Notes and Definitions

U	Analyte included in the analysis, but not detected
SM	Surrogate recovery(ies) outside of criteria due to matrix (UCM/coelution/matrix is present) (SM).
Q	Calibration required quadratic regression (Q).
P	Percent difference between primary and confirmation results exceeds 40% (P).
LC	Lower value is used due to matrix interferences (LC).
ICV	Initial Calibration Verification recovery is outside of control limit (ICV).
H	Estimated value. Sample hold times were exceeded (H).
EL	Elevated Method Reporting Limits due to sample matrix (EL).
D+	Relative percent difference for duplicate is outside of criteria (D+).
D	Diluted.
C+	Continuing Calibration recovery is above upper control limit (C+).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 13080485
Date Project Due: 8/29/13
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present?	* No	10. Are the samples properly preserved?	Yes
Air No.:		11. Proper sample containers used?	Yes
2. Were Custody Seals Present?	No	12. Any air bubbles in the VOA vials?	N/A
3. Were Custody Seals Intact?	N/A	13. Holding times exceeded?	No
4. Is Radiation count < 100 CPM?	Yes	14. Sufficient sample volumes?	Yes
5. Is a cooler present?	Yes	15. Any Subcontracting needed?	No
Cooler Temp: **4.1**		16. Are ESS labels on correct containers?	Yes | No
Iced With: **Ice**		17. Were samples received intact?	Yes | No
6. Was COC included with samples?	Yes	ESS Sample IDs: _____	
7. Was COC signed and dated by client?	Yes	Sub Lab: _____	
8. Does the COC match the sample	Yes	Analysis: _____	
9. Is COC complete and correct?	Yes	TAT: _____	

18. Was there need to call project manager to discuss status? If yes, please explain.
OK to run samples past holdtimes per client. See email relog of 1308098, 1308105, 1308106, 1308108 and 1308109. 8/22/13

Who was called?:_____ By whom? _____

Sample Number	Properly Preserved	Container Type	# of Containers	Preservative
1	Yes	8 oz Soil Jar	1	NP
2	Yes	8 oz Soil Jar	1	NP
3	Yes	8 oz Soil Jar	1	NP
4	Yes	4 oz Soil Jar	1	NP
5	Yes	8 oz Soil Jar	1	NP
6	Yes	8 oz Soil Jar	1	NP
7	Yes	8 oz Soil Jar	1	NP
8	Yes	8 oz Soil Jar	1	NP

RE: Wynn Everett Sediment Phase (01.0171521.13 Task 001)
ESS Laboratory Work Order Number: 1503414

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 3:09 pm, Apr 01, 2015

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

ESS Laboratory Work Order: 1503414

SAMPLE RECEIPT

The following samples were received on March 25, 2015 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Notes and Definitions

ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
[2C]	Result was taken from the second column. Dual column analysis.

Qualifiers

General Chemistry

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 200-27247-1

Laboratory: TestAmerica Burlington

Narrative

CASE NARRATIVE

Client: ESS Laboratory

Project: 1503414

Report Number: 200-27247-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 03/26/2015; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.2 C.

TOTAL ORGANIC CARBON

Samples 1503414-01, 1503414-02, 1503414-03, 1503414-04, 1503414-05, 1503414-06, 1503414-07, 1503414-08, 1503414-09 and 1503414-10 were analyzed for total organic carbon in accordance with Lloyd Kahn Method. The samples were analyzed on 03/27/2015.

Total Organic Carbon was detected in method blank MB 200-86185/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	Lab does not accept radioactive samples.
The cooler's custody seal, if present, is intact.	True	TAMPER EVIDENT TAPE
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.2ºC
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	IDs on containers do not match the COC. Logged in per COC.
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

RE: Wynn Everett Sediment Phase (01.0171521.13 Task 001)
ESS Laboratory Work Order Number: 1503415

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 5:24 pm, Apr 07, 2015

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: Wynn Everett Sediment Phase

ESS Laboratory Work Order: 1503415

SAMPLE RECEIPT

The following samples were received on March 25, 2015 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Low Level VOA vials were frozen by ESS Laboratory on March 25, 2105 at 1429.

Question I: Samples GZ-202 (2-4), GZ-203 (4-6), GZ-204 (6-8), GZ-212 (0.5-2), GZ-216 (4-6), and GZ-217 (6-8) samples for SVOC were analyzed for a subset of the required MCP list per the client's request.

Samples were decanted, per client request, upon receipt by ESS.

CURRENT SW-846 METHODOLOGY VERSIONS

Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015D - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH / VPH

Prep Methods

3005A - Aqueous ICP and Graphite Furnace Digestion
3020A - Aqueous ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035 - Solid Purge and Trap

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: Wynn Everett Sediment Phase

ESS Laboratory Work Order: 1503415

MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **1503415-01 through 1503415-42**

Matrices: ( ) Ground Water/Surface Water (X) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

CAM Protocol (check all that apply below):

(X) 8260 VOC CAM II A	(X) 7470/7471 Hg CAM III B	( ) MassDEP VPH CAM IV A	( ) 8081 Pesticides CAM V B	( ) 7196 Hex Cr CAM VI B	( ) MassDEP APH CAM IX A
(X) 8270 SVOC CAM II B	(X) 7010 Metals CAM III C	(X) MassDEP EPH CAM IV B	( ) 8151 Herbicides CAM V C	( ) 8330 Explosives CAM VIII A	( ) TO-15 VOC CAM IX B
(X) 6010 Metals CAM III A	( ) 6020 Metals CAM III D	(X) 8082 PCB CAM V A	( ) 6860 Perchlorate CAM VIII B	( ) 9014 Total Cyanide/PAC CAM VI A	

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	a. VPH, EPH, APH and TO-15 only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

****All negative responses must be addressed in an attached laboratory narrative.***

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Notes and Definitions

M-	Matrix Spike recovery is below lower control limit (M-).
B-	Blank Spike recovery is below lower control limit (B-).
B+	Blank Spike recovery is above upper control limit (B+).
C-	Continuing Calibration recovery is below lower control limit (C-).
C+	Continuing Calibration recovery is above upper control limit (C+).
D	Diluted.
D+	Relative percent difference for duplicate is outside of criteria (D+).
E	Reported above the quantitation limit; Estimated value (E).
EL	Elevated Method Reporting Limits due to sample matrix (EL).
H	Estimated value. Sample hold times were exceeded (H).
B	Present in Method Blank (B).
IC	Internal Standard(s) outside of criteria. Sample was reanalyzed to confirm (IC).
Z-10a	Soil pH measured in water at 16.8 ºC.
M+	Matrix Spike recovery is above upper control limit (M+).
Q	Calibration required quadratic regression (Q).
S-	Surrogate recovery(ies) below lower control limit (S-).
S+	Surrogate recovery(ies) above upper control limit (S+).
SD	Surrogate recovery(ies) diluted below the MRL (SD).
U	Analyte included in the analysis, but not detected
WL	Results obtained from a deionized water leach of the sample.
Z-08	See Attached
Z-10	Soil pH measured in water at 16.4 ºC.
I	Internal Standard(s) outside of criteria (I).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
[2C]	Result was taken from the second column. Dual column analysis.

RE: Wynn Everett Sediment Phase (01.0171521.13 Task 001)
ESS Laboratory Work Order Number: 1503442

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 1:56 pm, Apr 02, 2015

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

TestAmerica Laboratories, Inc. - Burlington, VT	Total Organic Carbon

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: Wynn Everett Sediment Phase

ESS Laboratory Work Order: 1503442

SAMPLE RECEIPT

The following samples were received on March 26, 2015 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

CURRENT SW-846 METHODOLOGY VERSIONS

Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015D - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH / VPH

Prep Methods

3005A - Aqueous ICP and Graphite Furnace Digestion
3020A - Aqueous ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035 - Solid Purge and Trap

Notes and Definitions

ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
[2C]	Result was taken from the second column. Dual column analysis.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

General Chemistry

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 200-27279-1

Laboratory: TestAmerica Burlington

Narrative

CASE NARRATIVE

Client: ESS Laboratory

Project: 1503442

Report Number: 200-27279-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 03/27/2015; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 4.6° C.

TOTAL ORGANIC CARBON

Samples 1503442-01, 1503442-02, 1503442-03, 1503442-04, 1503442-05, 1503442-06, 1503442-07, 1503442-08, 1503442-09, 1503442-10, 1503442-11, 1503442-12, 1503442-13, 1503442-14, 1503442-15 and 1503442-16 were analyzed for total organic carbon in accordance with Lloyd Kahn Method. The samples were analyzed on 03/28/2015.

Total Organic Carbon was detected in method blank MB 200-86237/10 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

SDG Number: 1503442

Login Number: 27279
List Number: 1
Creator: Goodrich, Kenneth L

List Source: TestAmerica Burlington

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	Lab does not accept radioactive samples.
The cooler's custody seal, if present, is intact.	True	NO NUMBERS
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	4.6ºC
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	Not requested on COC.
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 15030442
Date Project Due: 4/2/15
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present?	* No	10. Are the samples properly preserved?	Yes
Air No.:		11. Proper sample containers used?	Yes
2. Were Custody Seals Present?	No	12. Any air bubbles in the VOA vials?	N/A
3. Were Custody Seals Intact?	N/A	13. Holding times exceeded?	No
4. Is Radiation count < 100 CPM?	Yes	14. Sufficient sample volumes?	Yes
5. Is a cooler present?	Yes	15. Any Subcontracting needed?	* Yes
Cooler Temp: **4.2**		16. Are ESS labels on correct containers?	Yes|No
Iced With: **Ice**		17. Were samples received intact?	Yes|No
6. Was COC included with samples?	Yes	ESS Sample IDs:	01-16
7. Was COC signed and dated by client?	Yes	Sub Lab:	Test America
8. Does the COC match the sample	Yes	Analysis:	TOC-LK
9. Is COC complete and correct?	Yes	TAT:	5 DAY

18. Was there need to call project manager to discuss status? If yes, please explain.

RE: Wynn Everett Sediment Phase (01.0171521.13 Task 001)
ESS Laboratory Work Order Number: 1503447

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 9:37 am, Apr 10, 2015

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Subcontracted Analyses

CTS - Cranston, RI	Grain Size Analysis, Percent Water

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: Wynn Everett Sediment Phase

ESS Laboratory Work Order: 1503447

SAMPLE RECEIPT

The following samples were received on March 26, 2015 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Low Level VOA vials were frozen by ESS Laboratory on March 26, 2015 at 1218.

