. Approximately 200 sediment samples from 60 locations were collected from within and upstream of the Site on an approximately 100-foot grid pattern (locations denoted as "GZ-101 to GZ-140 and GZ-201 to GZ-226 on **Figure 2**)**.**

In addition, GZA collected samples from the Mystic River channel upstream and downstream of the Amelia Earhart Dam at the locations shown on **Figure 3**. These samples were collected as part of GZA's efforts to characterize local conditions. The samples from the upstream locations (GZ-LC-1 through -10 on **Figure 3**) were not used by GZA in their evaluation as GZA did not consider those locations to be representative of local conditions.[10] As described in Section of this Report, a subset of these samples have been included in an updated local conditions dataset.

GZA collected a sediment core and a grab sample at each sample location. Sediment core logs are included in **Appendix B**. Targeted depth intervals for samples in the sediment cores were 0.5 to 2 feet (ft), 2 to 4 ft, 4 to 6 ft, 6 to 8 ft and 8 to 10 ft below the sediment surface (bss), though not all intervals were characterized at all locations. GZA divided the sediment samples into the following categories based on depth:

- "surficial" = 0 to 0.5 ft bss (grab samples);
- "shallow" = 0 to 2 ft bss (includes samples from both the 0 to 0.5 ft bss and 0.5 to 2 ft bss depth intervals);
- "deeper" = those samples collected at depth intervals greater than 2 ft bss.

Sediment samples were analyzed by ESS Laboratory. Samples were analyzed for SVOCs, PAHs, EPH fractions, MCP 14 metals, and total organic carbon (TOC), though not all samples were analyzed for all targeted compounds.[11] The analytical laboratory reports for the chemical analyses of sediment samples are presented in **Appendix C**.

Grain size sieve analyses were also performed for 62 of the sediment samples collected during the 2013 sampling round. Laboratory reports for the sieve analyses are presented in **Appendix D**.

Six samples from the property collected in 2013 and nine samples collected from the property in 2015 were subjected to 28-day whole sediment toxicity tests with the same marine amphipod (*Leptocheirus plumulosus)* used by MCA in the previous toxicity testing[12]. As with the MCA

[10] GZA stated "Because most of the 2013 upstream sample locations were in close proximity to other former MCP release sites, and several of the samples were highly contaminated, GZA was concerned that those samples may be within the boundaries of other MCP Sites and not representative of Local Conditions. GZA, 2015b, p. 13.
[11] GZA justified this approach as providing "general data coverage within the study area and at various depths." GZA, 2015b; p. 13.
[12] In 2015, GZA also performed toxicity test on three samples originally identified as local conditions samples (LC-102, LC-105, and LC-112). However, as described in Section 5 these samples have subsequently been removed from the local conditions dataset.

toxicity tests, endpoints were amphipod survival, growth (biomass), and reproduction. Sediment toxicity testing was performed by New England Bioassay of Manchester, Connecticut, a division of GZA. According to GZA, "[s]*amples used for toxicity tests were 'co-located' with chemical analysis samples; the samples for chemical analyses and toxicity tests were field split samples collected from the same mixing bowl after homogenization.*"[13] Laboratory reports for these toxicity tests are included in **Appendix E**.

In 2015, GZA also collected samples from 18 locations (GZ-1 through GZ-18 on **Figure 2**) from the eastern portion of the embayment in the 0-3 ft interval to support a 401 Water Quality Certification application for proposed navigational dredging. These samples were analyzed for SVOCs, PAHs, EPH fractions, MCP 14 metals, and total organic carbon (TOC); 13 samples were also analyzed for VOCs. GZA did not include data from those locations in the GZA Supplemental Phase II Report[14] and these data were not further discussed by GZA. AMEC has not used the data in this report as the analytical samples were composites rather than from discrete locations.

3.2.2.2 Results & Interpretation

GZA described the sediments as generally consisting of "*…fine-grained material with varying amounts of organics* [i.e., organic sediments]. *The material within about 0 to 5 feet bss was predominately clayey silt with varying amounts of organics. Below about 5 feet bss sediments were typically stratified layers of sand and silt, with some locations containing organic silt and clay*."[15]

Table 3A – Table 3E (originally presented in GZA, 2015b) summarize the analytical data for the sediment samples along with sediment screening benchmarks for the protection of benthic organisms in marine environments. The primary source of the sediment benchmarks were the Effect Range-Low (ER-L) and Effects Range-Median (ER-M) values developed by Long *et al.* (1995). If an ER-L or ER-M was not available for a contaminant, GZA consulted other sources of comparable marine sediment benchmarks published by regulatory agencies or otherwise available in the scientific literature. The table notes cite the sources of the sediment benchmarks used by GZA.

Table 4A (originally presented in GZA, 2015b) and **Table 4B**[16] (modified from Table 4B originally presented in GZA, 2015b) summarize the results of the 2013 and 2015 toxicity tests, respectively. None of the 2013 samples resulted in statistically significantly lower survival rates compared to the lab control (**Table 4A**). Four of the six samples resulted in reduced biomass compared to the lab control (GZ-104, GZ-114, GZ-126, and GZ-137; **Table 4A**). Each of the six samples exhibited statistically significant reproductive impairment relative to the lab control. Therefore, GZA

[13] GZA, 2015b; p. 15.

[14] "*Sediment represented by those samples will be dredged for navigation regardless of whether they present a risk to the environment…"* GZA, 2015b; p. 12.

[15] GZA, 2015b; p. 14.

[16] Table 4B has been modified from what was presented in the GZA Supplemental Phase II Report to remove comparisons to local conditions samples. This was done as the local conditions dataset has changed as discussed in Section 5 of this report.

considered each of the 2013 samples to exhibit toxicity. As discussed in Section 6, AMEC's ecological risk characterization did not require the use of the toxicity test results.

As shown on **Table 4B,** survival in both the artificial and natural laboratory control sediments in 2015 was below 80%, which is outside the permissible test tolerance limits (USEPA, 2001). Low survival rates in the lab control may suggest that the test specimens were unhealthy or otherwise defective, or that they were improperly handled by the lab. In AMEC's opinion, this calls into question the validity of the survival, growth, and reproduction measurements of the remaining Site samples. As discussed in Section 6, AMEC's ecological risk characterization did not require the use of the toxicity test results.

4.0 CONCEPTUAL SITE MODEL

4.1 Potential Sources and Release Mechanisms

4.1.1 Site-Related Sources

The Site includes both an upland area and sediments in the Mystic River. The upland portion consists of approximately 22 acres above mean high water. This area was the location of chemical manufacturing facilities (primarily sulfuric acid and alcohols) for over 100 years. Portions of the upland property were also filled at various times with dredged materials (and potentially manufacturing wastes) which resulted in the current configuration[17]. Chemical manufacturing operations began in the 1800s and continued through the late 1960s. The buildings were demolished in the late 1960s and 1970s and the property was generally vacant by about 1980. Beginning in the mid-1990s the upland areas were used as a material storage and staging yard. Remediation of the upland portion of the Site is currently being conducted under a Release Abatement Measure (RAM).

Historical manufacturing operations and processes resulted in the release of metals (e.g., arsenic, lead, and vanadium) to the upland portion of the Site, evidenced by the presence of impacted subsurface soil (e.g., the CES-2 Area shown on **Figure 2**). Based on historical information, specific metals of concern are arsenic, lead and vanadium:

- A material used to dry sulfur during on-Site sulfuric acid production reportedly contained arsenic,
- A "lead storage house" formerly occupied a portion of the Site, and
- Vanadium was widely used as a catalyst in the production of sulfuric acid beginning in the 1930s.

In addition, the production of sulfuric acid on the upland portion of the Site resulted in areas of low pH in groundwater (**Figure 2**).

Spillage during loading and unloading of raw materials on and near the water, principally along the northern and northeastern side of the embayment, likely contributed contaminants directly to sediment. As first noted by Tetra Tech Rizzo (2007) and subsequently confirmed by GZA (2015b), the highest concentrations of metals have generally been measured in the northern and northeastern parts of the embayment where materials were historically loaded and unloaded.

[17] Dredging and filling occurred over time and under a number of different licenses. As noted in the Combined 401 Water Quality Certification (MassDEP, 2016a), the last known dredging of the embayment occurred in 1943.

4.1.2 Non-Site Sources

A secondary area of high metals concentrations has been observed along a tidal channel in the flats on the south side of the embayment. This is likely associated with a drain pipe outlet located on Boston Water and Sewer Commission property to the south.

Phthalates and PCBs associated with the historical operations on the adjacent Monsanto West property have also been detected in sediments on the Wynn property. However, the spatial distribution of phthalates and PCBs in sediments is different than that of the metals which are attributed to Site operations. The distribution of phthalates and PCBs is consistent with a different (non-Site) source of these chemicals.

The widespread presence of low levels of PAHs and petroleum hydrocarbons in sediments on the property can, at least partially, be attributed to other industrial and anthropogenic sources (e.g., stormwater runoff[18], industrial releases, and shipping-related impacts). The Mystic River is a very urbanized watershed and the river and adjacent land areas have a very long history of commercial and industrial uses.

4.2 Potential Migration Pathways

Contaminated soils from the upland portion of the Site likely eroded and migrated directly to the Mystic River via overland flow. This migration path is likely to be eliminated in the future due to ongoing remediation and redevelopment of the upland portion of the Site.

Low pH soil has caused metals (released from Site operations and naturally occurring) to leach from the subsurface fill into groundwater which discharges into the Mystic River. Under neutral pH conditions, the migration of metals in groundwater is limited by their low solubility and their tendency to adsorb to soil particles or precipitate out of groundwater. This migration path is likely to be limited in the future due to the recently completed in-situ treatment of soil and groundwater in the low pH area and excavation and off-site disposal of soil from the CES-2 area. Based on the results of surface water investigations performed by MCA and GZA prior to treatment, discharge of impacted groundwater is not significantly or negatively impacting surface water because of dilution.

The embayment has reportedly not been dredged since 1943 which predates the end of chemical manufacturing operations.[19] Sediments within the embayment do not appear to be transported out of the embayment by tidal currents. The low concentrations in sediment on the northern tidal flats (e.g. GZ-125, GZ-129, GZ-130, and GZ-131) compared to concentrations in the channel (e.g., GZ-112, GZ-115, and GZ-117) indicate little to no tidal transport in an upstream direction (towards the dam). The presence of higher concentrations at depth in the channel and close to

[18] For example, historical plans of the property indicate a drain pipe outlet located on the Boston Water and Sewer Commission property to the south and a 36-inch drain leading from the MBTA property to the north.
[19] MassDEP, 2016a; p. 2.

the uplands indicates that the embayment is a depositional area (i.e., sediment from other areas is being deposited on top of the sediment impacted by historical releases related to the Site). This is supported by the relatively narrow range in concentrations observed along the channel bottom (e.g., GZ-117, GZ-119, GZ-121, GZ-123, GZ-128, GZ-134, and GZ-138). If the historic contamination was eroding and being transported into the Mystic River, the contaminant concentrations would increase towards the river (i.e., to the south) and impacted sediment would be expected to accumulated in the deeper hole at the edge of the property (i.e., where GZ-201 is located). However, the analytical data do not support this erosional scenario. Based on the evidence, migration of sediment out of the embayment via natural processes is not expected to have been a significant migration pathway in the past or be one in the future.

4.3 Potential Exposure Routes and Receptors

The primary potential human exposure pathway is dermal contact with sediment when wading in the nearshore. However, access to sediment is partially limited by a fence and bulkhead. Another potential exposure route for humans is the consumption of fish which might have accumulated Site-related chemicals in their tissues. The Massachusetts Department of Public Health (DPH) has placed a P6 fish advisory[20] on fish consumption for the freshwater portion of the Mystic River upstream of the dam (which therefore does not cover the Site). In addition, DPH has separately placed a less stringent advisory for certain marine species within Boston Harbor.[21] While DPH does not appear to have mapped the extent of their definition of Boston Harbor, it is presumed to extend upstream in the Mystic River to the dam. Therefore, it is possible, but unlikely, that humans could be catching and consuming fish which are contaminated with Site-related chemicals.

The Mystic River below the Amelia Earhart Dam serves as habitat for fish, shellfish, benthic invertebrates, waterfowl, and semi-aquatic mammals (GZA, 2015b). The primary exposure pathways for ecological receptors are direct contact with sediments, incidental sediment ingestion, and consumption of contaminated prey.

[20] DPH defines P6 as “no one should consume any fish from this waterbody.” See MassDPH, 2016a.
[21] MassDPH, 2016b.

5.0 LOCAL CONDITIONS AND SITE BOUNDARY

The MassDEP's Guidance for Disposal Site Risk Characterization in Support of the Massachusetts Contingency Plan (MassDEP, 1996) defines "local conditions" as "…*levels of OHM present consistently and uniformly throughout the surface water body, or throughout a larger section of a river that contains the area potentially affected by contamination at or from the site.*"[22] The "local conditions" concept acknowledges that sediments in certain water bodies, particularly those located in industrial urban areas, contain constituents from sources such as other disposal sites, permitted discharges, and non-point sources.

The concept of "local conditions" is fundamental to determining the boundary of contamination from the Site which extends into a highly urbanized and industrialized waterway like the Mystic River. Local conditions represent the point beyond which exposure to potentially Site-related constituents may not be discernible from ubiquitous conditions that would likely exist in the absence of releases from the Site. Therefore, it also represents a point beyond which the incremental Site-related risks may not be quantifiable.

5.1 Development of Local Conditions Dataset

MassDEP guidance states that local conditions samples should be collected from "*Physically similar nearby sections of a river…*"[23] MassDEP has also stated that their preference is for locations which are upstream from the site of interest in order to avoid questions about whether specific chemicals detected in sediment are site-related or not.[24] The presence of the dam upstream from the Wynn property, which separates tidal/non-tidal and freshwater/brackish sections of the Mystic River, complicates the selection of potential local conditions sample locations.

As previously noted, in 2013, GZA collected samples from 10 locations upstream of the Wynn property (both upstream and downstream of the dam) for potential use as a local conditions dataset (locations LC-1 through LC-10 on **Figure 3**). However, for the 2015 Supplemental Phase II Report, GZA ultimately selected 12 different locations in the Mystic River downstream of the dam (locations LC-101 through LC-112 on **Figure 3)** for use as a local conditions dataset. However, MassDEP questioned the representativeness of these local conditions samples that had been collected to date, and requested samples from upstream of the dam and Monsanto West be included in the CSA[25]. MassDEP subsequently provided a report by Wehran Engineering Corporation (Wehran) prepared for MassDEP (then known as the Department for Environmental Quality Engineering, or DEQE) which included chemical concentrations in sediment in the Mystic, Malden, and Island End rivers (Wehran, 1989). A 2005 United States Geological Survey (USGS) report that characterizes sediment quality of lakes, rivers, and estuaries in the Mystic River Basin

[22] MassDEP, 1996. Section 9.4.2.1, p. 9-56.
[23] MassDEP, 1996. Section 9.4.2.1, p. 9-56.
[24] Personal communication from John Fitzgerald (MassDEP) during meeting with Wynn, AMEC, and GZA on November 18, 2016.
[25] MassDEP, 2016d.