Question I: Samples GZ-209 (6-8), GZ-208 (4-6), GZ-207 (4-6), and GZ-207 (6-7.5) for SVOC were analyzed for a subset of the required MCP list per the client's request.

All samples were decanted, per client request, upon receipt by ESS.

CURRENT SW-846 METHODOLOGY VERSIONS

Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015D - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH / VPH

Prep Methods

3005A - Aqueous ICP and Graphite Furnace Digestion
3020A - Aqueous ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035 - Solid Purge and Trap

MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **1503447-01 through 1503447-29**

Matrices: ( ) Ground Water/Surface Water (X) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

CAM Protocol (check all that apply below):

(X) 8260 VOC CAM II A	(X) 7470/7471 Hg CAM III B	( ) MassDEP VPH CAM IV A	( ) 8081 Pesticides CAM V B	( ) 7196 Hex Cr CAM VI B	( ) MassDEP APH CAM IX A
(X) 8270 SVOC CAM II B	(X) 7010 Metals CAM III C	(X) MassDEP EPH CAM IV B	( ) 8151 Herbicides CAM V C	( ) 8330 Explosives CAM VIII A	( ) TO-15 VOC CAM IX B
(X) 6010 Metals CAM III A	( ) 6020 Metals CAM III D	(X) 8082 PCB CAM V A	( ) 6860 Perchlorate CAM VIII B	( ) 9014 Total Cyanide/PAC CAM VI A	

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	a. VPH, EPH, APH and TO-15 only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

****All negative responses must be addressed in an attached laboratory narrative.***

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Notes and Definitions

LC	Lower value is used due to matrix interferences (LC).
B+	Blank Spike recovery is above upper control limit (B+).
C-	Continuing Calibration recovery is below lower control limit (C-).
C+	Continuing Calibration recovery is above upper control limit (C+).
D	Diluted.
D+	Relative percent difference for duplicate is outside of criteria (D+).
EL	Elevated Method Reporting Limits due to sample matrix (EL).
B-	Blank Spike recovery is below lower control limit (B-).
IM	Internal Standard(s) outside of criteria due to matrix (UCM/coelution is present) (IM).
Z-10	Soil pH measured in water at 16.3 ºC.
P	Percent difference between primary and confirmation results exceeds 40% (P).
PT	Pentachlorophenol tailing factor > 2.
S-	Surrogate recovery(ies) below lower control limit (S-).
SD	Surrogate recovery(ies) diluted below the MRL (SD).
U	Analyte included in the analysis, but not detected
WL	Results obtained from a deionized water leach of the sample.
Z-08	See Attached
H	Estimated value. Sample hold times were exceeded (H).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
[2C]	Result was taken from the second column. Dual column analysis.

RE: Wynn Everett Sediment Phase (01.0171521.13 Task 001)
ESS Laboratory Work Order Number: 1503448

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 9:48 am, Apr 10, 2015

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

ESS Laboratory Work Order: 1503448

SAMPLE RECEIPT

The following samples were received on March 26, 2015 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Low Level VOA vials were frozen by ESS Laboratory on March 26, 2015 at 1325.

Question I: Samples GZ-205 (4-6), GZ-205 (6-8), GZ--213 (4-6), GZ-218 (4-6), and GZ-219 (4-6) samples for SVOC were analyzed for a subset of the required MCP list per the client's request.

Samples were decanted, per client request, upon receipt by ESS.

CC52627-BSD1 **Blank Spike recovery is above upper control limit (B+).**
Bromomethane (152% @ 70-130%)

CC52716-BS1 **Blank Spike recovery is above upper control limit (B+).**
Acetone (160% @ 70-130%), Bromomethane (155% @ 70-130%)

CC52716-BSD1 **Blank Spike recovery is above upper control limit (B+).**
Bromomethane (150% @ 70-130%)

CC52716-BSD1 **Relative percent difference for duplicate is outside of criteria (D+).**
Acetone (55% @ 25%)

CYC0308-CCV1 **Continuing Calibration recovery is above upper control limit (C+).**
Bromomethane (171% @ 70-130%)

CYC0324-CCV1 **Continuing Calibration recovery is above upper control limit (C+).**
Bromomethane (150% @ 70-130%)

5035/8260B Volatile Organic Compounds / Methanol

1503448-01 **Present in Method Blank (B).**
Acetone

CC52745-BS1 **Blank Spike recovery is above upper control limit (B+).**
Acetone (141% @ 70-130%)

CC52745-BSD1 **Blank Spike recovery is above upper control limit (B+).**
Acetone (140% @ 70-130%)

8082A Polychlorinated Biphenyls (PCB)

1503448-29 **Surrogate recovery(ies) diluted below the MRL (SD).**
Decachlorobiphenyl (% @ 30-150%), Decachlorobiphenyl [2C] (% @ 30-150%), Tetrachloro-m-xylene (% @ 30-150%), Tetrachloro-m-xylene [2C] (% @ 30-150%)

1503448-30 **Percent difference between primary and confirmation results exceeds 40% (P).**
Aroclor 1248 , Aroclor 1260

1503448-31 **Surrogate recovery(ies) diluted below the MRL (SD).**
Decachlorobiphenyl (% @ 30-150%), Decachlorobiphenyl [2C] (% @ 30-150%), Tetrachloro-m-xylene (% @ 30-150%), Tetrachloro-m-xylene [2C] (% @ 30-150%)

1503448-32 **Percent difference between primary and confirmation results exceeds 40% (P).**
Aroclor 1248

1503448-34 **Lower value is used due to matrix interferences (LC).**
Aroclor 1248

1503448-34 **Percent difference between primary and confirmation results exceeds 40% (P).**
Aroclor 1248

1503448-36 **Percent difference between primary and confirmation results exceeds 40% (P).**

MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **1503448-01 through 1503448-37**

Matrices: ( ) Ground Water/Surface Water (X) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

CAM Protocol (check all that apply below):

(X) 8260 VOC CAM II A	(X) 7470/7471 Hg CAM III B	( ) MassDEP VPH CAM IV A	( ) 8081 Pesticides CAM V B	(X) 7196 Hex Cr CAM VI B	( ) MassDEP APH CAM IX A
(X) 8270 SVOC CAM II B	(X) 7010 Metals CAM III C	(X) MassDEP EPH CAM IV B	( ) 8151 Herbicides CAM V C	( ) 8330 Explosives CAM VIII A	( ) TO-15 VOC CAM IX B
(X) 6010 Metals CAM III A	( ) 6020 Metals CAM III D	(X) 8082 PCB CAM V A	( ) 6860 Perchlorate CAM VIII B	( ) 9014 Total Cyanide/PAC CAM VI A	

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes ( ) No (X)
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	a. VPH, EPH, APH and TO-15 only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Notes and Definitions

P	Percent difference between primary and confirmation results exceeds 40% (P).
B-	Blank Spike recovery is below lower control limit (B-).
B+	Blank Spike recovery is above upper control limit (B+).
C-	Continuing Calibration recovery is below lower control limit (C-).
C+	Continuing Calibration recovery is above upper control limit (C+).
D	Diluted.
D+	Relative percent difference for duplicate is outside of criteria (D+).
E	Reported above the quantitation limit; Estimated value (E).
EL	Elevated Method Reporting Limits due to sample matrix (EL).
H	Estimated value. Sample hold times were exceeded (H).
B	Present in Method Blank (B).
LC	Lower value is used due to matrix interferences (LC).
Z-10c	Soil pH measured in water at 17.3 ºC.
PT	Pentachlorophenol tailing factor > 2.
S-	Surrogate recovery(ies) below lower control limit (S-).
SD	Surrogate recovery(ies) diluted below the MRL (SD).
U	Analyte included in the analysis, but not detected
WL	Results obtained from a deionized water leach of the sample.
Z-08	See Attached
Z-10	Soil pH measured in water at 13.7 ºC.
Z-10a	Soil pH measured in water at 14.8 ºC.
Z-10b	Soil pH measured in water at 15.0 ºC.
IM	Internal Standard(s) outside of criteria due to matrix (UCM/coelution is present) (IM).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
[2C]	Result was taken from the second column. Dual column analysis.

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 15030448
Date Project Due: 4/2/15
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present?	* No	10. Are the samples properly preserved?	Yes
Air No.:		11. Proper sample containers used?	Yes
2. Were Custody Seals Present?	No	12. Any air bubbles in the VOA vials?	N/A
3. Were Custody Seals Intact?	N/A	13. Holding times exceeded?	No
4. Is Radiation count < 100 CPM?	Yes	14. Sufficient sample volumes?	Yes
5. Is a cooler present?	Yes	15. Any Subcontracting needed?	* Yes
Cooler Temp: **4.2**		16. Are ESS labels on correct containers?	**Yes|No**
Iced With: **Ice**		17. Were samples received intact?	**Yes|No**
6. Was COC included with samples?	Yes	ESS Sample IDs: _____	
7. Was COC signed and dated by client?	Yes	Sub Lab: _____	
8. Does the COC match the sample	Yes	Analysis: _____	
9. Is COC complete and correct?	Yes	TAT: _____	

18. Was there need to call project manager to discuss status? If yes, please explain.
Added -29 to -37 for PCB Drying VF 3/20/15

RE: Wynn Everett Sediment Phase (01.0171521.13 Task 001)
ESS Laboratory Work Order Number: 1503480

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 3:16 pm, Apr 06, 2015

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

ESS Laboratory Work Order: 1503480

SAMPLE RECEIPT

The following samples were received on March 27, 2015 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Notes and Definitions

ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
[2C]	Result was taken from the second column. Dual column analysis.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

General Chemistry

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
^	Instrument related QC exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 200-27289-1

Laboratory: TestAmerica Burlington

Narrative

CASE NARRATIVE

Client: ESS Laboratory

Project: 1503480

Report Number: 200-27289-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 03/28/2015; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.8º C.