(Breault *et al.*, 2005) was also identified. By agreement with MassDEP (MassDEP, 2016e), a local conditions dataset has been developed using a subset of the local conditions samples collected by GZA, and supplemented with selected data from the Wehran and USGS reports. The local conditions dataset is presented in **Table 5** and the sample locations are shown on **Figure 4**. Specific details of the datasets and the rationale for the inclusion or exclusion of certain samples are provided below:

- **Wehran (1989).** Approximately 60 sediment samples were collected from 44 locations in the Mystic River between the General Lawrence Bridge (Route 16 overpass on the Mystic River) in Medford down to the Tobin Bridge, as well as along the Malden River down from Charles Street, Malden. Sample intervals varied from the top six inches of the sediment surface down to ten feet and were analyzed for numerous chemicals including PAHs, PCBs, and metals. According to the study report, sample locations were selected in order to target known or suspected releases. In AMEC's opinion, this resulted in a study with sediment concentrations that were biased high compared to local conditions, and so many of these locations were excluded from the local conditions dataset. Five of the Wehran samples (SD-28, SD-34, SD-41, SD-42, and SD-44 on **Figure 4**) were included in the local conditions dataset because they were 1) located upstream of the Site, 2) not believed to be associated with specific known or suspected releases and discharges, and 3) collected from the 0-6 inch depth interval.

- **USGS/Breault *et al.* (2005)**. Over 100 sediment samples were collected from the Lower Mystic Lake, Mystic River, Alewife Brook, Malden River, Island End River, Chelsea and Mill creeks, and Boston Inner Harbor sediments. Samples targeted substrate two to four inches below the sediment surface and were analyzed for the presence of numerous chemicals including PAHs, PCBs, and metals. AMEC considers the USGS study to be unbiased in that it did not directly target known or suspected releases and discharges. Nevertheless, some of these data did characterize sediment affected by known or suspected releases, and thus were excluded from the local conditions dataset.[26] In addition, all samples located downstream of the Wynn property were also eliminated from the local conditions dataset. In total, 43 samples from the USGS report (Samples 8-42, and 44-50 on **Figure 4**) were retained as local conditions samples.

- **GZA (2013-2015)**. As previously noted, sediment samples were collected from 22 locations in an effort to characterize local conditions. Of these, five samples (GZ-LC-6 through GZ-LC-10 on **Figures 3 and 4**) collected in 2013 were included in the local conditions dataset. These samples were collected from the 0-6 inch interval and are located immediately upstream of the Amelia Earhart Dam. MassDEP had expressed concern that the other samples may be associated with other known or suspected releases or discharges.

[26] For example, MassDEP expressed concern that samples collected from Mystic Lake (samples 1 through 7) were likely affected by the Industriplex Superfund site, especially with respect to arsenic. Sample 44 is associated with Little Creek, a tributary to the Malden River which was historically affected by manufacturing activities and which is a major receiving body of stormwater runoff. Therefore, this sample was excluded. MassDEP also expressed concern that Samples 51 through 56 may have been affected by the former Monsanto West site.

In total, the local conditions dataset agreed upon with MassDEP consists of 53 samples collected from the Mystic River between its outflow at Mystic Lake and the Amelia Earhart Dam, and from the Malden River between Charles Street (Malden) and its confluence with the Mystic River. Samples were limited to the 0-6 inch depth interval because this interval is considered the zone of highest biological activity, particularly for fine grained sediments. The local conditions dataset is large enough to minimize the influence of localized sources. In addition, the larger dataset provides significant statistical power and is well-suited for calculating descriptive statistics.

For some chemicals, the local conditions dataset consists of a subset of these 53 samples.

- Mercury was not analyzed in any of the USGS samples included in the 53 sample local conditions database, but were analyzed in the five Wehran samples and five GZA samples. Though not as robust as the full 53 sample dataset, ten samples is above the minimum of eight samples which MassDEP and USEPA recommend to support a statistical analyses of environmental samples (MassDEP, 2011; USEPA, 2009; USEPA 2016a).
- Phthalates, specifically bis(2-ethylhexyl)phthalate or BEHP which is known to be associated with the Monsanto West property, and EPH factions were analyzed in only the five GZA samples, fewer than the minimum recommended number of eight. Therefore, local conditions statistics were not calculated for BEHP.

5.2 Site-Related Chemicals of Concern

As discussed in Section 4.1, the sediments in the Mystic River adjacent to the Wynn property have been impacted primarily by metals due to historical manufacturing processes and operations on the uplands. In addition, chemicals associated with operations on the former Monsanto West property (i.e., phthalates and PCBs) and chemicals which are likely attributable to local conditions (PAHs and petroleum) have also been detected.

In order to more quantitatively define the Site-related chemicals of concern for which Wynn bears responsibility, the compounds detected in the 0-6 inch interval on the property were compared to the local conditions dataset described in the previous section. This was done through a comparison of the Site concentrations to local conditions concentrations using the maximum concentration and median concentration of each chemical (**Table 6**). This process is analogous to the one for evaluating background in soil laid out in Section 2.3.3.2 of MassDEP's Guidance for Disposal Site Risk Characterization (MassDEP, 1995). While initially developed for background comparisons, MassDEP also supports this process for comparing site conditions to local conditions

Through this process and by agreement with MassDEP, we have identified arsenic, lead, mercury, and vanadium as the Site-related chemicals of concern. The concentrations of these four chemicals in sediment are depicted on **Figures 5 to 8**.

5.3 Disposal Site Boundary

The disposal boundary depicted on **Figure 9** was drawn to separate areas where concentrations of Site-related chemicals are above a local condition value from areas where concentrations are generally at or below the local condition value. The disposal boundary was also drawn considering the CSM (Section 4) and principles of sediment transport dynamics. Delineating the extent of Site-related chemicals in sediment based on the local conditions data indicates the maximum potential extent of the aquatic boundary. Given the many historical and ongoing sources of contamination to the Mystic River (as well as natural sources of the same chemicals) this may still be an over-estimate of the impacts directly associated with chemical manufacturing on the upland portion of the Wynn property.

By agreement with MassDEP, the 75th percentile statistic was conservatively used to determine the local condition concentration for each chemical (**Table 8**).These local condition concentrations were then used to draw the disposal site boundary. The 75th percentile concentration is the more conservative than the 90th percentile concentration that MassDEP used to derive background soil values for metals (MassDEP, 1995), and more recently, PAHs (MassDEP, 2002). As explained in Section 2.3.2.1 of MassDEP's Guidance for Disposal Site Risk Characterization (MassDEP, 1995), *"…a high (e.g., 90th) percentile was chosen in order to insure that chemicals which are truly present at background levels would be correctly identified as such."* MassDEP has previously accepted a 90th percentile statistic to define the "aquatic site boundary" for the Former Coal Tar Processing Facility Site on the Island End River (AMEC, 2003 and ARCADIS, 2009).

The disposal site boundary on **Figure 9** includes those areas where one or more Site-related chemicals was present at concentrations above the 75th percentile value. Three locations (GZ-124, GZ-136, and GZ-211) were not included within the disposal site boundary for the following reasons:

- one constituent only (arsenic) slightly exceeded the 75th percentile value,
- the surrounding samples were consistent with local conditions, and
- sediment transport mechanisms are not likely to have resulted in the deposition of Site-related chemicals at these locations.

The disposal site boundary on **Figure 9** is approximately 7.8 acres. This main area in the embayment encompasses approximately 7.3 acres and the smaller area to the west is approximately 0.5 acres.

The disposal site boundary does not extend beyond the Wynn property boundary. AMEC believes that the extent of Site-related chemicals has been delineated to the extent practical. Concentrations of each Site-related chemical in sediment are either below or approaching the conservative 75th percentile value at the property boundary. In addition, as discussed in Section 4.2, AMEC believes the embayment to be a depositional environment rather than an erosional

one. Therefore, concentrations within and on the periphery of the deep channel are more representative of recent sediment being transported into the embayment (i.e., local conditions).

6.0 ECOLOGICAL RISK CHARACTERIZATION

This Method 3 Stage I Environmental Screening (ES), which identifies whether potentially significant exposures exist in the sediment within the Disposal Site boundary, was performed following:

- Regulations for a Method 3 Environmental Risk Characterization (310 CMR 40.0995) (MassDEP, 2014)
- Guidance for Disposal Site Risk Characterization (MassDEP, 1995; 1996),
- MassDEP Interim Technical Updates (MassDEP, 2006), and
- Other ecological risk assessment best management practices.

The objective of the Stage I ES is to identify and document conditions which do not warrant a Stage II Ecological Risk Characterization (ERC), either because of the absence of a potentially significant exposure pathway or because environmental harm is readily apparent and therefore additional assessment would be redundant.

Following a Stage I Environmental Screening, it may be concluded that:

1. A Stage II ERC is not required because there are no complete exposure pathways that could result in potentially significant exposures, and a condition of No Significant Risk of harm to Site biota and habitats clearly exists;
2. A Stage II ERC is not required because, for each contaminated medium, harm is readily apparent; therefore a condition of No Significant Risk of harm to the Site biota and habitats clearly does not exist, and a Stage II Environmental Risk Characterization would be redundant;
3. A Stage II ERC is required because, for one or more contaminated media, there is not enough information to determine whether or not a condition of No Significant Risk of harm exists, and therefore those media are considered to present "potentially significant exposures."

If potentially significant exposures exist, the Stage I ES can be used to guide further response actions including removal actions.

MCA previously conducted a Stage I ES and a Stage II ERC (MCA, 2006) which demonstrated:

- A condition of No Significant Risk to surface water based on modeled groundwater discharge from Site uplands to the embayment.
- A condition of No Significant Risk to shorebirds and other wildlife populations exposed to sediment based food chain models.

Based on the findings of the previous risk assessments, the present Stage I ES only evaluates risk to benthic invertebrates exposed to Site sediment.

6.1 Environmental Setting and Complete Exposure Pathways

As previously noted, the Wynn property includes approximately 13 acres of sediment within the Lower Mystic River. As explained in Section 5, the Site boundary encompasses approximately 7.8 acres **(Figure 9)**. Located downstream of the Amelia Earhart Dam, this portion of the Lower Mystic River has been classified by MassDEP and other state and federal agencies as a marine surface water body that serves as habitat for fish, shellfish, benthic invertebrates, waterfowl, and semi-aquatic mammals (GZA, 2015b). A detailed description of the ecological resources, and sediment and aquatic communities present at and around the Site was previously presented in Section 2.3 of the GZA Supplemental Phase II Report which is included as **Appendix G**.

The MassDEP Bureau of Waste Site Cleanup Phase I Site Assessment Map for the Site **(Figure 10)** does not identify any areas of Critical Environmental Concern (ACEC) within 0.5 miles of the Site. The Site Assessment Map also indicates that no state-listed species are located within 0.5 miles of the Site. The US Fish and Wildlife Service (USFWS) online mapper does not identify any critical habitat for threatened and endangered species within the Lower Mystic River (USFWS, 2016).

Considering the presence of aquatic and benthic species observed during previous Site investigations, sediment exposure pathways are considered potentially complete.

6.2 Evaluation of Readily Apparent Harm

Site conditions do not satisfy any of the three criteria listed in 310 CMR 40.0095(3)(b)(1) needed to meet Readily Apparent Harm:

- Stressed biota, including fish kills or abiotic conditions have not been reported.
- As previously demonstrated (MCA, 2006), estimated concentrations were below water quality benchmarks including USEPA Ambient Water Quality Criteria and Massachusetts Surface Water Standards, and a condition of No Significant Risk exists for surface water.
- Oil, tar, or other non-aqueous phase hazardous material have not been observed within one foot of the sediment surface.

Therefore, Readily Apparent Harm does not exist at the Site.

6.3 Effects-Based Screening

In this section, each complete exposure pathway is evaluated to determine whether the exposures are significant. If significant exposures are determined to be unlikely for any pathway, that pathway can be eliminated from further consideration in the risk assessment.

Screening criteria are used to rule out pathways, not individual chemicals. If a pathway is not ruled out, risks from all chemicals that result in exposure by that pathway should be further evaluated, even if some of the chemicals are present at levels below their screening criteria.

The effects-based screening was conducted by comparing the maximum detected bulk sediment concentrations to corresponding ecological screening benchmarks.

Consistent with MassDEP guidance (MassDEP, 1996), only those compounds with concentrations that are not consistent with local conditions and compounds for which local conditions data are unavailable (see Section 5.2) were compared to ecological sediment screening benchmarks.

Screening benchmarks are discussed in Section 6.3.1 and the benchmark comparison is presented in Section 6.3.2.

6.3.1 Ecological Screening Benchmarks

Marine sediment benchmarks **(Table 7)** were preferentially selected from the following source:

- NOAA Effects Range - Medium (ER-M) (Long *et al.*, 1995)

ER-Ms have been previously used on this project (GZA, 2015b), and have been agreed to with MassDEP (MassDEP, 2016b).

Where a compound lacked an ER-M, sediment benchmarks were selected from among the following sources:

- Washington State Apparent Effects Thresholds (AETs) (Washington State, 2013)
- NOAA Screening Quick References Tables (Buchman, 2008)

6.3.2 Benchmark Comparison

The maximum detected concentrations of Site-related compounds in sediment within the Disposal Site Boundary were compared to effects-based ecological screening benchmarks to determine whether current and potential future exposure could potentially be significant (**Table 7**). Note that when performing benchmark comparisons, Site concentrations were rounded to two digits in accordance with MassDEP's guidance on significant figures (MassDEP, 2009).

An analyte with a maximum detected concentration above its benchmark was identified as a potentially significant exposure.

- The maximum detected concentration of total PAHs, several individual PAHs, antimony, cadmium, and chromium were **below** conservative ecological screening benchmarks.
- The maximum detected concentration of several individual PAHs, arsenic, lead, mercury, nickel, selenium, silver, vanadium, and zinc were **above** conservative ecological screening benchmarks.
- EPH fractions lacked screening benchmarks and thus could not be evaluated. Beryllium also lacked a screening benchmark but was consistent with local conditions.

Since concentrations in sediment exceed benchmarks, a condition of No Significant Risk does not exist with respect to Site sediment.

6.4 Stage I ES Summary and Conclusions

The previous Stage I ES (MCA, 2006) demonstrated that a condition if No Significant Risk exists for surface water. The 2006 Stage II ERC (MCA, 2006) demonstrated that a condition of No Significant Risk exists for shorebirds and other shoreline wildlife.

The present Stage I ES concludes that there are potentially significant exposure pathways with respect to the benthic community exposed to sediment. Therefore, remedial actions are necessary to address these pathways in order to achieve a condition of No Significant Risk.

7.0 HUMAN HEALTH RISK CHARACTERIZATION

The purpose of the human health risk characterization is to address potential risks resulting from exposure to impacted sediment.

7.1 Previous Risk Assessments

GEI prepared a Method 3 Risk Characterization as part of the 2012 Phase II Report. However, human exposure to sediment was not evaluated. Contact with sediment was *"…unlikely because access is partially limited by a chain link fence and bulkhead."*[27]

GZA performed "screening-level risk calculations" for a trespasser exposed to intertidal sediment under current conditions. These calculations, presented in Appendix J of the GZA Supplemental Phase II Report, used the maximum detected contaminant concentrations in shallow sediment samples collected from "wadable"[28] portions of the Mystic River sediments, and assumed that trespassers would access the intertidal zone once per week from April through mid-November (31 events). Based on these assumptions, GZA determined that a condition of No Significant Risk existed for a trespasser.[29]

GZA did not quantitatively evaluate the risk to human health from fish consumption in part because a Massachusetts Department of Public Health fish advisory is in place for the Mystic River. However, MassDEP stated in their April 2016 letter that "*…MassDEP personnel have observed fishing and shellfishing at other sites where fish advisories were in effect. In addition, MassDEP has received credible reports of people fishing along the shoreline in the vicinity of the site within the past year."*[30] MassDEP also stated *"…it may not be possible to determine fish tissue contaminant levels that are attributable to this site. However, for the record, MassDEP does not consider fish advisories to be components of permanent solutions at waste sites. If fish consumption is a concern do in part to contaminants from this site, the risk assessment should discuss the pathway and note the possible risk."*[31]

In their Supplemental Phase II Report, GZA stated that *"…the potential exposure of humans to water-side site contaminants via consumption of fish is also de minimis. Game fish that may be found within the water-side site and Lower Mystic River are transient, and are likely to be present for relatively short periods. Furthermore, the currently degraded environmental conditions of the Lower Mystic River result in a perpetual early successional benthic community consisting of low abundances of small individuals of opportunistic species. Such a community provides poor feeding grounds for epibenthic species (including bottom feeding fish). These factors likely further*

[27] GEI, 2012, p. 24.
[28] GZA defined this as above elevation -5 feet relative to the North American Vertical Datum of 1988 (NAVD88). GZA, 2015b p. 31.
[29] GZA's calculated risk estimates for trespassers did not exceed MCP risk limits. The non-cancer Hazard Index (HI) was 0.4 (the MCP risk limit is 1), while the Estimated Lifetime Cancer Risk (ELCR) was $1x10^{-5}$ (which is the MCP risk), with arsenic and lead as the drivers of the calculated risks.
[30] MassDEP, May 2016; p. 3.
[31] MassDEP, April 2016. p. 7-8.

reduce typical residence time for game fish at the water-side site." AMEC agrees that there may be potential risk from the consumption of infrequent/illegally caught fish. However, in our opinion a full fish study is not warranted given the current condition of the embayment and nearby portion of the Mystic River and the transient nature of the fish. In addition, Wynn does not intend to permit fishing once the resort is complete. Signs prohibiting fishing will be posted and Wynn staff (dock attendants and security) will enforce the restriction.

7.2 AMEC Method 3 Calculations

AMEC has prepared updated Method 3 calculations for OHM present in shallow (0 to 6 inches) sediment on the Wynn property. The human health risk associated with the sediment exposure by trespassers wading into the river has been evaluated based on shallow, "wadable" areas (i.e., areas above mean low water or elevation -5 ft NAVD88), which is a subset of the total area shown on **Figure 2**. The current evaluation includes a larger dataset from the wadable area than what was evaluated by GZA[32]. The risk from ingestion of locally caught fish has also been discussed. Primary OHM of concern from historical use of the Site and the river are: arsenic, lead, mercury, and vanadium.

The purpose of this risk characterization is to identify whether a condition of "No Significant Risk" of harm to human health exists or has been achieved at the Site.

7.2.1 Methodology

The Method 3 calculations are consistent with the requirements of 310 CMR 40.0000 Subpart I of the MCP and generally consistent with MassDEP's Guidance for Disposal Site Risk Characterization - In Support of the Massachusetts Contingency Plan (MassDEP, 1995) and current risk assessment practices in Massachusetts. The risk characterization evaluates potential risks to human health posed by Site conditions.

The Method 3 Human Health risk characterization evaluates the risk to current and foreseeable future land use and activities. Boating is a potential current and future use of the river; however, boating elicits minimal contact with sediment and surface water. As there are no current or foreseeable future uses of the Mystic River surface water or sediment that are likely to result in significant exposure to Site media, a conservative repeat trespasser scenario has been evaluated. This scenario is considered unlikely due to the degraded quality of the river, the local industrial development, and the current poor aesthetic conditions of the area. While Wynn's proposed efforts will certainly improve the conditions in the embayment, measures will also be taken to prevent resort patrons (or trespassers) from wading.

[32] GZA evaluated data from only seven locations (GZ-214, GZ-215, GZ-216, GZ-220, GZ-221, GZ-222, and GZ-223) rather than each location above -5 ft NAVD88.

It is also noted that Massachusetts DPH has placed a P6 fish advisory ("*no one should consume any fish from this water body*"[33]), on fish consumption for the stretch of the Mystic River located between the outlet of Lower Mystic Lake and Amelia Earhart Dam, which is approximately 600 feet upstream of the Site. The fish advisory is due to PCBs, Chlordane, and DDT which are not Site-related chemicals of concern. This fish advisory also refers to the freshwater habitat upstream of the dam, and is not applicable to the estuarine habitat below the dam. There is a separate fish advisory which covers Boston Harbor which may be more applicable to the habitat at the Site.[34] This advisory identifies lobsters, flounder, soft-shell clams, and bivalves, as animals that should be avoided for sensitive receptors. Given the industrial nature of the area and the difficulty of accessing the Site, use of the Site for recreational purposes including high frequency or subsistence fishing is highly unlikely. In addition, as previously noted Wynn does not intend to permit fishing once the resort is complete. Signs prohibiting fishing will be posted and Wynn staff (dock attendants and security) will enforce the restriction.

7.2.2 Human Health Conceptual Site Model

The CSM describes sources of releases to the environment, the receiving media, the migration pathways through which OHM may be transported or trans-located, and the possible receptors, including both human and environmental that may be exposed to OHM. The physical CSM for the Site (sources, migration pathways, receiving media) is described in detail in Section 4.0.

The relevant sources of contamination for sediment and fish tissue are summarized below:

- Waste chemicals and on-Site material storage: Historical use of upland portion of the Site as a chemical manufacturing facility up to the 1960s and subsequent use for material storage and staging.
- Local conditions: The Mystic River has historically been used as an industrial waterway, receiving various chemical wastes from upstream properties.

The relevant pathways are:

- Direct contact with sediment: Receptors may potentially be exposed to sediment 0 to 2 ft bss under a wading scenario by ingestion and dermal contact.
- Ingestion of fish: Receptors may be exposed to fish tissue through ingestion if they catch fish on the property. This pathway will only be assessed qualitatively.

The relevant receptors:

- Current and future trespassers: May be exposed to sediment 0 to 2 ft bss and may also catch local fish and ingest fish tissue.

[33] Massachusetts DPH, 2016a; p. 6.
[34] Massachusetts DPH, 2016b.

7.3 Hazard Identification

The dataset comprises 58 samples of shallow sediment (0 to 2 ft bss) collected from 34 locations in the area considered “wadable”, which AMEC defined as areas above mean low water (elevation -5 ft NAVD88). The dataset includes a larger area than GZA evaluated, and includes only field samples, no field duplicates were collected in this area. Samples were collected during sampling events conducted by GZA in 2013 and 2015 as part of the Phase II sampling program (**Figure 2**). OHM detected at least once are listed in **Table 9** and evaluated in this assessment.

All detected fractions/compounds were considered oil or hazardous material of potential concern (OHMPC).

No fish surveys were performed and no fish tissue samples were collected.

7.4 Exposure Assessment

In order to estimate daily intake, exposure assumptions are required. The exposure assessment assumes the same default trespasser exposure assumptions used in the MassDEP short forms for an 11 to 18 year old adolescent (**Table 10**), including a very conservative exposure frequency of 60 days per year (2 days per week in the warmer months of the year) for seven years. The only relevant exposure pathway is direct contact with shallow sediment by trespassers. In order to evaluate these pathways, the concentration at the point of exposure (EPCs) have been calculated for each OHMPC.

7.4.1 Identification of Exposure Point Concentrations

EPCs represent the concentration of OHM that a receptor is assumed to be exposed to. As no particular area of the Site is more likely for exposure than any other, and it is likely a trespasser would not be exposed to the whole area, a maximum detected value has been conservatively selected as the EPC. The EPC for all compounds detected at least once is shown on **Table 11**.

7.4.2 Quantification of Exposure Dose

Exposure dose equations estimate a receptor's daily intake of each compound. They are defined as the amount of a given OHMPC taken into the receptor, expressed in units of milligrams of OHMPC per kilogram of body weight per day (mg/kg-day). Procedures and equations were taken from the MCP risk characterization guidance (MassDEP, 1995). The exposure dose for the oral and dermal pathway is termed the Average Daily Dose (ADD). Chronic ADD is calculated for non-carcinogenic hazard calculations and Lifetime ADD is calculated for carcinogenic risk calculations.

7.5 Dose Response

The purpose of the dose-response assessment is to characterize the relationship between the quantity of OHM administered or received (dose) and the likelihood of adverse health effects in

the exposed population (response). The information on dose response is combined with the results of the exposure assessment to provide an estimate of potential health risk.

Selection of toxicity values for use in the risk assessment shall be in accordance with 310 CMR 40.0993(5); preference has been given to dose-response values derived by the MassDEP. MassDEP obtains dose-response values from:

- USEPA Integrated Risk Information System (IRIS) (USEPA, 2016b).
- USEPA Health Effects Assessment Summary Tables (HEAST) (USEPA, 1997)
- California EPA's Office of Environmental Health and Hazard Assessment (OEHHA) (CalEPA 2016a and 2016b)
- Provisional Peer-Reviewed Toxicity Values (PPRTVs) from the USEPA National Center for Environmental Assessment (NCEA) in Cincinnati, Ohio (ORNL, 2016).

Dose-response values for which the sources are IRIS were checked against the most recent update to the IRIS database (December 2016) to verify that up-to-date dose-response values were used in the risk assessment. The Reference Doses (RfDs) used in this evaluation are shown in **Table 12** and Cancer Slope Factors (CSFs) are shown in **Table 13**.

The algorithms for exposure are based on an absorbed dose; however, risk is calculated using toxicity factors, which are typically based on applied dose. MassDEP applies Relative Absorption Factors (RAFs) to account for the difference between absorbed dose and applied dose. If no value was available from MassDEP, a generic default was used. RAFs used in the risk characterization are presented in **Table 14**.

7.6 Risk Characterization

In this section, potential risks to human health associated with possible exposure to OHMPCs at the Site are characterized. Risk is a function of both exposure and toxicity. The magnitude of risk depends on the nature, duration, and frequency of exposure to OHM and characteristics of the exposed population. The calculations are presented in **Table 15**. A summary of cancer risk and non-cancer hazard for receptors is shown in **Table 16**.

7.6.1 Direct Contact with Sediment

Cancer risk is calculated as the Excess Lifetime Cancer Risk (ELCR). For a given OHMPC, the ELCR provides an upper-bound estimate of the potential cancer risk associated with a receptor's exposure to that chemical by that pathway. The ELCR is also called the Cumulative Receptor Cancer Risk (CRCR). The chemical-specific cancer risk is calculated as:

$$\text{CRCR/ELCR} = \text{Lifetime ADD (mg/kg/day)} \times \text{CSF (mg/kg/day)}^{-1}.$$

The non-cancer hazard is calculated as the hazard quotient (HQ) for individual chemicals and as the hazard index (HI) for multiple chemicals. The HI is also called the Cumulative Receptor Non-cancer Risk (CRNCR). The chemical-specific noncancer hazard quotient is calculated as:

CRNCR/HQ = Chronic ADD (mg/kg/day) / RfD (mg/kg/day)

To assist in interpretation of the calculated values, the CRNCR has been compared to the MCP Cumulative Receptor Non-cancer Risk Limit (CRNCRL) which is HI = 1. The CRCR has been compared to the Cumulative Receptor Cancer Risk Limit (CRCRL) which is 1×10^{-5}.

The HI for the current and future trespasser is 0.4. This is below the CRNCRL of 1. The Cumulative Receptor Cancer Risk is 5×10^{-6}, which is below the CRCRL of 1×10^{-5}.

7.6.2 Fish Ingestion

The Mystic River is a known fish habitat, however a fish survey was not considered necessary. Due to the transient nature of game fish, it would be difficult if not impossible to quantify the incremental risk from exposure to sediment at the Site. Therefore, no fish tissue data were available to evaluate the potential risk from fish tissue ingestion. However, given the limited fish advisory for the Boston Harbor, which is more lenient than the fish advisory upstream of the dam, it is considered likely that estuarine game fish at the Site would be less contaminated than the freshwater fish covered under the total fishing ban upstream. In addition, the degraded quality of the water body, the historical use by industrial properties, and the difficulty of accessing the Site, imply that any fishing would be infrequent. These factors, combined with the likely lower impacts to fish on the Site, indicate that additive risks from ingestion of locally caught fish by trespassers on-Site would not cause a condition of significant risk. The fish ingestion pathway is considered highly unlikely, and is likely to be incomplete currently due to the current poor aesthetics of the area, and the difficulty of accessing the river at the Site. While Wynn's proposed efforts will certainly improve the conditions in the embayment, measures will also be taken to prevent resort patrons (or trespassers) from wading. In the future, the pathway is likely to continue to be incomplete as fishing will be prohibited from the property and this restriction will be posted and enforced.

7.7 Human Health Risk Characterization Conclusions

A condition of No Significant Risk exists for current and future trespassers who might go wading along the shoreline. This conclusion is based on extremely conservative inputs (maximum detected concentration and 60 days of exposure per year for 7 years). A condition of No Significant Risk is also considered to exist for trespassers who catch and consume fish irregularly on the property. This pathway was not evaluated quantitatively as it is not considered a likely scenario.

8.0 DELINEATION OF AREA POSING A RISK

The risk characterizations presented in Sections 6 and 7 concluded that:

- A condition of No Significant Risk **has not** been achieved due to potentially significant ecological exposures of benthic invertebrates to sediment.
- A condition of No Significant Risk **does exist** for human health.