TOTAL ORGANIC CARBON

Samples 1503480-01, 1503480-02, 1503480-03, 1503480-04, 1503480-05, 1503480-06, 1503480-07, 1503480-08, 1503480-09, 1503480-10, 1503480-11 and 1503480-12 were analyzed for total organic carbon in accordance with Lloyd Kahn Method. The samples were analyzed on 03/30/2015, 03/31/2015 and 04/01/2015.

Total Organic Carbon was detected in method blank MB 200-86277/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Total Organic Carbon was detected in method blank MB 200-86321/13 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Total Organic Carbon was detected in method blank MB 200-86386/5 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	Lab does not accept radioactive samples.
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.8ºC
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A	

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 15030480
Date Project Due: 4/3/15
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present?	* No	10. Are the samples properly preserved?	Yes
Air No.:		11. Proper sample containers used?	Yes
2. Were Custody Seals Present?	No	12. Any air bubbles in the VOA vials?	N/A
3. Were Custody Seals Intact?	N/A	13. Holding times exceeded?	No
4. Is Radiation count < 100 CPM?	Yes	14. Sufficient sample volumes?	Yes
5. Is a cooler present?	Yes	15. Any Subcontracting needed?	* Yes
Cooler Temp: **3.0**		16. Are ESS labels on correct containers?	**Yes** | **No**
Iced With: **Ice**		17. Were samples received intact?	**Yes** | **No**
6. Was COC included with samples?	Yes	ESS Sample IDs:	01 - 12
7. Was COC signed and dated by client?	Yes	Sub Lab:	Test America
8. Does the COC match the sample	Yes	Analysis:	TOC - LK
9. Is COC complete and correct?	Yes	TAT:	5 Day

18. Was there need to call project manager to discuss status? If yes, please explain.

RE: Wynn Everett Sediment Phase (01.0171521.13 Task 001)
ESS Laboratory Work Order Number: 1503482

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 11:39 am, Apr 10, 2015

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: Wynn Everett Sediment Phase

ESS Laboratory Work Order: 1503482

SAMPLE RECEIPT

The following samples were received on March 27, 2015 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Question I: Samples LC-101 2ft-4ft, LC-101 6ft-8ft, LC-103 2ft-4ft, LC-103 4f-6ft, LC-104 0.5ft-2ft, LC-105 2ft-4ft, LL-109 4ft-6ft and LC-108 0.5ft-2ft (1503482-02, 1503482-03, 1503482-07, 1503482-08, 1503482-10, 1503482-12, 1503482-15 and 1503482-17 respectively) for SVOA were analyzed for a subset of the required MCP list per the client's request.

Samples were decanted, per client request, upon receipt by ESS.

PROJECT NARRATIVE

8082A Polychlorinated Biphenyls (PCB)

1503482-41	**Percent difference between primary and confirmation results exceeds 40% (P).** Aroclor 1248 , Aroclor 1254
1503482-42	**Percent difference between primary and confirmation results exceeds 40% (P).** Aroclor 1248
1503482-43	**Percent difference between primary and confirmation results exceeds 40% (P).** Aroclor 1248
1503482-43	**Surrogate recovery(ies) diluted below the MRL (SD).** Decachlorobiphenyl (% @ 30-150%), Decachlorobiphenyl [2C] (% @ 30-150%), Tetrachloro-m-xylene (% @ 30-150%), Tetrachloro-m-xylene [2C] (% @ 30-150%)
1503482-44	**Percent difference between primary and confirmation results exceeds 40% (P).** Aroclor 1248
1503482-45	**Percent difference between primary and confirmation results exceeds 40% (P).** Aroclor 1248 , Aroclor 1260
1503482-48	**Percent difference between primary and confirmation results exceeds 40% (P).** Aroclor 1248
1503482-50	**Lower value is used due to matrix interferences (LC).** Aroclor 1248
1503482-50	**Percent difference between primary and confirmation results exceeds 40% (P).** Aroclor 1248
1503482-51	**Surrogate recovery(ies) outside of criteria. Reextraction/Reanalysis confirms results (SC).** Decachlorobiphenyl [2C] (29% @ 30-150%)
1503482-51RE1	**Surrogate recovery(ies) outside of criteria. Reextraction/Reanalysis confirms results (SC).** Decachlorobiphenyl [2C] (25% @ 30-150%), Tetrachloro-m-xylene (18% @ 30-150%), Tetrachloro-m-xylene [2C] (17% @ 30-150%)
1503482-52	**Surrogate recovery(ies) diluted below the MRL (SD).** Decachlorobiphenyl (% @ 30-150%), Decachlorobiphenyl [2C] (% @ 30-150%), Tetrachloro-m-xylene (% @ 30-150%), Tetrachloro-m-xylene [2C] (% @ 30-150%)

8270D Semi-Volatile Organic Compounds

1503482-18	**Internal Standard(s) outside of criteria due to matrix (UCM/coelution is present) (IM).** Chrysene-d12 (212% @ 50-200%)
CD50329-BS1	**Blank Spike recovery is below lower control limit (B-).** Aniline (30% @ 40-140%)
CD50329-BSD1	**Relative percent difference for duplicate is outside of criteria (D+).** Aniline (37% @ 30%)
CYC0367-CCV1	**Continuing Calibration recovery is above upper control limit (C+).** 2,4,6-Tribromophenol (131% @ 80-120%), 4-Nitrophenol (139% @ 80-120%)
CYC0367-CCV1	**Continuing Calibration recovery is below lower control limit (C-).** bis(2-chloroisopropyl)Ether (79% @ 80-120%)
CYC0367-TUN1	**Pentachlorophenol tailing factor > 2.**
CYC0371-CCV1	**Continuing Calibration recovery is above upper control limit (C+).**

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: Wynn Everett Sediment Phase ESS Laboratory Work Order: 1503482

2,4,6-Tribromophenol (131% @ 80-120%), 4-Nitrophenol (128% @ 80-120%), p-Terphenyl-d14 (122% @ 80-120%)

CYC0371-CCV1 **Continuing Calibration recovery is below lower control limit (C-).**
bis(2-chloroisopropyl)Ether (77% @ 80-120%)

CYC0371-TUN1 **Pentachlorophenol tailing factor > 2.**

CYD0019-CCV1 **Continuing Calibration recovery is above upper control limit (C+).**
Azobenzene (124% @ 80-120%)

8270D(SIM) Polynuclear Aromatic Hydrocarbons

1503482-15 **Elevated Method Reporting Limits due to sample matrix (EL).**
Hexachlorobenzene

CC53111-BSD1 **Relative percent difference for duplicate is outside of criteria (D+).**
Acenaphthylene (40% @ 30%), Benzo(a)pyrene (33% @ 30%)

CYD0062-CCV1 **Continuing Calibration recovery is above upper control limit (C+).**
2-Methylnaphthalene (144% @ 70-130%)

MADEP-EPH Extractable Petroleum Hydrocarbons

CYC0372-CCV4 **Continuing Calibration recovery is above upper control limit (C+).**
Dibenzo(a,h)Anthracene (122% @ 80-120%)

No other observations noted.

CURRENT SW-846 METHODOLOGY VERSIONS

Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015D - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH / VPH

Prep Methods

3005A - Aqueous ICP and Graphite Furnace Digestion
3020A - Aqueous ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035 - Solid Purge and Trap

MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **1503482-01 through 1503482-52**

Matrices: ( ) Ground Water/Surface Water (X) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

CAM Protocol (check all that apply below):

( ) 8260 VOC CAM II A	(X) 7470/7471 Hg CAM III B	( ) MassDEP VPH CAM IV A	( ) 8081 Pesticides CAM V B	( ) 7196 Hex Cr CAM VI B	( ) MassDEP APH CAM IX A
(X) 8270 SVOC CAM II B	(X) 7010 Metals CAM III C	(X) MassDEP EPH CAM IV B	( ) 8151 Herbicides CAM V C	( ) 8330 Explosives CAM VIII A	( ) TO-15 VOC CAM IX B
(X) 6010 Metals CAM III A	( ) 6020 Metals CAM III D	(X) 8082 PCB CAM V A	( ) 6860 Perchlorate CAM VIII B	( ) 9014 Total Cyanide/PAC CAM VI A	

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes (X) No ( )
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	a. VPH, EPH, APH and TO-15 only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Notes and Definitions

U	Analyte included in the analysis, but not detected
SD	Surrogate recovery(ies) diluted below the MRL (SD).
SC	Surrogate recovery(ies) outside of criteria. Reextraction/Reanalysis confirms results (SC).
PT	Pentachlorophenol tailing factor > 2.
P	Percent difference between primary and confirmation results exceeds 40% (P).
LC	Lower value is used due to matrix interferences (LC).
IM	Internal Standard(s) outside of criteria due to matrix (UCM/coelution is present) (IM).
EL	Elevated Method Reporting Limits due to sample matrix (EL).
D+	Relative percent difference for duplicate is outside of criteria (D+).
D	Diluted.
C+	Continuing Calibration recovery is above upper control limit (C+).
C-	Continuing Calibration recovery is below lower control limit (C-).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
[2C]	Result was taken from the second column. Dual column analysis.