The Stage I ES (Section 6) considered all constituents present in the top six inches of sediment, including those attributable to non-Site sources (e.g. Monsanto West) and local conditions. As discussed above, per agreement with MassDEP, the chemicals for which Wynn has liability are arsenic, lead, mercury, and vanadium. The area where a condition of No Significant Risk has not yet been achieved for those chemicals has been defined using the higher of local conditions concentrations (75th percentile[35]) and ecological sediment screening benchmarks (ER-Ms or equivalent value) for arsenic, lead, mercury, and vanadium.

As shown on **Table 8**, the 75th percentile local conditions value for arsenic is below the ER-M, while the 75th percentile values for lead, mercury, and vanadium are above the ER-M. Therefore, the limits of risk for Site-related contaminants are defined by the ER-M for arsenic and the local conditions values for lead, mercury, and vanadium.

The areas where the concentrations of each chemical exceeded the applicable level (ER-M or local conditions) were plotted and then overlain on each other. The area of overlap between the areas where arsenic, lead, mercury, lead or vanadium would individually pose a risk produced the Site boundary shown on **Figure 9**. The area where lead exceeds local conditions and where arsenic exceeds the ER-M is limited to the northeastern portion of the embayment. Therefore, the limits of the area posing significant risk are largely defined by mercury and vanadium concentrations.

The total area within the Site boundary which poses a risk to benthic communities is approximately 7.4 acres. This includes 7.3 acres in the main embayment and 0.1 acres in the smaller area to the west (**Figure 9**).

- In the main embayment, the area posing a risk corresponds to the Site boundary. There are some locations which could be excluded from the area based strictly on concentration; however, AMEC has chosen not to do that as it did not make sense based on sediment transport mechanisms. For example, there are some locations near the tidal channel and grounded barges (e.g. GZ-221, GZ-222, and GZ-223) which could be excluded based on concentration; however, they are at the same depth as samples that do pose a risk (e.g. GZ-217 and GZ-224) and there is no clear mechanism to explain why erosion/sedimentation processes would differ between those locations.

[35] By agreement with MassDEP, the 75th percentile of the local conditions dataset has been used to estimate a local conditions concentration (MassDEP, 2016).

- In the small area to the west, defined by locations GZ-126, -127, -132, and -133, the area posing a risk (0.1 acres) is significantly smaller than the Site boundary (0.5 acres). This difference is due to the fact that only the concentration in GZ-127 exceeds the ER-M. The boundary of the area of risk has been estimated based on the concentrations present in the surrounding samples.

Remedial actions which are likely to achieve a condition of No Significant Risk and a Permanent Solution will be developed and evaluated as part of MCP Phase III and IV. These actions will likely include dredging, capping, or some combination of the two. The proposed navigational improvements and the impact of sediment transport dynamics will also be considered in the development and evaluation of remedial actions. By regulation (310 CMR 40.0995(3)(c)), concentrations that are less than or equal to the ecological screening benchmark meet a condition of No Significant Risk. Remediating to local conditions would also ensure that concentrations left in place would meet a condition of No Significant Risk. The MassDEP ecological risk assessment guidance document (MassDEP, 1996) states in Section 9.4.2.1 that *"…if concentrations of an OHM [oil and/or hazardous material] are consistent with local conditions, exposure to contaminants from the site may not be discernible, and thus the incremental risks may not be quantifiable*."

In order to achieve a Permanent Solution, a condition of No Significant Risk for all chemicals not attributable to local conditions will need to be achieved, and issues associated with survival, growth, and reproduction identified in toxicity tests will need to be addressed.

9.0 SUMMARY AND CONCLUSIONS

A 2012 Phase II Report prepared by GEI, which included a 2006 Ecological Risk Characterization completed by MCA, concluded that the sediments in the Mystic River adjacent to the Former Everett Staging Yard had 1) been impacted by releases from historical chemical manufacturing processes and operations and 2) posed a potential risk to benthic invertebrates. In December 2015, GZA submitted a Supplemental Phase II Report which contained the results from an extensive sampling program as well as an updated Site boundary and risk characterization. In May 2016, MassDEP issued a letter outlining a number of questions it had regarding the Supplemental Phase II Report and requesting additional assessment and/or data review. AMEC has prepared this Revised Phase II Report on behalf of Wynn in order to order to address MassDEP's questions.

A representative local conditions database was developed using samples collected by GZA as well as data from earlier studies by Wehran and the USGS. A comparison of the local conditions dataset to data from the Wynn property was used to help identify arsenic, mercury and vanadium as likely Site-related chemicals of concern. Lead was also identified as a likely Site-related chemical of concern based on historical land-side operations. Evaluation of the Wynn property data also identified chemicals associated with operations on the former Monsanto West property (i.e., phthalates and PCBs) and chemicals which are likely attributable to local conditions (PAHs and petroleum). The Site boundary for sediments, encompassing an area of approximately 7.8 acres, was delineated using the 75th percentile of the local conditions dataset for arsenic, lead, mercury, and vanadium. The area where a risk to the benthic community from Site-related chemicals exists encompasses an area of approximately 7.4 acres.

A Stage I Environmental Screening evaluated all constituents present in the top six inches of sediment, including those that are attributable to non-Site sources (e.g. Monsanto West) and local conditions. Based on a comparison of Site data to ecological benchmarks, AMEC concluded there are potentially significant exposure pathways with respect to the benthic community exposed to sediment. A Method 3 human health risk characterization concluded that a condition of No Significant Risk does exist for trespassers who might wade along the shoreline. A condition of No Significant Risk is also considered to exist for trespassers who might catch and consume fish irregularly on the property. Therefore, remedial actions are necessary to address exposure to impacted sediments by benthic organisms in order to achieve a condition of No Significant Risk.

Remedial actions which are likely to achieve a condition of No Significant Risk and a Permanent Solution will be developed and evaluated as part of MCP Phase III and IV. These actions will likely include dredging, capping, or some combination of the two. The proposed navigational improvements and the impact of sediment transport dynamics will also be considered in the development and evaluation of remedial actions. In order to achieve a Permanent Solution, a condition of No Significant Risk for all chemicals not attributable to local conditions will need to be

achieved, and issues associated with survival, growth, and reproduction identified in toxicity tests will need to be addressed.

Notes:
1. Results are presented in µg/L unless otherwise noted
2. "<" indicates that an analyte was tested for but not detected above the Reporting Limit (RL).
3. Water Quality Benchmarks for semi-volatile organic compound list are from the National Oceanic and Atmospheric Association Screening Quick Reference Tables; 2013. The chronic concentration values for salt water is listed. (http://response.restoration.noaa.gov/sites/default/files/SQuiRTs.pdf)
4. Water Quality Benchmarks for polycyclic aromatic hydrocarbon list are Final Chronic Values (FCVs) used to develop equlibrium partitioning benchmarks for PAHs in sediment. These FCVs were developed by the U.S. EPA, and are presented in Procedures for the Derivation of Equilibrum Partitioning Sediment Benchmarks (ESBs) for the Proection of Benthic Organisms: PAH Mixtures, EPA-600-R-02-013. November, 2003.

Notes:

1. Results are presented in µg/L unless otherwise noted
2. "<" indicates that an analyte was tested for but not detected above the Reporting Limit (RL).
3. Marine water benchmarks are from the following sources:
   a. US EPA National Recommended Water Quality Criteria; 2015. The criterion continuous concentration (CCC) for salt water is listed. (http://www.epa.gov/waterscience/criteria/). These valuses have been adopted by MassDEP as Massachusetts Water Quality Standards.
   b. Nation Oceanic and Atmospheric Administration (NOAA) Screening Quick Reference Tables; 2013. The chronic concentration for salt water is listed.(http://response.restoration.noaa.gov/sites/default/files/SQuiRTs.pdf)
   c. Final Chronic Values (FCVs) for surface water exposures developed by Battelle on behalf of MassDEP, presented in "Sediment Tocicity of Petroleum Hydrocarbon Fractions" 2007, and available at: http://www.mass.gov/eea/docs/dep/cleanup/laws/tphbat.pdf
   c'. Battelle notes that the C19-C36 Aliphatic fraction is likely NOT toxic because the LC50 (concentration that causes mortality of 50 percent of exposed organisms) is higher than the aqueous solubility. (For such chemicals, toxicity tests are performed with co-solvents.)
4. Bolded values indicate an exceedance of the Water Quality Benchmark concentration for the specific analyte.

Notes:

1. Results are presented in mg/kg unless otherwise noted.
2. "<" indicates that an analyte was tested for but not detected above the Method Reporting Limit (MRL). "-" indicates that an analyte was not tested for. "NA" indicates that a benchmark value is not available. "ND" indicates that an analyte was not detected.
3. Samples are designated as "Shallow" if any portion of the sample depth occurs within the uppermost 2 feet of sediment. All other samples are designated as "Deep."
4. Group designations are as follows: ON = On-Site, OFF-W = Off-Site West, OFF-E = Off-Site East, and LC = Local Conditions.
5. Marine sediment benchmarks are from the following sources:
    a. Effects Range - Low (ERL) and Effects Range - Median (ERM) Marine Sediment screening values from Long, et al., 1995.
    b. ERL and ERM equivalent Marine Sediment benchmark values from http://epa.gov/region5/waste/cars/pdfs/ecological-screening-levels-200308.pdf
6. Bolded values exceed the conservative ERL screening value.
7. Shaded values exceed the ERM benchmark value.
8. The LC-# series of samples are Local Conditions samples

Notes:

1. Results are presented in mg/kg unless otherwise noted.
2. "<" indicates that an analyte was tested for but not detected above the Method Reporting Limit (MRL). "-" indicates that an analyte was not tested for. "NA" indicates that a benchmark value is not available. "ND" indicates that an analyte was not detected.
3. Samples are designated as "Shallow" if any portion of the sample depth occurs within the uppermost 2 feet of sediment. All other samples are designated as "Deep."
4. Group designations are as follows: ON = On-Site, OFF-W = Off-Site West, OFF-E = Off-Site East, and LC = Local Conditions.
5. Marine sediment benchmarks are from the following sources:
    a. Effects Range - Low (ERL) and Effects Range - Median (ERM) Marine Sediment screening values from Long, et al., 1995.
6. Bolded values exceed the conservative ERL screening value.
7. Shaded values exceed the ERM benchmark value.
8. The LC-# series of samples are Local Conditions samples

Notes:

1. Results are presented in mg/kg unless otherwise noted.
2. "<" indicates that an analyte was tested for but not detected above the Method Reporting Limit (MRL). "-" indicates that an analyte was not tested for NA indicates that a benchmark value is not available.
3. Samples are designated as "Shallow" if any portion of the sample depth occurs within the uppermost 2 feet of sediment. All other samples are designated as "Deep."
4. Group designations are as follows: ON = On-Site, OFF-W = Off-Site West, OFF-E = Off-Site East, and LC = Local Conditions.
5. Marine sediment benchmarks are from the following sources:
    a. Effects Range - Low (ERL) and Effects Range - Median (ERM) Marine Sediment screening values from Long, et al., 1995.
    b. ERL and ERM equivalent Marine Sediment benchmark values from http://epa.gov/region5/waste/cars/pdfs/ecological-screening-levels-200308.pdf
6. Bolded values exceed the conservative ERL screening value.
7. Shaded values exceed the ERM benchmark value.
8. The LC-# series of samples are Local Conditions samples

Notes:

1. Results are presented in mg/kg unless otherwise noted.
2. "<" indicates that an analyte was tested for but not detected above the Method Reporting Limit (MRL). "-" indicates that an analyte was not tested for. NA indicates that a benchmark value is not available.
3. Samples are designated as "Shallow" if any portion of the sample depth occurs within the uppermost 2 feet of sediment. All other samples are designated as "Deep."
4. Group designations are as follows: ON = On-Site, OFF-W = Off-Site West, OFF-E = Off-Site East, and LC = Local Conditions.
5. Marine sediment benchmarks are from the following sources:
    a. Effects Range - Low (ERL) and Effects Range - Median (ERM) Marine Sediment screening values from Long, et al., 1995.
    b. ERL and ERM equivalent Marine Sediment benchmark values from http://epa.gov/region5/waste/cars/pdfs/ecological-screening-levels-200308.pdf
6. Bolded values exceed the conservative ERL screening value.
7. Shaded values exceed the ERM benchmark value.
8. The LC-# series of samples are Local Conditions samples

Notes:

1. Results are presented in mg/kg unless otherwise noted.
2. "<" indicates that an analyte was tested for but not detected above the Method Reporting Limit (MRL). "-" indicates that an analyte was not tested for. NA indicates that a benchmark value is not available.
3. Samples are designated as "Shallow" if any portion of the sample depth occurs within the uppermost 2 feet of sediment. All other samples are designated as "Deep."
4. Group designations are as follows: ON = On-Site, OFF-W = Off-Site West, OFF-E = Off-Site East, and LC = Local Conditions.
5. Marine sediment benchmarks are from the following sources:
    a. Effects Range - Low (ERL) and Effects Range - Median (ERM) Marine Sediment screening values from Long, et al., 1995.
    b. ERL and ERM equivalent Marine Sediment benchmark values from http://epa.gov/region5/waste/cars/pdfs/ecological-screening-levels-200308.pdf
6. Bolded values exceed the conservative ERL screening value.
7. Shaded values exceed the ERM benchmark value.
8. The LC-# series of samples are Local Conditions samples

2013 TOXICITY TEST RESULTS
Leptocheirus plumulosus 28-day Exposures

Wynn Resort Casino
Everett, Massachusetts

Sample ID	Percent Survival	Biomass (mg)	Reproduction (offspring)	Signficant Difference From Lab Control:			Arsenic	Lead	Mercury
				Survival	Biomass	Reproduction	(mg/kg)		
GZ-104T 0-0_5ft	54	0.3262	0.679		*	*	182	1070	2.51
GZ-114T 0-0_5ft	64	0.355	0.853		*	*	41.4	288	1.15
GZ-116T 0-0_5ft	86	0.8829	1.296			*	75.7	116	0.484
GZ-126T 0-0_5ft	84	0.3373	0		*	*	24.5	140	0.506
GZ-135T 0-0_5ft	94	0.8751	1.56			*	7.4	29.3	0.099
GZ-137T 0-0_5ft	82	0.4499	0.3		*	*	17.9	133	0.777
Laboratory Control	91	1.393	4.194				--	--	--

Notes:

1. Endpoint values (percent survival, biomass, and reproduction) are averages among five replicates run for each sample.
2. Biomass is average mg/individual at test initiation (dry weight of surviving amphipods/20).
3. Reproduction is average number of offspring per surviving adult amphipod.
4. * indicates that there was a statistally significant difference at the 95% confidence level between the water-side samples and the local conditions reference sample for the toxicity test endpoint.

Created by: AMR 12/4/2016
Checked by: SM 12/5/2016

Notes:

1. Endpoint values (percent survival, biomass, and reproduction) are averaged among five replicates run for each sample.
2. Biomass is average mg/individual at test initiation (dry weight of surviving amphipods/20)
3. Reproduction is average number of offspring per surviving adult amphipod.
4. * indicates that there was a statistically significant difference at the 95% confidence level between the Site sample and the artificial and natural laboratory controls.
5. Table has been modified from Table 4B in GZA's Supplement Phase II CSA (GZA, 2015).

Source: Table 4B from "Supplemental Phase II Comprehensive Site Assessment, Former Everett Staging Yard, Water-Side, Everett, Massachusetts, Release Tracking Number 3-13341", prepared by GZA, December 2015.

Checked by: AMR 12/5/2016

Notes:

[a] Both the median and maximum concentrations for Site samples are lower than those of the local conditions samples.

[b] Both the median and the maximum concentrations for Site samples are higher than those of the local conditions samples.

[c] The median concentration for the Site samples is below the median of the local conditions sample, and the maximum of the site sample is within 50% of the maximum of the local conditions samples.

[d] The median concentration for the Site samples is below the median of the local conditions sample, but the maximum of the site sample is more than 50% greater than the maximum local concentration sample.

[e] Local conditions comparison could not be performed due to sample size.

Created by: AMR 12/4/2016
Checked by: SM 12/52016

Notes:
[a] Only detected parameters are shown.
[b] 0-6 inch sediment interval
[c] Sources:
ER-M: NOAA Effects Range - Median concentrations (Long *et al.* , 1995)
WA AET - Washington State marine sediment apparent effects thresholds (AETs) (WAC 173-204, 2013)
NOAA Squirt - NOAA Screening Quick References Tables (Buchman, 2008)
[d] A maximum (max) detected concentration that is higher than the screening benchmark indicates a potentially significant expsoure.

-- Benchmark not available
EPH - Extractable petroleum hydrocarbons
PAHs - Polycyclic aromatic hydrocarbons
PCBs - Polychlorinated biphenyls
NOAA - National Oceanographic & Atmospheric Administration
mg/kg - milligrams per kilogram

Table 8
Comparison of Local Conditions Values to ER-Ms
Wynn Resort Casino
Everett, MA

Parameter	75th Percentile	90th Percentile [a]	ER-M [b]
Antimony	<5	5.8	9.3
Arsenic	19	29.2	70
Barium	140	170	48
Beryllium	0.9	1.03	--
Cadmium	4	5	9.6
Chromium	96	97	370
Lead	430	520	218
Mercury	0.979	1.045	0.71
Nickel	37.5	45	51.6
Selenium	<6.29	<6.5	1
Silver	2.1	2.5	3.7
Vanadium	65	71	57
Zinc	827	988	410
Total PAHs	224	418	45
Total PCBs	0.87	1.76	0.18
Bis(2-Ethylhexyl)phthalate	32.6	32.8	3.1
C11-C22	478	498	--
C19-C36	1000	1050	--
C9-C18	<157	<162	--

[a] For parameters with small data sets (Bis(2-Ethylhexyl)phthalate, C11-C22, C19-C36, and C-9-C18), the maximum value is presented.

[b] If ER-M is not avaialble, equivalent value is shown (seeTable 7 for source).

-- ER-M or other benchmark not available

< - Parameter indicated was not detected at the concentration shown.

Table 12
Dose Response Information for Detected Compounds with Potential Non-Carcinogenic Effects
Wynn Resort Casino
Everett Massachusetts

OIL OR HAZARDOUS MATERIAL	CAS	Chronic Oral Reference Dose (mg/kg/day)	MassDEP 2015 Default? (Yes/No)

Notes:

Preapared by: KALS 12/5/2016

Checked by: LCG 12/6/2016

CAS - Chemical Abstracts Service Number.

EPH - Extractable Petroleum Hydrocarbons.

PCBs - Polychlorinated Biphenyls.

MassDEP obtains dose-response values from several sources. Per 310 CMR 40.0993(5)(a), preference is given to dose-response values derived by the MassDEP. MassDEP default values have been used where available.

The notes provided by MassDEP are as follows:

1 - USEPA, Integrated Risk Information System (IRIS). Current as of December 2016.

1c - IRIS lists two oral RfDs for cadmium, one for food and one for water exposure. The more conservative is used.

1f - This value was withdrawn from IRIS. MassDEP continues to use it pending new toxicity information.

1x - IRIS value for Mercuric Chloride.

4 - Developed for the Risk Assessment ShortForm - Residential Scenario (MassDEP, 1992) by MassDEP staff. Documentation of this value may be found in Appendix D of that document (Lead).

5c - Final Updated Petroleum Hydrocarbon Fraction Toxicity Values for the VPH/EPH/APH Methodology. See: http://www.mass.gov/dep/cleanup/laws/tphtox03.doc

5d - Toxicity values for PAHs are consistent with the approach presented in "Updated Petroleum Hydrocarbon Fraction Toxicity Values for the VPH/EPH/APH Methodology" MassDEP 2003 and Characterizing Risks Posed by Petroleum Contaminated Sites MassDEP 2002.

6 - PPRTVs

For compounds not provided by MassDEP, toxicity values have been selected from the following sources using this hierarchy:

Tier 1: IRIS - Integrated Risk Information System (USEPA, 2016) (http://www.epa.gov/IRIS/).

Tier 2: PPRTV (X) - Preliminary Peer-Reviewed Toxicity Value or Appendix (X) from the National Center for Environmental Assessment (NCEA) (http://hhpprtv.ornl.gov/).

CAS - Chemical Abstracts Service Number.

EPH - Extractable Petroleum Hydrocarbons.

NA - Not Available

PCBs - Polychlorinated Biphenyls.

MassDEP obtains dose-response values from several sources. Per 310 CMR 40.0993(5)(a), preference is given to dose-response values derived by the MassDEP. MassDEP default values have been used where available.

The notes provided by MassDEP are as follows:

1 - USEPA, Integrated Risk Information System (IRIS). Current as of December 2016.

1e - The IRIS Oral Cancer Slope Factor for benzo(a)pyrene is the basis for the Oral Cancer Slope Factor applied to the seven PAH compounds which are designated as category A, B1, B2 or C carcinogens.

RAFs - Relative Absorption Factors

MassDEP obtains RAFs from several sources. Per 310 CMR 40.0993(5)(a), preference is given to RAFs derived by the MassDEP. MassDEP default values have been used where available.

The notes provided by MassDEP are as follows:

9 - MassDEP 2012 RAF Review. Unless specified otherwise, due to data limitations and consistent with the approach in Ontario Ministry of the Environment (2011 - for full reference see note 48e), a default RAF of 1 was chosen for all organic compounds for oral ingestion of contaminated soil and water.

9a - MassDEP 2012 RAF Review - Dermal RAFs for dioxins, furans, and PCBs consider data presented in: Brewster DW, Banks YB, Clark AM and Birbaum LS. (1998). Comparative Dermal Absorption of 2,3,7,8-Tetrachlorodibenzo-p-dioxin and Three Polychlorinated Dibenzofurans. Toxicol Appl Pharacol 97(1):156-166.
Mayes BA, Brown GL, Mondello FJ, Holtzclaw KW, Hamilton SB, Ramsey AA. (2002).Dermal Absorption in Rhesus Monkeys of Polychlorinated Biphenyls from Soil Contaminated With Aroclor 1260. Regul Toxicol Pharmacol 35(3):289-295.
Roy TA, Hammerstron AK and Schaum J. (2008). Percutaneous Absorption of 2,3,7,8-Tetrachlorodibenzo-p-dioxin (TCDD) from Soil. J. Toxicol Environ Health, Part A: Current Issues: 1509-1515.
Wester RC, Maibach HI, Sedik L, Melendres J, and Wade M. (1993). Percutaneous Absorption of PCBs from Soil: In-vivo Rhesus Monkey, In-vitro Human Skin, and Binding to Powered Human Stratum Corneum. J. Toxicol. Environ. Health 39:375-382.
Absorption of these compounds from soil with high to low organic content has been reported to range from less than 1% to over 10%. In light of the variability in the reported dermal absorption values and study characteristics, a default value of 0.1 was selected, which is toward the high end of the reported values.

9d - MassDEP 2012 RAF Review - Based on Magee B, Andersen P and Burmaster. (1996). Absorption Adjustment Factor (AAF) Distributions for Polycyclic Aromatic Hydrocarbons (PAHs). Human and Ecological Risk Assessment 2:841-873.

9e - MassDEP 2012 RAF Review - Based on Ontario Ministry of the Environment (2011). Rationale for the Development of Soil and Ground Water Standards for Use at Contaminated Sites in Ontario (April 15, 2011, Standards Development Branch, Ontario Ministry of the Environment (see Section 2.6, Development of Relative Absorption Factors, pp 61-67 and Table 2.35b Estimation of Dermal Relative Absorption Factors (RAFs) PP 120- 141)
http://www.ene.gov.on.ca/environment/en/resources/STDPROD_081485.html; Accessed March 22, 2012.

9f - MassDEP 2012 RAF Review - Based on USEPA (2004). Risk Assessment Guidance for Superfund Volume 1: Human Health Evaluation Manual Part E, Supplemental Guidance for Dermal Risk Assessment.

9x - Default values for chemical class selected from MassDEP, 1995. Guidance for Disposal Site Risk Characterization, Table B-11.

Notes:
ADD - Average Daily Dose (non-carcinogens).
LADD - Lifetime Average Daily Dose (carcinogens) - The equation is exactly the same as the ADD, however encompasses lifetime exposure assumptions.
HI - Hazard Index
HQ - Hazard Quotient
ELCR - Excess Lifetime Cancer Risk
CSF - Cancer Slope Factor
NA - Not available
NC - Not calculated
PCBs - Polychlorinated Biphenyls.
EPH - Extractable Petroleum Hydrocarbons.