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 15030482
Date Project Due: 4/3/15
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present?	* No	10. Are the samples properly preserved?	Yes
Air No.:		11. Proper sample containers used?	Yes
2. Were Custody Seals Present?	No	12. Any air bubbles in the VOA vials?	N/A
3. Were Custody Seals Intact?	N/A	13. Holding times exceeded?	No
4. Is Radiation count < 100 CPM?	Yes	14. Sufficient sample volumes?	Yes
5. Is a cooler present?	Yes	15. Any Subcontracting needed?	No
Cooler Temp: **3.0**		16. Are ESS labels on correct containers?	**Yes|No**
Iced With: **Ice**		17. Were samples received intact?	**(Yes)|No**
6. Was COC included with samples?	Yes	ESS Sample IDs: _____	
7. Was COC signed and dated by client?	Yes	Sub Lab: _____	
8. Does the COC match the sample	Yes	Analysis: _____	
9. Is COC complete and correct?	Yes	TAT: _____	

18. Was there need to call project manager to discuss status? If yes, please explain.

CERTIFICATE OF ANALYSIS

David E Leone
GZA GeoEnvironmental, Inc.
249 Vanderbilt Avenue
Norwood, MA 02062

RE: Wynn Everett Sediment Phase (01.0171521.13 Task 001)
ESS Laboratory Work Order Number: 1503510

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 1:06 pm, Apr 08, 2015

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

TestAmerica Laboratories, Inc. - Burlington, VT	Total Organic Carbon

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: Wynn Everett Sediment Phase

ESS Laboratory Work Order: 1503510

SAMPLE RECEIPT

The following samples were received on March 27, 2015 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Notes and Definitions

ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
[2C]	Result was taken from the second column. Dual column analysis.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

General Chemistry

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 200-27316-1

Laboratory: TestAmerica Burlington

Narrative

CASE NARRATIVE

Client: ESS Laboratory

Project: 1503510

Report Number: 200-27316-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 03/31/2015; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.4° C.

TOTAL ORGANIC CARBON

Samples 1503510-01, 1503510-02, 1503510-03, 1503510-04, 1503510-05, 1503510-06, 1503510-07, 1503510-08, 1503510-09 and 1503510-10 were analyzed for total organic carbon in accordance with Lloyd Kahn Method. The samples were analyzed on 03/31/2015 and 04/01/2015.

Total Organic Carbon was detected in method blank MB 200-86321/13 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

The concentration of total organic carbon (TOC) associated with the following sample(s) exceeded the instrument calibration range: 1503510-07. Due to the low sample mass used for this procedure, further dilution of the sample is not practical and would adversely impact the confidence level for the results. The analyte has been qualified and the peak did not saturate the instrument detector.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	Lab does not accept radioactive samples.
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.4ºC
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A	

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 15030510
Date Project Due: 4/3/15
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present?	* No	10. Are the samples properly preserved?	Yes
Air No.:		11. Proper sample containers used?	Yes
2. Were Custody Seals Present?	No	12. Any air bubbles in the VOA vials?	N/A
3. Were Custody Seals Intact?	N/A	13. Holding times exceeded?	No
4. Is Radiation count < 100 CPM?	Yes	14. Sufficient sample volumes?	Yes
5. Is a cooler present?	Yes	15. Any Subcontracting needed?	* Yes
Cooler Temp: **3.5**		16. Are ESS labels on correct containers?	**Yes|No**
Iced With: **Ice**		17. Were samples received intact?	**Yes|No**
6. Was COC included with samples?	Yes	ESS Sample IDs:	01-10
7. Was COC signed and dated by client?	Yes	Sub Lab:	Test America
8. Does the COC match the sample	Yes	Analysis:	TOC - LK
9. Is COC complete and correct?	Yes	TAT:	5 DAY

18. Was there need to call project manager to discuss status? If yes, please explain.

RE: Wynn Everett Sediment Phase (01.0171521.13 Task 001)
ESS Laboratory Work Order Number: 1503512

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 5:26 pm, Apr 10, 2015

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Subcontracted Analyses

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: Wynn Everett Sediment Phase

ESS Laboratory Work Order: 1503512

SAMPLE RECEIPT

The following samples were received on March 27, 2015 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Low Level VOA vials were frozen by ESS Laboratory on March 27, 2015 at 19:54.

Question I: Samples GZ-225 4ft-6ft, GZ-225 6ft-7ft 2in, GZ-201 4ft-5ft, LC-106 4ft-6ft, LC-110 2ft-4ft, LC-111 0.5ft-2ft and LC-111 4ft-6ft (1503512-02, 1503512-03, 1503512-06, 1503512-10, 1503512-12, 1503512-14 and 1503512-15) for SVOA were analyzed for a subset of the required MCP list per the client's request.

Samples were decanted, per client request, upon reciept by ESS.

CYD0019-CCV1 **Continuing Calibration recovery is above upper control limit (C+).**
Azobenzene (124% @ 80-120%)

CYD0021-CCV1 **Continuing Calibration recovery is above upper control limit (C+).**
Di-n-octylphthalate (123% @ 80-120%)

CYD0021-CCV1 **Continuing Calibration recovery is below lower control limit (C-).**
3+4-Methylphenol (55% @ 80-120%)

CYD0023-CCV1 **Calibration required quadratic regression (Q).**
Aniline (106% @ 80-120%)

CYD0033-CCV1 **Calibration required quadratic regression (Q).**
Aniline (106% @ 80-120%)

8270D(SIM) Polynuclear Aromatic Hydrocarbons

CYD0062-CCV1 **Continuing Calibration recovery is above upper control limit (C+).**
2-Methylnaphthalene (144% @ 70-130%)

Classical Chemistry

1503512-04 **Estimated value. Sample hold times were exceeded (H).**
Corrosivity (pH) , Eh (ORP)

1503512-07 **Estimated value. Sample hold times were exceeded (H).**
Corrosivity (pH) , Eh (ORP)

No other observations noted.

CURRENT SW-846 METHODOLOGY VERSIONS

Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015D - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH / VPH

Prep Methods

3005A - Aqueous ICP and Graphite Furnace Digestion
3020A - Aqueous ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035 - Solid Purge and Trap

MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **1503512-01 through 1503512-44**

Matrices: ( ) Ground Water/Surface Water (X) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

CAM Protocol (check all that apply below):

(X) 8260 VOC CAM II A	(X) 7470/7471 Hg CAM III B	( ) MassDEP VPH CAM IV A	( ) 8081 Pesticides CAM V B	(X) 7196 Hex Cr CAM VI B	( ) MassDEP APH CAM IX A
(X) 8270 SVOC CAM II B	(X) 7010 Metals CAM III C	(X) MassDEP EPH CAM IV B	( ) 8151 Herbicides CAM V C	( ) 8330 Explosives CAM VIII A	( ) TO-15 VOC CAM IX B
(X) 6010 Metals CAM III A	(X) 6020 Metals CAM III D	(X) 8082 PCB CAM V A	( ) 6860 Perchlorate CAM VIII B	( ) 9014 Total Cyanide/PAC CAM VI A	

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes ( ) No (X)
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	a. VPH, EPH, APH and TO-15 only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Notes and Definitions

Q	Calibration required quadratic regression (Q).
B+	Blank Spike recovery is above upper control limit (B+).
C-	Continuing Calibration recovery is below lower control limit (C-).
C+	Continuing Calibration recovery is above upper control limit (C+).
D	Diluted.
D+	Relative percent difference for duplicate is outside of criteria (D+).
H	Estimated value. Sample hold times were exceeded (H).
B-	Blank Spike recovery is below lower control limit (B-).
P	Percent difference between primary and confirmation results exceeds 40% (P).
Z-10a	Soil pH measured in water at 15.6 ºC.
SC	Surrogate recovery(ies) outside of criteria. Reextraction/Reanalysis confirms results (SC).
SD	Surrogate recovery(ies) diluted below the MRL (SD).
U	Analyte included in the analysis, but not detected
WL	Results obtained from a deionized water leach of the sample.
Z-08	See Attached
Z-10	Soil pH measured in water at 15.1 ºC.
I	Internal Standard(s) outside of criteria (I).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
[2C]	Result was taken from the second column. Dual column analysis.

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 15030512
Date Project Due: 4/3/15
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present?	* No	10. Are the samples properly preserved?	Yes
Air No.:		11. Proper sample containers used?	Yes
2. Were Custody Seals Present?	No	12. Any air bubbles in the VOA vials?	N/A
3. Were Custody Seals Intact?	N/A	13. Holding times exceeded?	No
4. Is Radiation count < 100 CPM?	Yes	14. Sufficient sample volumes?	Yes
5. Is a cooler present?	Yes	15. Any Subcontracting needed?	* Yes
Cooler Temp: **3.5**		16. Are ESS labels on correct containers?	**Yes|No**
Iced With: **Ice**		17. Were samples received intact?	**Yes|No**
6. Was COC included with samples?	Yes	ESS Sample IDs:	04, 07
7. Was COC signed and dated by client?	Yes	Sub Lab:	CTS
8. Does the COC match the sample	Yes	Analysis:	Grain Size / % water
9. Is COC complete and correct?	Yes	TAT:	5 DAY

18. Was there need to call project manager to discuss status? If yes, please explain.

RE: Wynn Everett Sediment Phase (01.0171521.13 Task 001)
ESS Laboratory Work Order Number: 1503556

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 1:19 pm, Apr 09, 2015

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

ESS Laboratory Work Order: 1503556

SAMPLE RECEIPT

The following samples were received on March 31, 2015 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Notes and Definitions

ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
[2C]	Result was taken from the second column. Dual column analysis.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

General Chemistry

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 200-27360-1

Laboratory: TestAmerica Burlington

Narrative

CASE NARRATIVE

Client: ESS Laboratory

Project: 1503556

Report Number: 200-27360-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 04/02/2015; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 5.2º C.