Prepared By: KALS 12/6/2016
Checked By: LCG 12/6/2016

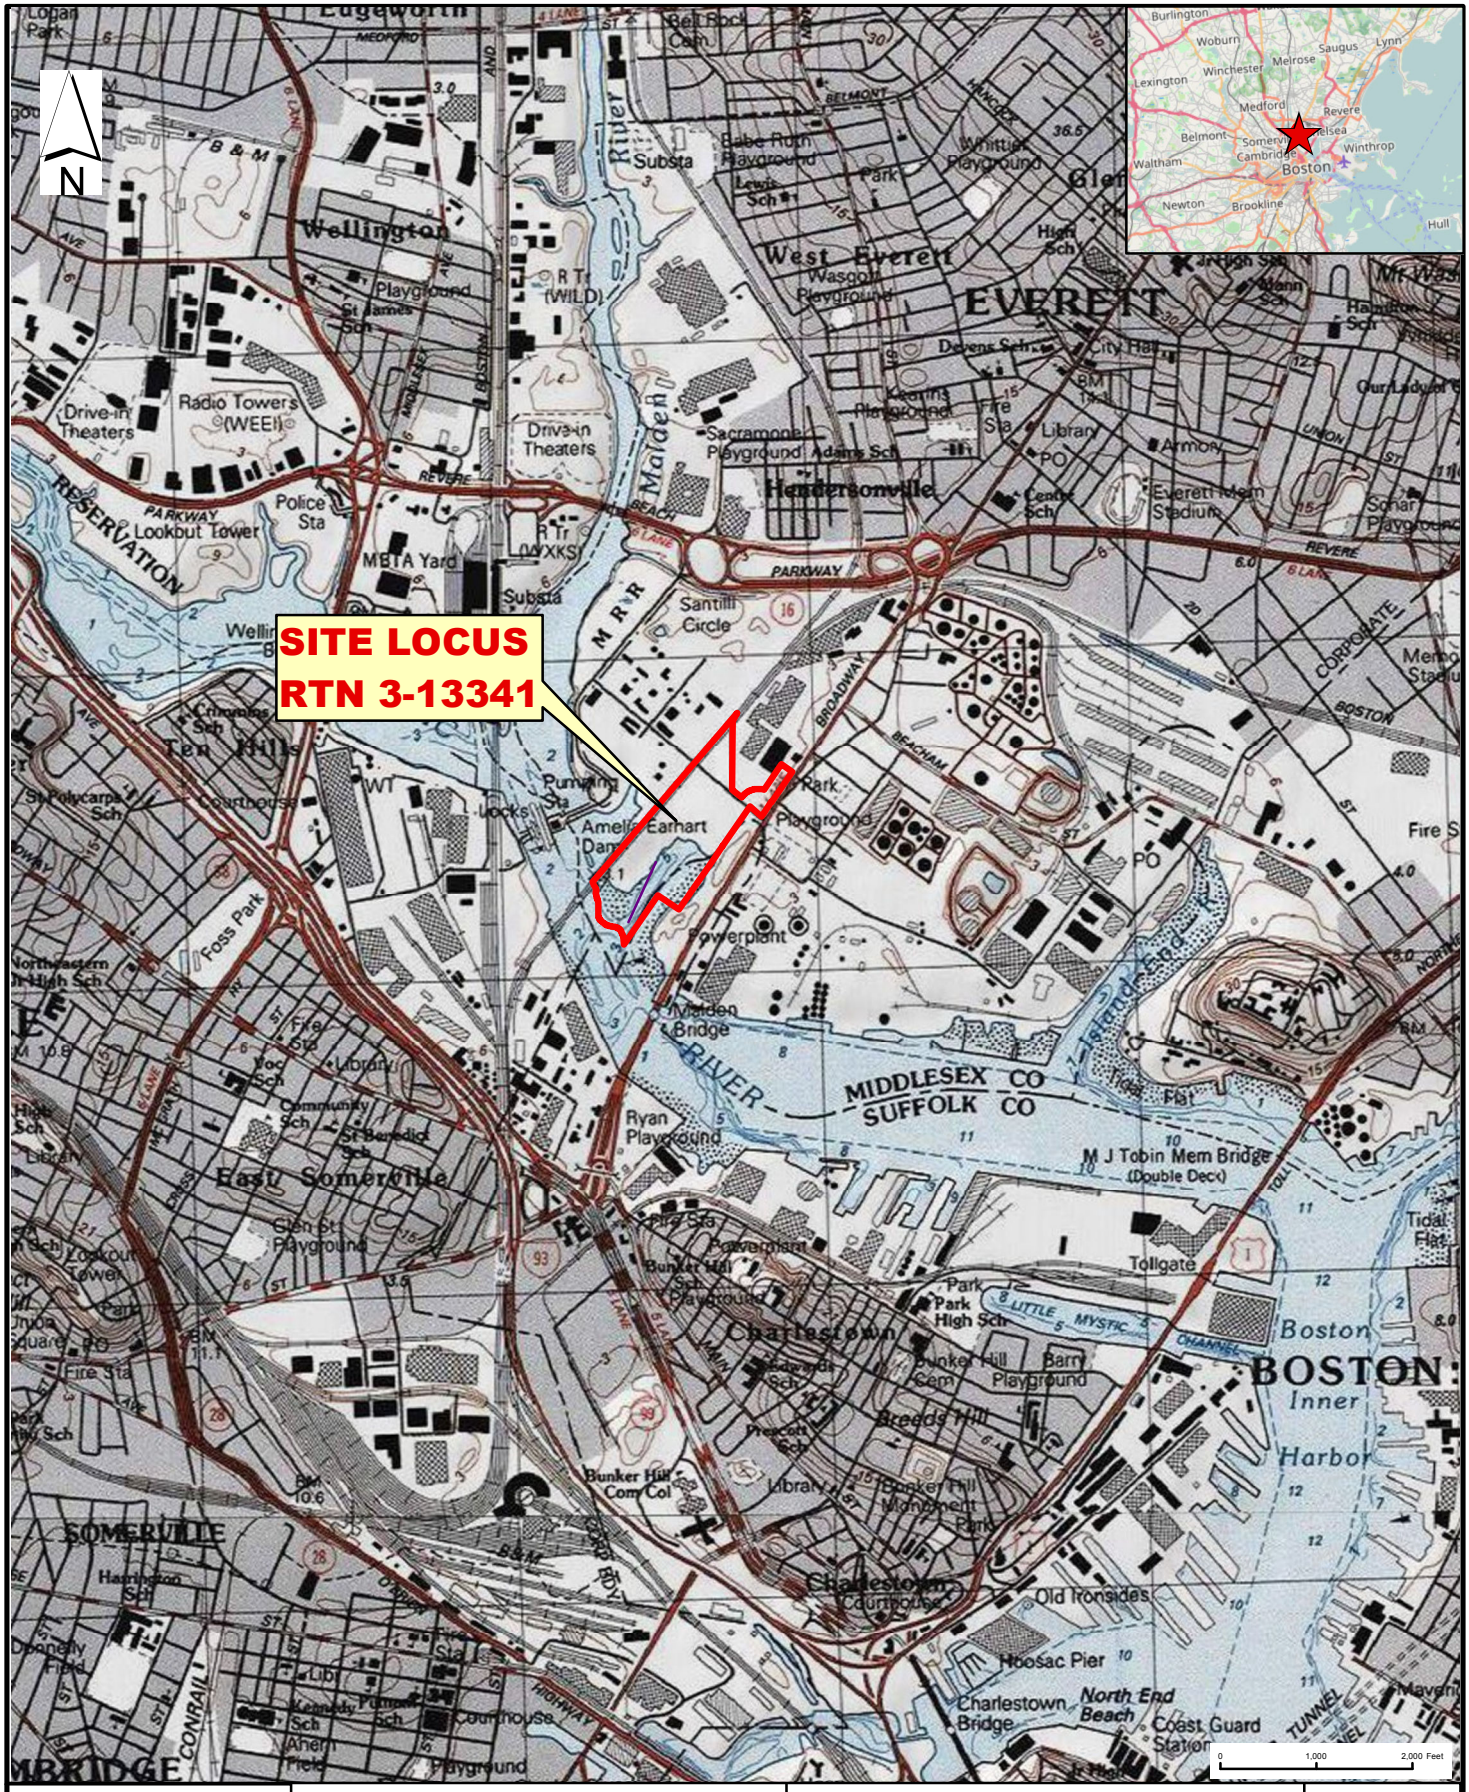

Table 16
Summary of Potential Carcinogenic Risk and Hazard Index
Wynn Resort Casino
Everett, Massachusetts

Receptor	Exposure Media/Route	HI	ELCR
Trespasser	Sediment - Dermal Contact	0.10	1.77E-06
	Sediment - Ingestion	0.26	3.40E-06
	Total:	**0.4**	**5E-06**

Notes:
HI - Hazard Index
ELCR - Excess Lifetime Cancer Risk

Prepared By: KALS 12/7/2016
Checked By: LCG 12/7/2016

RE: Wynn Everett - MCP (01.0171521.1)
ESS Laboratory Work Order Number: 1505527

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 4:36 pm, Jun 02, 2015

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

SAMPLE RECEIPT

The following samples were received on May 21, 2015 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	a. VPH, EPH, APH and TO-15 only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes ( ) No (X)*
	***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes (X) No ( )*

***All negative responses must be addressed in an attached laboratory narrative.**

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Notes and Definitions

Z-06	pH <= 2
U	Analyte included in the analysis, but not detected
S+	Surrogate recovery(ies) above upper control limit (S+).
Q	Calibration required quadratic regression (Q).
IC	Internal Standard(s) outside of criteria. Sample was reanalyzed to confirm (IC).
EL	Elevated Method Reporting Limits due to sample matrix (EL).
D	Diluted.
C+	Continuing Calibration recovery is above upper control limit (C+).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 15050527
Date Project Due: ~~5/28/15~~ 5/29/15 w 5/21/15
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present?	* No	10. Are the samples properly preserved:	Yes
Air No.:	w 5/21/15	11. Proper sample containers used?	Yes
2. Were Custody Seals Present? YES	No	12. Any air bubbles in the VOA vials?	N/A
3. Were Custody Seals Intact? YES	N/A	13. Holding times exceeded?	No
4. Is Radiation count < 100 CPM?	Yes	14. Sufficient sample volumes?	Yes
5. Is a cooler present?	Yes	15. Any Subcontracting needed?	No
Cooler Temp: **3.5**		16. Are ESS labels on correct containers?	**Yes|No**
Iced With: **Ice**		17. Were samples received intact?	**Yes|No**
6. Was COC included with samples?	Yes	ESS Sample IDs:	
7. Was COC signed and dated by client?	Yes	Sub Lab:	
8. Does the COC match the sample	Yes	Analysis:	
9. Is COC complete and correct?	Yes	TAT:	

18. Was there need to call project manager to discuss status? If yes, please explain.

CERTIFICATE OF ANALYSIS

David E Leone
GZA GeoEnvironmental, Inc.
249 Vanderbilt Avenue
Norwood, MA 02062

RE: Wynn Everett - MCP (01.0171521.13)
ESS Laboratory Work Order Number: 1505568

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 5:06 pm, Jun 04, 2015

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: Wynn Everett - MCP

ESS Laboratory Work Order: 1505568

SAMPLE RECEIPT

The following samples were received on May 22, 2015 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

Revision 1, June 5, 2015: This report has been revised to include a corrected certification form for Question G.

Lab Number	Sample Name	Matrix	Analysis
1505568-01	SW-10-05-22-15	Surface Water	6010C, 7010, 7196A, 7470A, 8270C, 8270D SIM, EPH8270, MADEP-EPH
1505568-02	SW-11-05-22-15	Surface Water	6010C, 7010, 7196A, 7470A, 8270C, 8270D SIM, EPH8270, MADEP-EPH

CERTIFICATE OF ANALYSIS

Client Project ID: Wynn Everett - MCP ESS Laboratory Work Order: 1505568

PROJECT NARRATIVE

8270C Semi-Volatile Organic Compounds

1505568-01 **Internal Standard(s) outside of criteria. Sample was reanalyzed to confirm (IC).**
Chrysene-d12 (49% @ 50-200%), Perylene-d12 (47% @ 50-200%)

CYE0365-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (96% @ 70-130%)

CYE0365-CCV1 **Continuing Calibration recovery is above upper control limit (C+).**
N-Nitrosodimethylamine (131% @ 70-130%)

CYE0367-CCV1 **Continuing Calibration recovery is above upper control limit (C+).**
2-Chloronaphthalene (155% @ 70-130%), bis(2-Chloroethyl)ether (133% @ 70-130%), N-Nitrosodimethylamine (139% @ 70-130%)

8270D(SIM) Semi-Volatile Organic Compounds

CE52636-BLK1 **Surrogate recovery(ies) above upper control limit (S+).**
2,4,6-Tribromophenol (120% @ 15-110%)

CYE0340-CCV1 **Continuing Calibration recovery is above upper control limit (C+).**
2,4,6-Tribromophenol (152% @ 70-130%)

Dissolved Metals

1505568-01 **Elevated Method Reporting Limits due to sample matrix (EL).**
Lead , Thallium

1505568-02 **Elevated Method Reporting Limits due to sample matrix (EL).**
Lead , Thallium

No other observations noted.

End of Project Narrative.

CURRENT SW-846 METHODOLOGY VERSIONS

Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015D - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH / VPH

Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035 - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **1505568-01 through 1505568-02**

Matrices: (X) Ground Water/Surface Water ( ) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

CAM Protocol (check all that apply below):

( ) 8260 VOC CAM II A	(X) 7470/7471 Hg CAM III B	( ) MassDEP VPH CAM IV A	( ) 8081 Pesticides CAM V B	(X) 7196 Hex Cr CAM VI B	( ) MassDEP APH CAM IX A
(X) 8270 SVOC CAM II B	(X) 7010 Metals CAM III C	(X) MassDEP EPH CAM IV B	( ) 8151 Herbicides CAM V C	( ) 8330 Explosives CAM VIII A	( ) TO-15 VOC CAM IX B
(X) 6010 Metals CAM III A	( ) 6020 Metals CAM III D	( ) 8082 PCB CAM V A	( ) 6860 Perchlorate CAM VIII B	( ) 9014 Total Cyanide/PAC CAM VI A	

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	a. VPH, EPH, APH and TO-15 only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes ( ) No (X)*
	***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes (X) No ( )*

***All negative responses must be addressed in an attached laboratory narrative.**

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Notes and Definitions

Z-06	pH <= 2
U	Analyte included in the analysis, but not detected
S+	Surrogate recovery(ies) above upper control limit (S+).
Q	Calibration required quadratic regression (Q).
IC	Internal Standard(s) outside of criteria. Sample was reanalyzed to confirm (IC).
EL	Elevated Method Reporting Limits due to sample matrix (EL).
D	Diluted.
C+	Continuing Calibration recovery is above upper control limit (C+).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 15050568
Date Project Due: ~~5/29/15~~ 6/1/15 w- 5/22/15
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present?	* No	10. Are the samples properly preserved?	Yes
Air No.:		11. Proper sample containers used?	Yes
2. Were Custody Seals Present?	Yes	12. Any air bubbles in the VOA vials?	N/A
3. Were Custody Seals Intact?	Yes	13. Holding times exceeded?	No
4. Is Radiation count < 100 CPM?	Yes	14. Sufficient sample volumes?	Yes
5. Is a cooler present?	Yes	15. Any Subcontracting needed?	No
Cooler Temp: **3.4**		16. Are ESS labels on correct containers?	**Yes|No**
Iced With: **Ice**		17. Were samples received intact?	**Yes|No**
6. Was COC included with samples?	Yes	ESS Sample IDs:	
7. Was COC signed and dated by client?	Yes	Sub Lab:	
8. Does the COC match the sample	Yes	Analysis:	
9. Is COC complete and correct?	Yes	TAT:	

18. Was there need to call project manager to discuss status? If yes, please explain.

30													

REMARKS

See Log Key for explanation of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

See Log Key for explanation of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

30													

REMARKS

See Log Key for explanation of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

30													

REMARKS

See Log Key for explanation of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

25													
30													

REMARKS

See Log Key for explanation of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

See Log Key for explanation of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

SEDIMENT LABORATORY REPORTS

CERTIFICATE OF ANALYSIS

David E Leone
GZA GeoEnvironmental, Inc.
249 Vanderbilt Avenue
Norwood, MA 02062

RE: Everett (01.0171521.02)
ESS Laboratory Work Order Number: 1308098

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 3:56 pm, Aug 21, 2013

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibratins, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Subcontracted Analyses

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: Everett

ESS Laboratory Work Order: 1308098

SAMPLE RECEIPT

The following samples were received on August 07, 2013 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Question I: All samples for SVOA were analyzed for a subset of the required MCP list per the client's request.

Benzidine , Hexachlorocyclopentadiene

8270D(SIM) Polynuclear Aromatic Hydrocarbons

1308098-07 **Internal Standard(s) outside of criteria due to matrix (UCM/coelution is present) (IM).**
Perylene-d12 (37% @ 50-200%)

MADEP-EPH Extractable Petroleum Hydrocarbons

CWH0135-CCV4 **Continuing Calibration recovery is above upper control limit (C+).**
Benzo(a)pyrene (121% @ 80-120%)

Total Metals Solid

CH30729-BSD1 **Blank Spike recovery is below lower control limit (B-).**
Arsenic (77% @ 80-120%), Barium (79% @ 80-120%), Cadmium (77% @ 80-120%), Zinc (76% @ 80-120%)

No other observations noted.

End of Project Narrative.

MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **1308098-01 through 1308098-20**

Matrices: ( ) Ground Water/Surface Water (X) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

CAM Protocol (check all that apply below):

( ) 8260 VOC CAM II A	(X) 7470/7471 Hg CAM III B	( ) MassDEP VPH CAM IV A	( ) 8081 Pesticides CAM V B	( ) 7196 Hex Cr CAM VI B	( ) MassDEP APH CAM IX A
(X) 8270 SVOC CAM II B	( ) 7010 Metals CAM III C	(X) MassDEP EPH CAM IV B	( ) 8151 Herbicides CAM V C	( ) 8330 Explosives CAM VIII A	( ) TO-15 VOC CAM IX B
(X) 6010 Metals CAM III A	(X) 6020 Metals CAM III D	(X) 8082 PCB CAM V A	( ) 6860 Perchlorate CAM VIII B	( ) 9014 Total Cyanide/PAC CAM VI A	

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	a. VPH, EPH, APH and TO-15 only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes (X) No ( )*

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Client Project ID: Everett

ESS Laboratory Work Order: 1308098

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
P	Percent difference between primary and confirmation results exceeds 40% (P).
IM	Internal Standard(s) outside of criteria due to matrix (UCM/coelution is present) (IM).
ICV	Initial Calibration Verification recovery is outside of control limit (ICV).
D	Diluted.
C+	Continuing Calibration recovery is above upper control limit (C+).
C-	Continuing Calibration recovery is below lower control limit (C-).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 13080098
Date Project Due: 8/14/13
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present?	* No	10. Are the samples properly preserved?	Yes
Air No.:		11. Proper sample containers used?	Yes
2. Were Custody Seals Present?	No	12. Any air bubbles in the VOA vials?	N/A
3. Were Custody Seals Intact?	N/A	13. Holding times exceeded?	No
4. Is Radiation count < 100 CPM?	Yes	14. Sufficient sample volumes?	Yes
5. Is a cooler present?	Yes	15. Any Subcontracting needed?	~~No~~ Yes
Cooler Temp: **4.8**		16. Are ESS labels on correct containers?	Yes|No
Iced With: **Ice**		17. Were samples received intact?	Yes|No
6. Was COC included with samples?	Yes	ESS Sample IDs:	1,7,9,10,13,14,19,17-
7. Was COC signed and dated by client?	Yes	Sub Lab:	Stl, ~~Test America~~
8. Does the COC match the sample	Yes	Analysis:	TOC
9. Is COC complete and correct?	Yes	TAT:	5td.