TOTAL ORGANIC CARBON

Samples 1503556-01, 1503556-02, 1503556-03, 1503556-04, 1503556-05, 1503556-06, 1503556-07, 1503556-08, 1503556-09, 1503556-10, 1503556-11, 1503556-12, 1503556-13, 1503556-14, and 1503556-15 were analyzed for total organic carbon in accordance with Lloyd Kahn Method. The samples were analyzed on 04/02/2015 and 04/03/2015.

Total Organic Carbon was detected in method blank MB 200-86491/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	Lab does not accept radioactive samples.
The cooler's custody seal, if present, is intact.	True	TAMPER EVIDENT TAPE
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	5.2ºC
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	IDs on containers do not match the COC. Logged in per COC.
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 15030556
Date Project Due: 4/7/15
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present?	* No	10. Are the samples properly preserved:	Yes
Air No.:		11. Proper sample containers used?	Yes
2. Were Custody Seals Present?	No	12. Any air bubbles in the VOA vials?	N/A
3. Were Custody Seals Intact?	N/A	13. Holding times exceeded?	No
4. Is Radiation count < 100 CPM?	Yes	14. Sufficient sample volumes?	Yes
5. Is a cooler present?	Yes	15. Any Subcontracting needed?	* Yes
Cooler Temp: **4.6**		16. Are ESS labels on correct containers?	**Yes|No**
Iced With: **Ice**		17. Were samples received intact?	**Yes|No**
6. Was COC included with samples?	Yes	ESS Sample IDs: 01-15	
7. Was COC signed and dated by client?	Yes	Sub Lab: Test America	
8. Does the COC match the sample	Yes	Analysis: TOC - LK	
9. Is COC complete and correct?	Yes	TAT: 5DAY	

18. Was there need to call project manager to discuss status? If yes, please explain.

No labels on jars, sample IDs on caps. TA 3/31/15

RE: Wynn Everett Sediment Phase (01.0171521.13 Task 001)
ESS Laboratory Work Order Number: 1503558

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 9:02 am, Apr 14, 2015

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

ESS Laboratory Work Order: 1503558

SAMPLE RECEIPT

The following samples were received on March 31, 2015 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Low Level VOA vials were frozen by <Client/ESS Laboratory> on <Date> at <time>.

Question I: Samples GZ-226 0.5ft-2ft, GZ-226 2ft-4ft, GZ-220 2ft-4ft, GZ-221 4ft-6ft, GZ-222 0.5ft-2ft, GZ-222 2ft-4ft and GZ-223 2ft-4ft (1503558-02, 1503558-03, 1503558-06, 1503558-08, 1503558-11, 1503558-12 and 1503558-14) for SVOA were analyzed for a subset of the required MCP list per the client's request.

Samples were decanted by ESS, per client request, upon receipt.

PROJECT NARRATIVE

5035/8260B Volatile Organic Compounds / Low Level

CD50146-BSD1 **Blank Spike recovery is above upper control limit (B+).**
Acetone (180% @ 70-130%), Bromomethane (134% @ 70-130%)

CD50146-BSD1 **Relative percent difference for duplicate is outside of criteria (D+).**
Acetone (61% @ 25%)

CD50239-BS1 **Blank Spike recovery is above upper control limit (B+).**
Bromomethane (175% @ 70-130%)

CD50239-BSD1 **Blank Spike recovery is above upper control limit (B+).**
Bromomethane (157% @ 70-130%)

CYD0007-CCV1 **Continuing Calibration recovery is above upper control limit (C+).**
1,2-Dibromo-3-Chloropropane (253% @ 70-130%), Bromomethane (152% @ 70-130%)

CYD0007-CCV1 **Continuing Calibration recovery is below lower control limit (C-).**
1,2-Dichloropropane (79% @ 80-120%)

CYD0025-CCV1 **Continuing Calibration recovery is above upper control limit (C+).**
Bromomethane (168% @ 70-130%)

8082A Polychlorinated Biphenyls (PCB)

1503558-32 **Percent difference between primary and confirmation results exceeds 40% (P).**
Aroclor 1248

1503558-35 **Lower value is used due to matrix interferences (LC).**
Aroclor 1248

1503558-35 **Percent difference between primary and confirmation results exceeds 40% (P).**
Aroclor 1248

1503558-36 **Lower value is used due to matrix interferences (LC).**
Aroclor 1248

1503558-36 **Percent difference between primary and confirmation results exceeds 40% (P).**
Aroclor 1248

1503558-38 **Surrogate recovery(ies) below lower control limit (S-).**
Tetrachloro-m-xylene [2C] (21% @ 30-150%)

8270D Semi-Volatile Organic Compounds

CD50739-BS1 **Blank Spike recovery is below lower control limit (B-).**
Aniline (39% @ 40-140%)

CD50739-BSD1 **Blank Spike recovery is below lower control limit (B-).**
Aniline (38% @ 40-140%)

CYD0041-CCV1 **Continuing Calibration recovery is above upper control limit (C+).**
Di-n-octylphthalate (123% @ 80-120%), p-Terphenyl-d14 (122% @ 80-120%), Pyrene (122% @ 80-120%)

8270D(SIM) Polynuclear Aromatic Hydrocarbons

CD50227-BS1 **Blank Spike recovery is below lower control limit (B-).**

Affirmative responses to questions A through F are required for Presumptive Certainty status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes ( ) No (X)
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	a. VPH, EPH, APH and TO-15 only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for Presumptive Certainty status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)? ***Data User Note:*** ***Data that achieve Presumptive Certainty status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.***	Yes (X) No ( )*
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

****All negative responses must be addressed in an attached laboratory narrative.***

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Notes and Definitions

Z-10a	Soil pH measured in water at 14.2 ºC.
Z-10	Soil pH measured in water at 13.8 ºC.
Z-08	See Attached
WL	Results obtained from a deionized water leach of the sample.
U	Analyte included in the analysis, but not detected
S-	Surrogate recovery(ies) below lower control limit (S-).
P	Percent difference between primary and confirmation results exceeds 40% (P).
LC	Lower value is used due to matrix interferences (LC).
H	Estimated value. Sample hold times were exceeded (H).
D+	Relative percent difference for duplicate is outside of criteria (D+).
D	Diluted.
C+	Continuing Calibration recovery is above upper control limit (C+).
C-	Continuing Calibration recovery is below lower control limit (C-).
B+	Blank Spike recovery is above upper control limit (B+).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
[2C]	Result was taken from the second column. Dual column analysis.

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 15030558
Date Project Due: 4/7/15
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present?	* No	10. Are the samples properly preserved?	Yes
Air No.:		11. Proper sample containers used?	Yes
2. Were Custody Seals Present?	No	12. Any air bubbles in the VOA vials?	N/A
3. Were Custody Seals Intact?	N/A	13. Holding times exceeded?	No
4. Is Radiation count < 100 CPM?	Yes	14. Sufficient sample volumes?	Yes
5. Is a cooler present?	Yes	15. Any Subcontracting needed?	* Yes
Cooler Temp: **4.6**		16. Are ESS labels on correct containers?	**Yes|No**
Iced With: **Ice**		17. Were samples received intact?	**Yes|No**
6. Was COC included with samples?	Yes	ESS Sample IDs: 09, 15	
7. Was COC signed and dated by client?	Yes	Sub Lab: CTS	
8. Does the COC match the sample	* No	Analysis: Grain Size / % Moisture	
9. Is COC complete and correct?	Yes	TAT: 5 DAY	

18. Was there need to call project manager to discuss status? If yes, please explain.
COC = GZ-226 2-4 Label = GZ-226 2-3.8 MR 3/31/15
Low Level Vials Jaye 3/31/15 MR 4/2/15

RE: Wynn Everett Sediment Phase (01.0171521.13 Task 001)
ESS Laboratory Work Order Number: 1503559

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 4:22 pm, Apr 13, 2015

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

ESS Laboratory Work Order: 1503559

SAMPLE RECEIPT

The following samples were received on March 31, 2015 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Low Level VOA vials were frozen by ESS Laboratory on March 31, 2015.

Question I: Samples GZ-214 6ft-8ft and GZ-215 4ft6-ft (1503559-06 and 1503559-17) for SVOA were analyzed for a subset of the required MCP list per the client's request.

Samples were decanted by ESS, upon receipt, per client request.

Affirmative responses to questions A through F are required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	Yes ( ) No (X)
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	Yes (X) No ( )
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	Yes (X) No ( )
D	Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ( )
E	a. VPH, EPH, APH and TO-15 only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	Yes (X) No ( )
	b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	Yes ( ) No ( )
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	Yes (X) No ( )

Responses to Questions G, H and I below are required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)?	Yes (X) No ( )*
	***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**	
H	Were **all** QC performance standards specified in the CAM protocol(s) achieved?	Yes ( ) No (X)*
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	Yes ( ) No (X)*

All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Notes and Definitions

Z-10	Soil pH measured in water at 14.3 ºC.
Z-08	See Attached
WL	Results obtained from a deionized water leach of the sample.
U	Analyte included in the analysis, but not detected
S-	Surrogate recovery(ies) below lower control limit (S-).
P	Percent difference between primary and confirmation results exceeds 40% (P).
LC	Lower value is used due to matrix interferences (LC).
H	Estimated value. Sample hold times were exceeded (H).
D+	Relative percent difference for duplicate is outside of criteria (D+).
D	Diluted.
C+	Continuing Calibration recovery is above upper control limit (C+).
B+	Blank Spike recovery is above upper control limit (B+).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
[2C]	Result was taken from the second column. Dual column analysis.

Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 15030559
Date Project Due: 4/7/15
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present?	* No	10. Are the samples properly preserved?	Yes
Air No.:		11. Proper sample containers used?	Yes
2. Were Custody Seals Present?	No	12. Any air bubbles in the VOA vials?	N/A
3. Were Custody Seals Intact?	N/A	13. Holding times exceeded?	No
4. Is Radiation count < 100 CPM?	Yes	14. Sufficient sample volumes?	Yes
5. Is a cooler present?	Yes	15. Any Subcontracting needed?	* Yes
Cooler Temp: **4.6**		16. Are ESS labels on correct containers?	**Yes|No**
Iced With: **Ice**		17. Were samples received intact?	**Yes|No**
6. Was COC included with samples?	Yes	ESS Sample IDs: 09	
7. Was COC signed and dated by client?	Yes	Sub Lab: CTS	
8. Does the COC match the sample	Yes	Analysis: Grain Size / % Water	
9. Is COC complete and correct?	Yes	TAT: 5DAY	

18. Was there need to call project manager to discuss status? If yes, please explain.
LOW Level vials frozen 3/31/15 mw EB 4/2/15 mw

RE: Wynn Everett Sediment Phase (01.0171521.13 Task 001)
ESS Laboratory Work Order Number: 1503590

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 1:57 pm, Apr 10, 2015

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: Wynn Everett Sediment Phase

ESS Laboratory Work Order: 1503590

SAMPLE RECEIPT

The following samples were received on March 31, 2015 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Revision 1 April 10, 2015: This report has been revised to include revised COC.

Notes and Definitions

ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
[2C]	Result was taken from the second column. Dual column analysis.

Qualifiers

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: ESS Laboratory

Project: 1503556

Report Number: 200-27360-2

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 04/02/2015; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 5.2 C.

TOTAL ORGANIC CARBON

Samples 1503590-01, 1503590-02 and 1503590-03 were analyzed for total organic carbon in accordance with Lloyd Kahn Method. The samples were analyzed on 04/03/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

RE: Wynn Everett Sediment Phase (01.0171521.13 Task 001)
ESS Laboratory Work Order Number: 1504045

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 3:11 pm, Apr 16, 2015

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: Wynn Everett Sediment Phase

ESS Laboratory Work Order: 1504045

SAMPLE RECEIPT

The following samples were received on April 09, 2015 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has performed and reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Data Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

For EPH soil samples, the aromatic range results have been corrected for identified cartridge contaminant in accordance with the CAM protocol.

Samples 1504045-01 and 1504045-02 were originally received on March 25, 2015 as ESS Laboratory Sample IDs 1503415-21 and 1503415-31. Sample 1504045-03 was originally received on March 26, 2015 as ESS Laboratory Sample ID 1503447-20. Samples 1504045-04, 1504045-05, 1504045-06 and 1504045-07 were originally received on March 26, 2015 as ESS Laboratory Sample IDs 1503448-15, 1503448-19, 1503448-22 and 1503448-28. Samples 1504045-08 and 1504045-09 were originally received on March 31, 2015 as ESS Laboratory Sample IDs 1503558-24 and 1503558-30. Sample 1504045-10 was originally received on March 27, 2015 as ESS Laboratory Sample ID 1503512-24.

Notes and Definitions

Z17	Temperature is within 23 +/-2 ºC.
U	Analyte included in the analysis, but not detected
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
[2C]	Result was taken from the second column. Dual column analysis.

Sample and Cooler Receipt Checklist

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 15040045
Date Project Due: 4/9/15
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present?	* No	10. Are the samples properly preserved?	Yes
Air No.:		11. Proper sample containers used?	Yes
2. Were Custody Seals Present?	No	12. Any air bubbles in the VOA vials?	N/A
3. Were Custody Seals Intact?	N/A	13. Holding times exceeded?	No
4. Is Radiation count < 100 CPM?	Yes	14. Sufficient sample volumes?	Yes
5. Is a cooler present?	Yes	15. Any Subcontracting needed?	No
Cooler Temp: **3.6**		16. Are ESS labels on correct containers?	Yes|No
Iced With: **Ice**		17. Were samples received intact?	Yes|No
6. Was COC included with samples?	Yes	ESS Sample IDs: _____	
7. Was COC signed and dated by client?	Yes	Sub Lab: _____	
8. Does the COC match the sample	Yes	Analysis: _____	
9. Is COC complete and correct?	Yes	TAT: _____	

18. Was there need to call project manager to discuss status? If yes, please explain.

Client: GZA GeoEnvironmental, Inc.
Client Project ID: _____
Shipped/Delivered Via: ESS Courier

ESS Project ID: 15040045
Date Project Due: 4/9/15
Days For Project: 5 Day

Items to be checked upon receipt:

1. Air Bill Manifest Present?	* No	10. Are the samples properly preserved?	Yes
Air No.:		11. Proper sample containers used?	Yes
2. Were Custody Seals Present?	No	12. Any air bubbles in the VOA vials?	N/A
3. Were Custody Seals Intact?	N/A	13. Holding times exceeded?	No
4. Is Radiation count < 100 CPM?	Yes	14. Sufficient sample volumes?	Yes
5. Is a cooler present?	Yes	15. Any Subcontracting needed?	No
Cooler Temp: **3.6**		16. Are ESS labels on correct containers?	**Yes** | **No**
Iced With: **Ice**		17. Were samples received intact?	(Yes) | **No**
6. Was COC included with samples?	Yes	ESS Sample IDs:	
7. Was COC signed and dated by client?	Yes	Sub Lab:	
8. Does the COC match the sample	Yes	Analysis:	
9. Is COC complete and correct?	Yes	TAT:	

18. Was there need to call project manager to discuss status? If yes, please explain.

28-DAY TOXICITY TESTS WITH THE AMPHIPOD, LEPTOCHEIRUS PLUMULOSUS, USING WHOLE-SEDIMENT SAMPLES COLLECTED ON AUGUST 6, 2013 FROM THE WYNN MA, LLC EVERETT STAGING YARD IN EVERETT, MA

October 16, 2013

INTRODUCTION

This report contains results of toxicity tests performed using grab samples of nine estuarine sediments collected on August 6, 2013 from the Wynn MA, LLC's staging yard in Everett, MA. Toxicity tests with the whole sediment samples were conducted by exposing the saltwater amphipod, *Leptocheirus plumulosus*, to each of the nine sediment samples for 28 days in a static-renewal test system. All toxicity test work reported here was performed at New England Bioassay (NEB) in Manchester, CT.

MATERIALS AND METHODS

Sample Collection and Handling

Grab samples of nine estuarine sediments for toxicity screening were collected on August 6, 2013 from the Wynn MA, LLC's staging yard in Everett, MA. The samples were picked up from the GZA office in Norwood, MA and delivered to NEB by NEB courier on August 22, 2013 at 1400 h; the whole sediment samples were then stored refrigerated in their original containers until test set-up. Copies of chain of custody documentation are found in Appendix B.

An Equal Opportunity Employer M/F/V/H

Upon receipt at NEB, the sediment samples (1-gallon HDPE plastic containers) were logged into the laboratory (Table 1). The sediment samples were then stored in the dark in a cold room (4° ± 2°C) until testing. Free-standing water found in the original sample containers was used to represent pore water; the pore water was collected and then analyzed for salinity and total ammonia (Attachment 1). Before testing, the nine sediment samples were removed from the cold room and then manually stirred in their original containers to ensure homogeneity.

TABLE 1. DESCRIPTION OF ESTUARINE WHOLE SEDIMENT SAMPLES COLLECTED FROM EVERETT, MA

Sample Description	Sample Date	Sample Type	NEB COC Nos.
	Whole Sediments		
GZ-104T	8/6/13	Grab	C33-3574
GZ-114T	8/6/13	Grab	C33-3575
GZ-116T	8/6/13	Grab	C33-3576
GZ-126T	8/6/13	Grab	C33-3577
GZ-135T	8/6/13	Grab	C33-3578
GZ-137T	8/6/13	Grab	C33-3579
GZ-LC1T	8/6/13	Grab	C33-3580
GZ-LC2T	8/6/13	Grab	C33-3581
GZ-LC3T	8/6/13	Grab	C33-3582

Observations on gross physical characteristics of sediment samples were then made. A description of each sample before test set-up can be found in Attachment 2.

In addition to testing site sediment samples, an artificial control sediment was evaluated as a quality-control check to determine adequacy of organisms and test system. The artificial control sediment was created based on EPA recommendations and consisted of natural sand and composted cow manure (Attachment 3). Control sediments were handled similarly to the site sediments.

After homogenization and characterization, between 2 cm and 5 cm of wet sediment was measured into 1L Pyrex glass beakers; a total of five beakers were prepared in this manner for each site sediment and the control sediment. Remaining sediment from each site was then stored in a cold room at 4° ± 2°.

Overlying water was added to each replicate beaker; gentle aeration of the overlying water was then initiated in all test and control beakers. After settling for about 4 h at the test temperature, aliquots of overlying water were removed from each sediment for total ammonia analysis; about 75% of the test solution was then removed and replaced with fresh overlying water. After test solution renewal, initial water quality measurements were performed; beakers containing the sediment and overlying water were then ready for introduction of test organisms.

Test Organisms

Leptocheirus plumulosus

Leptocheirus plumulosus, (Crustacea, Amphipoda) is an infaunal sediment-burrowing amphipod recommended as a test species for sediment tests (COE/EPA, 1994a, 1994b, 1995, 1998). This species is widely distributed in the estuarine and mesohaline portions of the Atlantic coast. Amphipods required for testing were obtained from an in-house culture. The amphipods were sorted by size through various sieves on August 27th to obtain the size needed for the sediment tests. The tests were initiated by loading 20 amphipods into each of the test and control beakers. A subsample of 40 amphipods was set aside for length measurements (Appendix A).

Test Water

Overlying water used in the whole-sediment toxicity tests was artificial saltwater (ASW) prepared using deionized water and Instant Ocean sea salts to a salinity of 20 ppt ± 2. The water preparation log can be found in Attachment 4.