18. Was there need to call project manager to discuss status? If yes, please explain.

CERTIFICATE OF ANALYSIS

David E Leone
GZA GeoEnvironmental, Inc.
249 Vanderbilt Avenue
Norwood, MA 02062

RE: Everett (01.0171521.02)
ESS Laboratory Work Order Number: 1308104

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 4:20 pm, Aug 19, 2013

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibratins, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Client Project ID: Everett

ESS Laboratory Work Order: 1308104

SAMPLE RECEIPT

The following samples were received on August 07, 2013 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Question I: All samples for SVOA were analyzed for a subset of the required MCP list per the client's request.

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	a. VPH, EPH, APH and TO-15 only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

ESS Laboratory Work Order: 1308104

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
ICV	Initial Calibration Verification recovery is outside of control limit (ICV).
D	Diluted.
C+	Continuing Calibration recovery is above upper control limit (C+).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report

Sample Description
Analysis of Solid Samples

Samples Analyzed

Enclosed are Report No(s): 39711 to 39720

ICV 50,000 = 49,999mg/kg
CCV 50,000 = 48,137mg/kg

Sample # 39720 = 31,280mg/kg

39720 MS+50,000 = 74,810mg/kg 87.0% Rec
39720 MSD = 75860mg/kg 89.2% Rec

Thank you for your business

CERTIFICATE OF ANALYSIS

David E Leone
GZA GeoEnvironmental, Inc.
249 Vanderbilt Avenue
Norwood, MA 02062

RE: Everett (01.0171521.02)
ESS Laboratory Work Order Number: 1308105

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 4:13 pm, Aug 19, 2013

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibratins, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: Everett

ESS Laboratory Work Order: 1308105

SAMPLE RECEIPT

The following samples were received on August 07, 2013 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Question I: All samples for SVOA were analyzed for a subset of the required MCP list per the client's request.

PROJECT NARRATIVE

8082A Polychlorinated Biphenyls (PCB)

1308105-01 **Surrogate recovery(ies) below lower control limit (S-).**
Tetrachloro-m-xylene [2C] (24% @ 30-150%)

1308105-02 **Surrogate recovery(ies) diluted below the MRL (SD).**
Decachlorobiphenyl (% @ 30-150%), Decachlorobiphenyl [2C] (% @ 30-150%), Tetrachloro-m-xylene (% @ 30-150%), Tetrachloro-m-xylene [2C] (% @ 30-150%)

1308105-18 **Surrogate recovery(ies) below lower control limit (S-).**
Tetrachloro-m-xylene [2C] (21% @ 30-150%)

8270D Semi-Volatile Organic Compounds

1308105-01 **Surrogate recovery(ies) below lower control limit (S-).**
2,4,6-Tribromophenol (14% @ 30-130%)

1308105-07 **Surrogate recovery(ies) below lower control limit (S-).**
2,4,6-Tribromophenol (28% @ 30-130%)

1308105-08 **Surrogate recovery(ies) outside of criteria due to matrix (UCM/coelution/matrix is present) (SM).**
1,2-Dichlorobenzene-d4 (27% @ 30-130%), 2,4,6-Tribromophenol (25% @ 30-130%), 2-Fluorophenol (27% @ 30-130%)

1308105-09 **Surrogate recovery(ies) below lower control limit (S-).**
2,4,6-Tribromophenol (% @ 30-130%)

1308105-11 **Surrogate recovery(ies) below lower control limit (S-).**
2,4,6-Tribromophenol (7% @ 30-130%)

1308105-18 **Surrogate recovery(ies) below lower control limit (S-).**
2,4,6-Tribromophenol (29% @ 30-130%)

CWH0106-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (110% @ 80-120%), 4,6-Dinitro-2-Methylphenol (114% @ 70-130%), Benzoic Acid (103% @ 70-130%), Pentachlorophenol (103% @ 80-120%)

CWH0106-CCV1 **Initial Calibration Verification recovery is outside of control limit (ICV).**
Benzidine , Hexachlorocyclopentadiene

8270D(SIM) Polynuclear Aromatic Hydrocarbons

1308105-08 **Surrogate recovery(ies) outside of criteria due to matrix (UCM/coelution/matrix is present) (SM).**
1,2-Dichlorobenzene-d4 (26% @ 30-130%), Nitrobenzene-d5 (26% @ 30-130%)

1308105-18 **Surrogate recovery(ies) below lower control limit (S-).**
Nitrobenzene-d5 (26% @ 30-130%)

MADEP-EPH Extractable Petroleum Hydrocarbons

CWH0135-CCV4 **Continuing Calibration recovery is above upper control limit (C+).**
Benzo(a)pyrene (121% @ 80-120%)

Total Metals Solid

1308105-09 **Elevated Method Reporting Limits due to sample matrix (EL).**
Antimony , Selenium , Thallium

MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **1308105-01 through 1308105-20**

Matrices: ( ) Ground Water/Surface Water (X) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

CAM Protocol (check all that apply below):

( ) 8260 VOC CAM II A	(X) 7470/7471 Hg CAM III B	( ) MassDEP VPH CAM IV A	( ) 8081 Pesticides CAM V B	( ) 7196 Hex Cr CAM VI B	( ) MassDEP APH CAM IX A
(X) 8270 SVOC CAM II B	( ) 7010 Metals CAM III C	(X) MassDEP EPH CAM IV B	( ) 8151 Herbicides CAM V C	( ) 8330 Explosives CAM VIII A	( ) TO-15 VOC CAM IX B
(X) 6010 Metals CAM III A	(X) 6020 Metals CAM III D	(X) 8082 PCB CAM V A	( ) 6860 Perchlorate CAM VIII B	( ) 9014 Total Cyanide/PAC CAM VI A	

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	a. VPH, EPH, APH and TO-15 only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: Everett

ESS Laboratory Work Order: 1308105

Notes and Definitions

U	Analyte included in the analysis, but not detected
SM	Surrogate recovery(ies) outside of criteria due to matrix (UCM/coelution/matrix is present) (SM).
SD	Surrogate recovery(ies) diluted below the MRL (SD).
S-	Surrogate recovery(ies) below lower control limit (S-).
Q	Calibration required quadratic regression (Q).
ICV	Initial Calibration Verification recovery is outside of control limit (ICV).
EL	Elevated Method Reporting Limits due to sample matrix (EL).
D	Diluted.
C+	Continuing Calibration recovery is above upper control limit (C+).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 13080105
Date Project Due: 8/14/13
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present? *** No**
   Air No.:
2. Were Custody Seals Present? **No**
3. Were Custody Seals Intact? **N/A**
4. Is Radiation count < 100 CPM? **Yes**
5. Is a cooler present? **Yes**
   Cooler Temp: **4.1**
   Iced With: **Ice**
6. Was COC included with samples? **Yes**
7. Was COC signed and dated by client? **Yes**
8. Does the COC match the sample **Yes**
9. Is COC complete and correct? **Yes**
10. Are the samples properly preserved? **Yes**
11. Proper sample containers used? **Yes**
12. Any air bubbles in the VOA vials? **N/A**
13. Holding times exceeded? **No**
14. Sufficient sample volumes? **Yes**
15. Any Subcontracting needed? **No**
16. Are ESS labels on correct containers? **Yes | No**
17. Were samples received intact? **Yes | No**
ESS Sample IDs: 1308105-1, 2, 4, 7, 8, 9, 11, 13, 16, 18, 19, 20
Sub Lab: ~~Sterling~~ TA
Analysis: TOC
TAT: 4 day

18. Was there need to call project manager to discuss status? If yes, please explain.

CERTIFICATE OF ANALYSIS

David E Leone
GZA GeoEnvironmental, Inc.
249 Vanderbilt Avenue
Norwood, MA 02062

RE: Everett (01.0171521.02)
ESS Laboratory Work Order Number: 1308106

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 4:36 pm, Aug 19, 2013

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibratins, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Client Project ID: Everett

ESS Laboratory Work Order: 1308106

SAMPLE RECEIPT

The following samples were received on August 07, 2013 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Question I: All samples for SVOA were analyzed for a subset of the required MCP list per the client's request.

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	a. VPH, EPH, APH and TO-15 only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
ICV	Initial Calibration Verification recovery is outside of control limit (ICV).
D	Diluted.
C+	Continuing Calibration recovery is above upper control limit (C+).
C-	Continuing Calibration recovery is below lower control limit (C-).
BT	Benzidine tailing factor >2.
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report

CERTIFICATE OF ANALYSIS

David E Leone
GZA GeoEnvironmental, Inc.
249 Vanderbilt Avenue
Norwood, MA 02062

RE: Everett (01.0171521.02)
ESS Laboratory Work Order Number: 1308107

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 11:23 am, Aug 20, 2013

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibratins, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Subcontracted Analyses

TestAmerica Laboratories, Inc. - Burlington, VT	Total Organic Carbon

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: Everett

ESS Laboratory Work Order: 1308107

SAMPLE RECEIPT

The following samples were received on August 07, 2013 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Lab Number	SampleName	Matrix	Analysis

CURRENT SW-846 METHODOLOGY VERSIONS

Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH / VPH

Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5035 - Solid Purge and Trap

MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **1308107-01 through 1308107-20**

Matrices: ( ) Ground Water/Surface Water (X) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

CAM Protocol (check all that apply below):

( ) 8260 VOC CAM II A	(X) 7470/7471 Hg CAM III B	( ) MassDEP VPH CAM IV A	( ) 8081 Pesticides CAM V B	( ) 7196 Hex Cr CAM VI B	( ) MassDEP APH CAM IX A
( ) 8270 SVOC CAM II B	( ) 7010 Metals CAM III C	( ) MassDEP EPH CAM IV B	( ) 8151 Herbicides CAM V C	( ) 8330 Explosives CAM VIII A	( ) TO-15 VOC CAM IX B
(X) 6010 Metals CAM III A	(X) 6020 Metals CAM III D	( ) 8082 PCB CAM V A	( ) 6860 Perchlorate CAM VIII B	( ) 9014 Total Cyanide/PAC CAM VI A	

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	a. VPH, EPH, APH and TO-15 only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes ( ) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes (X) No ( )*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes (X) No ( )*

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Notes and Definitions

U	Analyte included in the analysis, but not detected
D	Diluted.
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 200-17862-1

Laboratory: TestAmerica Burlington

Narrative

CASE NARRATIVE

Client: ESS Laboratory

Project: Soil Analysis

Report Number: 200-17862-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 08/09/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.4 C.

TOTAL ORGANIC CARBON

Samples 1308107-4, 1308107-7, 1308107-9, 1308107-10, 1308107-12, 1308107-13, 1308107-16 and 1308107-18 were analyzed for total organic carbon in accordance with Lloyd Kahn Method. The samples were analyzed on 08/14/2013.

No difficulties were encountered during the TOC analysis.

All quality control parameters were within the acceptance limits.

After printing this label:
1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.
Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com.FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery,misdelivery,or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim.Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental,consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss.Maximum for items of extraordinary value is $1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	Lab does not accept radioactive samples.
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.4ºC IR GUN ID 181/CF=-0.2
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	Refer to Job Narrative for details.
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Received extra samples not listed on COC.
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	False	Refer to Job Narrative for details.
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A	

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 13080107
Date Project Due: 8/14/13
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present? *** No**
   Air No.:
2. Were Custody Seals Present? **No**
3. Were Custody Seals Intact? **N/A**
4. Is Radiation count < 100 CPM? **Yes**
5. Is a cooler present? **Yes**
   Cooler Temp: **4.8**
   Iced With: **Ice**
6. Was COC included with samples? **Yes**
7. Was COC signed and dated by client? **Yes**
8. Does the COC match the sample **Yes**
9. Is COC complete and correct? **Yes**
10. Are the samples properly preserved? **Yes**
11. Proper sample containers used? **Yes**
12. Any air bubbles in the VOA vials? **N/A**
13. Holding times exceeded? **No**
14. Sufficient sample volumes? **Yes**
15. Any Subcontracting needed? **No** Yes CW 8/7/13
16. Are ESS labels on correct containers? **Yes|No**
17. Were samples received intact? **Yes|No**
18. ESS Sample IDs: 1308107 4, 6, 9, 10, 12, 13, 16, & 18
    Sub Lab: TA
    Analysis: TOC
    TAT: 4day

18. Was there need to call project manager to discuss status? If yes, please explain.

RE: Everett (01.0171521.02)
ESS Laboratory Work Order Number: 1308108

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 12:27 pm, Aug 20, 2013

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibratins, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

SAMPLE RECEIPT

The following samples were received on August 07, 2013 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Question I: All samples for SVOA were analyzed for a subset of the required MCP list per the client's request.

PROJECT NARRATIVE

8082A Polychlorinated Biphenyls (PCB)

1308108-02 **Surrogate recovery(ies) diluted below the MRL (SD).**
Decachlorobiphenyl (% @ 30-150%), Decachlorobiphenyl [2C] (% @ 30-150%), Tetrachloro-m-xylene (% @ 30-150%), Tetrachloro-m-xylene [2C] (% @ 30-150%)

1308108-13 **Surrogate recovery(ies) below lower control limit (S-).**
Tetrachloro-m-xylene (20% @ 30-150%), Tetrachloro-m-xylene [2C] (15% @ 30-150%)

8270D Semi-Volatile Organic Compounds

CWH0106-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (110% @ 80-120%), 4,6-Dinitro-2-Methylphenol (114% @ 70-130%), Benzoic Acid (103% @ 70-130%), Pentachlorophenol (103% @ 80-120%)

CWH0106-CCV1 **Initial Calibration Verification recovery is outside of control limit (ICV).**
Benzidine , Hexachlorocyclopentadiene

CWH0118-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (85% @ 80-120%), 4,6-Dinitro-2-Methylphenol (100% @ 70-130%), Benzoic Acid (45% @ 70-130%), Pentachlorophenol (76% @ 80-120%)

CWH0118-CCV1 **Continuing Calibration recovery is below lower control limit (C-).**
Benzoic Acid (45% @ 70-130%), Pentachlorophenol (76% @ 80-120%)

CWH0118-CCV1 **Initial Calibration Verification recovery is outside of control limit (ICV).**
Benzidine , Hexachlorocyclopentadiene

CWH0124-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (109% @ 80-120%), Benzoic Acid (106% @ 70-130%)

CWH0124-CCV1 **Continuing Calibration recovery is above upper control limit (C+).**
3+4-Methylphenol (121% @ 80-120%), 4-Chloroaniline (126% @ 80-120%)

CWH0124-CCV1 **Continuing Calibration recovery is below lower control limit (C-).**
Acenaphthene (77% @ 80-120%)

CWH0124-CCV1 **Initial Calibration Verification recovery is below lower control limit (ICV-).**
2,4-Dinitrophenol

CWH0124-CCV1 **Initial Calibration Verification recovery is outside of control limit (ICV).**
1,1-Biphenyl

CWH0140-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (110% @ 80-120%), 4,6-Dinitro-2-Methylphenol (108% @ 70-130%), Benzoic Acid (66% @ 70-130%), Pentachlorophenol (73% @ 80-120%)

CWH0140-CCV1 **Continuing Calibration recovery is below lower control limit (C-).**
Benzoic Acid (66% @ 70-130%), N-Nitrosodimethylamine (71% @ 80-120%), Pentachlorophenol (73% @ 80-120%)

CWH0140-CCV1 **Initial Calibration Verification recovery is outside of control limit (ICV).**
Benzidine , Hexachlorocyclopentadiene

CWH0140-TUN1 **Pentachlorophenol tailing factor > 2.**

8270D(SIM) Polynuclear Aromatic Hydrocarbons

1308108-02 **Internal Standard(s) outside of criteria due to matrix (UCM/coelution is present) (IM).**

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	a. VPH, EPH, APH and TO-15 only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Notes and Definitions

U	Analyte included in the analysis, but not detected
SM	Surrogate recovery(ies) outside of criteria due to matrix (UCM/coelution/matrix is present) (SM).
SD	Surrogate recovery(ies) diluted below the MRL (SD).
S-	Surrogate recovery(ies) below lower control limit (S-).
Q	Calibration required quadratic regression (Q).
PT	Pentachlorophenol tailing factor > 2.
IM	Internal Standard(s) outside of criteria due to matrix (UCM/coelution is present) (IM).
ICV-	Initial Calibration Verification recovery is below lower control limit (ICV-).
ICV	Initial Calibration Verification recovery is outside of control limit (ICV).
D	Diluted.
C+	Continuing Calibration recovery is above upper control limit (C+).
C-	Continuing Calibration recovery is below lower control limit (C-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 200-17862-2

Laboratory: TestAmerica Burlington

Narrative

CASE NARRATIVE

Client: ESS Laboratory

Project: Soil Analysis

Report Number: 200-17862-2

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 08/09/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.4 C.

TOTAL ORGANIC CARBON

Samples 1308108-1, 1308108-2, 1308108-4, 1308108-5, 1308108-9, 1308108-12, 1308108-13, 1308108-14, 1308108-16 and 1308108-18 were analyzed for total organic carbon in accordance with Lloyd Kahn Method. The samples were analyzed on 08/14/2013.

No difficulties were encountered during the TOC analysis.

All quality control parameters were within the acceptance limits.

PERCENT SOLIDS

Samples 1308108-1, 1308108-2, 1308108-4, 1308108-5, 1308108-9, 1308108-12, 1308108-13, 1308108-14, 1308108-16 and 1308108-18 were analyzed for percent solids in accordance with EPA SW846 3550C. The samples were analyzed on 08/12/2013.

No difficulties were encountered during the % solids analysis.

All quality control parameters were within the acceptance limits.

After printing this label:
1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.
Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com.FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery,misdelivery,or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim.Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental,consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss.Maximum for items of extraordinary value is $1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	Lab does not accept radioactive samples.
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.4ºC IR GUN ID 181/CF=-0.2
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	Refer to Job Narrative for details.
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Received extra samples not listed on COC.
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	False	Refer to Job Narrative for details.
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A	

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 13080108
Date Project Due: 8/14/13
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present?	* No	10. Are the samples properly preserved?	Yes
Air No.:		11. Proper sample containers used?	Yes
2. Were Custody Seals Present?	No	12. Any air bubbles in the VOA vials?	N/A
3. Were Custody Seals Intact?	N/A	13. Holding times exceeded?	No
4. Is Radiation count < 100 CPM?	Yes	14. Sufficient sample volumes?	Yes
5. Is a cooler present?	Yes	15. Any Subcontracting needed?	* Yes
Cooler Temp: **2.6**		16. Are ESS labels on correct containers?	Yes|No
Iced With: **Ice**		17. Were samples received intact?	Yes|No
6. Was COC included with samples?	Yes	ESS Sample IDs:	108-1,2,4,5,9,12,13,14,16,18
7. Was COC signed and dated by client?	Yes	Sub Lab:	Stat (TA)
8. Does the COC match the sample	Yes	Analysis:	TOC
9. Is COC complete and correct?	Yes	TAT:	4 Dy

18. Was there need to call project manager to discuss status? If yes, please explain.

CERTIFICATE OF ANALYSIS

David E Leone
GZA GeoEnvironmental, Inc.
249 Vanderbilt Avenue
Norwood, MA 02062

RE: Everett (01.0171521.02)
ESS Laboratory Work Order Number: 1308109

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 1:05 pm, Aug 20, 2013

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibratins, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

ESS Laboratory Work Order: 1308109

SAMPLE RECEIPT

The following samples were received on August 07, 2013 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Question I: All samples for SVOA were analyzed for a subset of the required MCP list per the client's request.

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: Everett

ESS Laboratory Work Order: 1308109

MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **1308109-01 through 1308109-20**

Matrices: ( ) Ground Water/Surface Water (X) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

CAM Protocol (check all that apply below):

( ) 8260 VOC CAM II A	(X) 7470/7471 Hg CAM III B	( ) MassDEP VPH CAM IV A	( ) 8081 Pesticides CAM V B	( ) 7196 Hex Cr CAM VI B	( ) MassDEP APH CAM IX A
(X) 8270 SVOC CAM II B	( ) 7010 Metals CAM III C	(X) MassDEP EPH CAM IV B	( ) 8151 Herbicides CAM V C	( ) 8330 Explosives CAM VIII A	( ) TO-15 VOC CAM IX B
(X) 6010 Metals CAM III A	(X) 6020 Metals CAM III D	(X) 8082 PCB CAM V A	( ) 6860 Perchlorate CAM VIII B	( ) 9014 Total Cyanide/PAC CAM VI A	

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	a. VPH, EPH, APH and TO-15 only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

****All negative responses must be addressed in an attached laboratory narrative.***

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

ESS Laboratory Work Order: 1308109

Notes and Definitions

IM	Internal Standard(s) outside of criteria due to matrix (UCM/coelution is present) (IM).
C-	Continuing Calibration recovery is below lower control limit (C-).
C+	Continuing Calibration recovery is above upper control limit (C+).
D	Diluted.
D+	Relative percent difference for duplicate is outside of criteria (D+).
EL	Elevated Method Reporting Limits due to sample matrix (EL).
B+	Blank Spike recovery is above upper control limit (B+).
ICV-	Initial Calibration Verification recovery is below lower control limit (ICV-).
U	Analyte included in the analysis, but not detected
P	Percent difference between primary and confirmation results exceeds 40% (P).
PT	Pentachlorophenol tailing factor > 2.
Q	Calibration required quadratic regression (Q).
S+	Surrogate recovery(ies) above upper control limit (S+).
SD	Surrogate recovery(ies) diluted below the MRL (SD).
SM	Surrogate recovery(ies) outside of criteria due to matrix (UCM/coelution/matrix is present) (SM).
ICV	Initial Calibration Verification recovery is outside of control limit (ICV).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 200-17862-3

Laboratory: TestAmerica Burlington

Narrative

CASE NARRATIVE

Client: ESS Laboratory

Project: Soil Analysis

Report Number: 200-17862-3

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 08/09/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.4 C.

TOTAL ORGANIC CARBON

Samples 1308109-1, 1308109-3, 1308109-6, 1308109-7, 1308109-9, 1308109-11, 1308109-12, 1308109-14, 1308109-18 and 1308109-20 were analyzed for total organic carbon in accordance with Lloyd Kahn Method. The samples were analyzed on 08/14/2013.

TOC Result 2 was detected in method blank MB 200-59843/31 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No other difficulties were encountered during the TOC analysis.

All other quality control parameters were within the acceptance limits.

After printing this label:
1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.
Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com.FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery,misdelivery,or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim.Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental,consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss.Maximum for items of extraordinary value is $1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	Lab does not accept radioactive samples.
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.4ºC IR GUN ID 181/CF=-0.2
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	Refer to Job Narrative for details.
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Received extra samples not listed on COC.
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	False	Refer to Job Narrative for details.
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A	

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 13080109
Date Project Due: 8/14/13
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present?	* No	10. Are the samples properly preserved?	Yes
Air No.:		11. Proper sample containers used?	Yes
2. Were Custody Seals Present?	No	12. Any air bubbles in the VOA vials?	N/A
3. Were Custody Seals Intact?	N/A	13. Holding times exceeded?	No
4. Is Radiation count < 100 CPM?	Yes	14. Sufficient sample volumes?	Yes
5. Is a cooler present?	Yes	15. Any Subcontracting needed?	* Yes
Cooler Temp: **3.2**		16. Are ESS labels on correct containers?	**Yes|No**
Iced With: **Ice**		17. Were samples received intact?	**Yes|No**
6. Was COC included with samples?	Yes	ESS Sample IDs: 2, 5, 6, 9, 12	
7. Was COC signed and dated by client?	Yes	Sub Lab: ~~STL~~ / TA	
8. Does the COC match the sample	Yes	Analysis: TOC	
9. Is COC complete and correct?	Yes	TAT: 4d.	

18. Was there need to call project manager to discuss status? If yes, please explain.

ESS Laboratory Work Order Number: 1308110

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 1:29 pm, Aug 20, 2013

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibratins, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

SAMPLE RECEIPT

The following samples were received on August 07, 2013 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Question I: All samples for SVOA were analyzed for a subset of the required MCP list per the client's request.

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	a. VPH, EPH, APH and TO-15 only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
PT	Pentachlorophenol tailing factor > 2.
ICV-	Initial Calibration Verification recovery is below lower control limit (ICV-).
ICV	Initial Calibration Verification recovery is outside of control limit (ICV).
D	Diluted.
C+	Continuing Calibration recovery is above upper control limit (C+).
C-	Continuing Calibration recovery is below lower control limit (C-).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 200-17862-4

Laboratory: TestAmerica Burlington

Narrative

CASE NARRATIVE

Client: ESS Laboratory

Project: Soil Analysis

Report Number: 200-17862-4

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 08/09/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.4 C.

TOTAL ORGANIC CARBON

Samples 1308110-2, 1308110-5, 1308110-6, 1308110-9 and 1308110-12 were analyzed for total organic carbon in accordance with Lloyd Kahn Method. The samples were analyzed on 08/14/2013.

TOC Result 2 was detected in method blank MB 200-59843/31 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No other difficulties were encountered during the TOC analysis.

All other quality control parameters were within the acceptance limits.

After printing this label:
1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.
Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com.FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery,misdelivery,or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim.Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental,consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss.Maximum for items of extraordinary value is $1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	Lab does not accept radioactive samples.
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.4ºC IR GUN ID 181/CF=-0.2
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	Refer to Job Narrative for details.
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Received extra samples not listed on COC.
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	False	Refer to Job Narrative for details.
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A	

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 13080110
Date Project Due: 8/13/13
Days For Project: 4 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present?	* No	10. Are the samples properly preserved?	Yes
Air No.:		11. Proper sample containers used?	Yes
2. Were Custody Seals Present?	No	12. Any air bubbles in the VOA vials?	N/A
3. Were Custody Seals Intact?	N/A	13. Holding times exceeded?	No
4. Is Radiation count < 100 CPM?	Yes	14. Sufficient sample volumes?	Yes
5. Is a cooler present?	Yes	15. Any Subcontracting needed?	* Yes
Cooler Temp: **4.1**		16. Are ESS labels on correct containers?	**Yes|No**
Iced With: **Ice**		17. Were samples received intact?	**Yes|No**
6. Was COC included with samples?	Yes	ESS Sample IDs: 1,3,6,7,9,11,12,14,18,no	
7. Was COC signed and dated by client?	Yes	Sub Lab: ~~Stuliy~~ NA	
8. Does the COC match the sample	Yes	Analysis: TOC	
9. Is COC complete and correct?	Yes	TAT: 4 day	

18. Was there need to call project manager to discuss status? If yes, please explain.

RE: Everett (01.0171521.02)
ESS Laboratory Work Order Number: 1308242

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laboratory Director

REVIEWED
By ESS Laboratory at 4:51 pm, Aug 16, 2013

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibratins, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

ESS Laboratory Work Order: 1308242

SAMPLE RECEIPT

The following samples were received on August 14, 2013 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

These samples were originally received on 7/31/13 as ESS Laboratory Sample IDs 1308004-03 & 1308004-04.

ESS Laboratory Work Order: 1308485

SAMPLE RECEIPT

The following samples were received on August 22, 2013 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Sample 1308485-01 was originally received on August 7, 2013 as ESS Laboratory Sample ID 1308098-12. Samples 1308485-02 and 1308485-03 were originally received on August 7, 2013 as ESS Laboratory Sample IDs 1308105-01 and 1308105-07. Sample 1308485-04 was originally received on August 7, 2013 as ESS Laboratory Sample ID 1308106-17. Samples 1308485-05 and 1308485-06 were originally received on August 7, 2013 as ESS Laboratory Sample IDs 1308108-05 and 1308108-13. Samples 1308485-07, 1308485-08 and 1308485-09 were originally received on August 7, 2013 as ESS Laboratory Sample IDs 1308109-07, 1308109-09 and 1308109-09.

Question I: All samples for SVOA were analyzed for a subset of the required MCP list per the client's request.

MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **1308485-01 through 1308485-09**

Matrices: ( ) Ground Water/Surface Water (X) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

CAM Protocol (check all that apply below):

( ) 8260 VOC CAM II A	( ) 7470/7471 Hg CAM III B	( ) MassDEP VPH CAM IV A	(X) 8081 Pesticides CAM V B	( ) 7196 Hex Cr CAM VI B	( ) MassDEP APH CAM IX A
(X) 8270 SVOC CAM II B	( ) 7010 Metals CAM III C	(X) MassDEP EPH CAM IV B	( ) 8151 Herbicides CAM V C	( ) 8330 Explosives CAM VIII A	( ) TO-15 VOC CAM IX B
( ) 6010 Metals CAM III A	( ) 6020 Metals CAM III D	(X) 8082 PCB CAM V A	( ) 6860 Perchlorate CAM VIII B	( ) 9014 Total Cyanide/PAC CAM VI A	

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes ( ) No (X)
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	a. VPH, EPH, APH and TO-15 only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

***All negative responses must be addressed in an attached laboratory narrative.**

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.