Test Systems

L. plumulosus Whole-Sediment 28-Day Toxicity Tests

The amphipod toxicity test procedures are primarily based on recommendations in EPA/COE Inland Testing Manual (ITM) guidance documents (1994a; updated 1998); additional EPA guidance was also consulted (1994b, 2001). Immature amphipods were continuously exposed for 28 days under static-renewal conditions to sediment samples from each site. An artificial control sediment was evaluated similarly to the nine site sediments. Immature amphipods were exposed in groups of 20 animals in 1L Pyrex glass beakers containing 2-5 cm of sediment and filled with approximately 825 mls overlying laboratory-prepared saltwater, with five beakers per concentration (100 animals per sediment).

The test beakers for each sediment were placed in a controlled environmental chamber under the ITM specified test conditions (temperature 25° ± 2°C; photoperiod 16 h light and 8 h dark). After adding amphipods to the test chambers, the chambers were loosely covered to reduce evaporation.

All replicates received a change of the overlying water every Monday, Wednesday and Friday until test termination. Beakers were fed 2mls of crushed Tetramin flake three times a week after water renewal. To maintain adequate dissolved oxygen levels in the overlying water during testing, test and control beakers were continuously aerated (single bubble aeration) throughout the 28-day tests. At regular intervals, temperature, dissolved oxygen, pH, and salinity were measured in each sample and control (Appendix A). Samples of overlying water were taken on days 0 and 28 and sent to Phoenix Environmental Laboratories to monitor ammonia levels (Appendix B). Ammonia levels were also monitored on day 2 and day 14 in the lab using a salicylate-based color indicator to ensure they were not above the acceptable range (Attachment 1).

At test termination, the contents of each test chamber are sieved to isolate the test organisms. The mesh sizes for sieving the contents of the test chambers are 0.5 – 0.6 mm for adults and 0.25 mm for offspring. The sieved material from the large mesh sieve, which will include the adult amphipods, is rinsed into plexi-glass sorting trays and survival counts are performed. Amphipods and residual sediment retained on the 0.25mm sieve are rinsed into a labeled sample container using 70% isopropyl alcohol and a funnel supported by a ring stand. Approximately 3 ml of rose bengal solution is added to stain the organisms. If any young are observed while counting the adults in the sorting tray, the contents of the sorting tray are sieved again and added to the alcohol preserved container. The preserved young are counted within 2 weeks of test termination.

All live adult amphipods within a replicate were placed in pre-weighed drying pans and kept in a drying oven overnight (70°C). The following day, the weigh pans containing the dried amphipods were removed from the drying oven and placed in a desiccator. Amphipods were subsequently reweighed as a group using a 5-place balance. Total dry weight per replicate was then divided by number of amphipods weighed to obtain an average dry weight per surviving amphipod (Appendix A).

Reference Toxicant Test

An acute reference toxicant test (potassium chloride; KCl) was conducted with the same group of *L. plumulosus* collected for use in the sediment tests. The 96-h survival data were used to calculate an LC_{50} for *L. plumulosus*. The KCl test consisted of six nominal concentrations (125, 250, 500, 1000, 1500, and 2000 mg/L KCl) and a dilution-water control (ASW). The reference toxicant data can be found in Appendix B.

Statistical Analysis

Toxicity data from the amphipod tests were used to determine if the sediment samples exhibited significant effects on survival, growth and reproduction when compared with the test endpoints in laboratory control sediment (EPA, 1993, 1994c). Statistical analyses were run using the Comprehensive Environmental Toxicity Information System (CETIS v1.8.7.7), which uses an automated decision tree based on the EPA's flowchart for statistical analysis. Copies of data sheets and statistical summary printouts for the *L. plumulosus* toxicity tests are located in Appendix A.

RESULTS

Leptocheirus plumulosus 28-Day Toxicity Tests

Results of the *L. plumulosus* 28-day screening toxicity tests (test dates: August 28, 2013 – September 25, 2013) are summarized in Table 2. Survival of *L. plumulosus* in the NEB artificial control sediment was 91% after 28 days. Site sediment GZ-LC2T exhibited a statistically-significant reduction (Steel's many-one rank test; $P < 0.05$) in survival of *L. plumulosus* when compared with the survival in the artificial control. Survival in the eight remaining site sediments did not exhibit a statistically-significant reduction when compared with the artificial control. Survival in the site sediment samples ranged from 0% to 94% after a 28-day exposure.

Average weight of the *L.plumulosus* was 1.395 mg after 28 days in the artificial control. When the average weight of the nine site sediments was compared with the artificial control, a statistically-significant reduction was found in samples GZ-104T, GZ-114T, GZ-126T, GZ-137T, GZ-LC2T and GZ-LC3T (Dunnett Multiple Comparison Test; $P < 0.05$). There was no statistically-significant reduction in weight between the site samples GZ-116T, GZ-135T and GZ-LC1T when compared with the artificial control. Average weight in the site sediment samples ranged from 0 mg to 0.899 mg after a 28-day exposure.

Amphipods exposed to the artificial control sediment increased in dry weight by approximately 17.7-fold during the 28-day exposure. For the nine site sediments, dry weight increases over initial dry weights ranged from 4.1-fold for sample GZ-104T to 11.3-fold for GZ-LC1T.

There was a statistically-significant reduction in all of the site sediment samples for reproduction when compared against the artificial control, which had 382 young. However, the observations made on total number of offspring seem to correlate closely with the mean weights at 28-days. The three site sediment samples that did not have a statistically-significant reduction in weight compared with the artificial control, GZ-116T, GZ-135T and GZ-LC1T, also had the highest number of young at test termination; 115, 150 and 148, respectively. These three samples each had an average weight of $\geq$ 0.875mg. The remaining six site sediment samples, which were all found to have average weights that were significantly reduced from the control, had a noticeably smaller amount of young (Table 2).

Test Summary	**5.1-8.2**	**24.1-25.7**	**7.6-8.6**	**20-22**

Reference Toxicant Testing

The SDS 96-h LC_{50} was estimated for *L. plumulosus* using survival data generated from an acute reference toxicant test with the same cohort of amphipods used in sediment testing (test dates: 8/28/13 – 9/1/13). The 96-h LC_{50} for *L. plumulosus* was estimated at 12.074 mg/L SDS (Spearman method; confidence limits of 10.349 to 14.087 mg/L SDS). Survival of control amphipods was 100% at test completion (96 h).

SUMMARY

The least toxic samples appear to be GZ-116T, GZ-135T and GZ-LC1T. These three samples had the highest survival rate (≥ 83%), the highest average weights (≥ 0.875 mg) and the highest number of offspring (≥ 115). They did not exhibit any statistically-significant survival or weight reductions when compared with the control. The most toxic sample was GZ-LC2T, which had 0% survival at 28 days and produced no offspring. The remaining five site samples (GZ-104T, GZ-114T, GZ-126T, GZ-137T and GZ-LC3T) showed moderate toxicity. Their survival at 28-days was not significantly reduced when compared with the control, however their average weight at 28-days was significantly lower. They also produced lower amounts of offspring (≤ 55). A description of the overall test observations made by the technicians can be found in Attachment 5.

CERTIFICATION

I certify that the toxicity test data presented in this report were obtained under my direction or supervision in accordance with protocols of the U.S. Environmental Protection Agency, where applicable. The information is, to the best of my knowledge and belief, true, accurate, and complete.

* Free-standing water found in the original sample containers was used to represent "pore water."

Overlying Test Water Ammonia:

In order to determine the ammonia levels within the overlying water of each sediment test, samples of overlying water were collected on days 0 and 28, and sent to Phoenix Environmental Laboratories, Inc., in Manchester, CT.

Additional ammonia measurements were conducted at NEB using a salicylate-based color indicator. This was done to insure that the ammonia levels within the test chambers were not above the acceptable range. Otherwise, water changes would have been performed to reduce these ammonia levels (not found to be necessary in this case). See below:

ATTACHMENT 2

Descriptions of Sediment Samples

(At time of test pre-set)

Client: GZA GeoEnvironmental, Inc. Pre-set date: 8-27-13

Project: Everett, MA (01.171521.02 Task 6) Start date: 8-28-13

GZ-104 T / C33-3574: Black in color; smooth texture, fine-grained, with small stones and small snail shells; strong odor of petroleum.

GZ-114 T / C33-3575: Black in color; smooth texture, fine-grained, "pudding-like" consistency; shells of mussels and shells of oysters; faint odor of petroleum.

GZ-116 T / C33-3576: Black in color; sticky, but gritty, with small stones and clam shell fragments; faint odor of petroleum.

GZ-126 T / C33-3577: Dark gray in color; sticky, but gritty, with clam shell fragments; only natural odor detected.

GZ-135 T / C33-3578: Grayish black in color; sticky, heavy clay with sand, less fluid than the other samples; a razor clam shell was observed; only natural odor detected.

GZ-137 T / C33-3579: Black in color; smooth texture, fine grained, sticky; small clam shells observed; odor of petroleum noticeable.

GZ-LC 1 T / C33-3580: Dark gray in color; smooth, sticky and clay-like, with clam shells; small, live worms seen; faint odor of petroleum.

GZ-LC 2 T / C33-3581: Gray in color (lighter than the other samples); "fluffy" consistency, not dense or heavy; a few rocks were present, as well as shells of slipper-shell mollusks; strong odor of petroleum.

GZ-LC 3 T / C33-3582: Black in color; smooth, slippery texture, fine-grained, with a few small stones or shell fragments; odor of petroleum noticeable.

Date prepared: **8-27-13**

Test pre-set date: **8-27-13**

Test setup date: **8-28-13**

Ingredients: Natural sand, sterilized natural marine sediment, and redart clay.
Artificial salt water (Instant Ocean™) used to increase pore water salinity.

Natural fine-grain sand was collected from a clean site in Huntington, MA. Portions of sand were rinsed through a 300 micron mesh. Sand grains small enough to pass through the mesh were further rinsed. The rinsed sand was stirred into artificial salt water, to provide the final product with increased pore-water salinity. The sand was allowed to settle, and the excess salt water was decanted.

Natural marine sediment was collected (7-30-13) from the Barn Island Wildlife Management Area in Stonington, CT. A portion of this sediment was sieved, then sterilized by microwaves in order to remove and/or destroy indigenous organisms. The sterilized sediment was allowed to cool.

Redart clay was obtained from Sheffield Pottery, Inc., in Sheffield, MA.

All ingredients were thoroughly blended together, and re-homogenized before use.

Amounts added:

Natural sand, ≤ 300 µm:	**660 ml**	(55% by volume)
Sterilized natural marine sediment:	**480**	(40% by volume)
Redart clay:	**60**	(5% by volume)

ATTACHMENT 5

Marine Sediment - Overall Test Observations

Client: GZA GeoEnvironmental, Inc. Start date: 8-28-13

Project: Everett, MA (01.171521.02 Task 6) End date: 9-25-13

At test initiation (Day 0), test organisms were added to all replicate beakers. For all samples (and the control sediment), the amphipods quickly swam downward through the overlying water, and entered the sediment almost immediately.

One day after test initiation, small tunnel entrances (holes) were clearly visible on the surface of the control sediment, and short tunnels (burrows) could be seen against the glass on the side of the beakers, near the bottom. All but one of the test samples exhibited this type of burrowing by Day 1. These burrows remained visible throughout the duration of the test, slowly becoming longer and more branched.

For sample sediment **GZ-LC 2 T,** no burrows or tunnel entrances were ever observed. In fact, the organisms disappeared on day zero, and were never seen again. There was absolutely no indication of life or activity in the beakers containing sample GZ-LC 2 T throughout the test period. This is in stark contrast with all other samples, (and the control sediment), where borrows were obvious, and organisms could occasionally be seen roaming the surface of the sediment (an activity that increased as the organisms became mature).

All tests were fed on a normal schedule, after a 40% water change occurring on Mondays, Wednesdays, and Fridays. Salinity increases (due to evaporation) were controlled thru these water changes.

No indigenous organisms were observed during the test period.

At test breakdown:

Visual observation of recovered test organisms:

The surviving test amphipods recovered from the **control sediment** (on day 28) appeared healthy, and relatively consistent in size. They also appeared larger than some of those that were recovered from the various sample sediments.

The following size descriptions were made visually, and should not be considered to be as reliable or precise as the (more objective) dry-weight data:

Artificial control: organisms larger, generally consistent in size.

GZ-104 T: Mixed sizes, some organisms larger, others small and weak-looking. The largest organisms were found in replicate **D** (survival = 17), while the smallest organisms were found in replicate **A** (survival = 1) and in replicate **E** (survival = 6).

GZ-114 T: Most organisms were smaller than the control organisms, but to varying degrees. Those that appeared the most similar in size to the control organisms were found in the replicate having the highest survival (replicate **C**, survival = 18); however, smaller organisms were found in replicate **D**, were the survival was nearly as high (replicate **D,** survival = 17).

GZ-116 T: Organisms appeared only somewhat smaller than those found in the control sediment.

GZ-126 T: Organisms appeared noticeably smaller than those found in the control sediment.

Marine Sediment - Overall Test Observations (Page 2)

Client: GZA GeoEnvironmental, Inc. Start date: 8-28-13

Project: Everett, MA (01.171521.02 Task 6) End date: 9-25-13

GZ-135 T: Organisms in replicate **E** appeared smaller than those in the other replicates (survival was high in all replicates).

GZ-137 T: Organisms in replicate **C** appeared larger than those in the other replicates (survival in replicate **C** = 19). The organisms appeared smaller in all other replicates (besides replicate **C**); however, survival was equally as high in replicate **D** (survival = 19). So, the size difference did not appear to correspond with any particular difference in survival.

GZ-LC 1 T: Organisms appeared bigger in replicates **C**, **D**, and **E**, but were moderately smaller in replicates **A** and **B**. (Survival was generally high, except in replicate **B**, where survival = 6.)

GZ-LC 2 T: Absolutely no organisms were ever seen in sample **GZ-LC 2 T** after they were added on Day 0.

GZ-LC 3 T: The organisms recovered from replicate **A** were larger, while those found in the other replicates appeared smaller.

Additional Observations:

One live sand worm (2-3 inches long) was found in replicate **B** of sediment **GZ-116 T**. Another live sand worm (appx. 1.5 inches) was found in replicate **D** of sediment **GZ-126 T**.

A **very strong, undefined, chemical odor** was given off by the process of seiving sediment **GZ-LC 2 T** at test breakdown.

Initial Length and Weight Data - *Leptocheirus plumulosus*

Client: GZA GeoEnvironmental, Inc.

CHAIN OF CUSTODY DOCUMENTS

PHOENIX
Environmental Laboratories, Inc

Tuesday, September 10, 2013

Attn: Ms. Kim Wills
New England Bioassay
a Division of GZA GeoEnvironmental
77 Batson Drive
Manchester, CT 06040

Project ID: GZA EVERETT
Sample ID#s: BF34874 - BF34884

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

Phyllis Shiller

Phyllis Shiller
Laboratory Director

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

Phyllis Shiller

SUMMARY

Client:	GZA GeoEnvironmental, Inc.
Site:	Wynn Casino Site in Everett, MA
GZA Job Number:	01.171521.13 Task 1
Test Materials:	Whole Sediment Samples (Estuarine)
Sample Date:	March 24-30, 2015 (12 Whole Sediment Samples)
Delivery Date:	April 21, 2015
Test Type:	28-day Single Concentration Survival & Growth Toxicity Tests with the Amphipod, *Leptocheirus plumulosus*
Test Endpoint:	28-day survival, growth & reproduction
Test Dates:	April 30, 2015 – May 28, 2015

28-DAY TOXICITY TESTS WITH THE AMPHIPOD, LEPTOCHEIRUS PLUMULOSUS, USING WHOLE-SEDIMENT SAMPLES COLLECTED MARCH 24-30, 2015 FROM THE WYNN MA, LLC EVERETT STAGING YARD IN EVERETT, MA

June 16, 2015

INTRODUCTION

This report contains the results of toxicity tests performed using grab samples of twelve estuarine sediments collected between March 24th and March 30th, 2015 from the Wynn Casino site in Everett, MA. Toxicity tests with the whole sediment samples were conducted by exposing the saltwater amphipod, *Leptocheirus plumulosus*, to each of the twelve sediment samples for 28 days in a static-renewal test system. All toxicity test work reported here was performed at New England Bioassay (NEB) in Manchester, CT.

MATERIALS AND METHODS

Sample Collection and Handling

Grab samples of twelve estuarine sediments for toxicity screening were collected March 24-30, 2015 from the Wynn Casino site in Everett, MA. The samples were picked up from the GZA office in Norwood, MA and delivered to NEB by NEB courier on April 21, 2015 at 1220 h; the whole sediment samples were then stored refrigerated in their original containers until test set-up. Copies of chain of custody documentation are found in Appendix B.

Upon receipt at NEB, the sediment samples (1-gallon HDPE plastic containers) were logged into the laboratory (Table 1). The sediment samples were then stored in the dark in a cold room (4° ± 2°C) until testing. Free-standing water found in the original sample containers was used to represent pore water; the pore water was collected and then analyzed for salinity and total ammonia (Appendix A). Before testing, the twelve sediment samples were removed from the cold room and then manually stirred in their original containers to ensure homogeneity.

TABLE 1. DESCRIPTION OF ESTUARINE WHOLE SEDIMENT SAMPLES COLLECTED FROM EVERETT, MA

Sample Description	Sample Date	Sample Type	NEB COC Nos.
	Whole Sediments

GZ-209	3/25/15	Grab	C33-1878
GZ-213	3/25/15	Grab	C33-1879
GZ-214	3/30/15	Grab	C33-1880
GZ-217	3/24/15	Grab	C33-1881
GZ-223	3/30/15	Grab	C33-1882
GZ-224	3/30/15	Grab	C33-1883
GZ-225	3/27/15	Grab	C33-1884

Observations on gross physical characteristics of sediment samples were then made. A description of each sample before test set-up can be found in Appendix A.

In addition to testing site sediment samples, an artificial control sediment and a natural control sediment were evaluated as quality-control checks to determine adequacy of organisms and test system. The artificial control sediment was created based on EPA recommendations and consisted of natural sand, sterilized natural marine sediment and redart clay (Appendix A). Control sediments were handled similarly to the site sediments. Performance criteria established for this test includes the average survival of amphipods in the control treatment must be greater than or equal to 80% and there must be measurable growth and reproduction in all replicates. Both the artificial and natural controls did have measurable growth and reproduction in all replicates, however neither had 80% survival at test termination. The artificial control survival was 62% and the natural control survival was 71%. According to "Method for Assessing the Chronic Toxicity of Marine and Estuarine Sediment-associated Contaminants with the Amphipod *Leptocheirus plumulosus*" EPA600/R-01/020 "*Test failures usually can be attributed to a failure to maintain one or more test requirements described in Tables 11.1 and 11.3; however, tests sometimes fail inexplicably.*" Salinity, pH, sediment grain size, ammonia and temperature conditions as recommended in the aforementioned tables were consistently met in both the artificial and natural controls. Additionally, the *L.plumulosus* reference toxicant tests set in April and May, 2015 were both within the acceptable range. We are considering this test to be conditionally valid because three reference site sediments were also

included, and all three reference sites passed the survival, growth and reproduction performance criteria for test controls. These reference sites can provide a site-specific basis for evaluating toxicity.

After homogenization and characterization, between 2 cm and 5 cm of wet sediment was measured into 1L Pyrex glass beakers; a total of five beakers were prepared in this manner for each site sediment and the control sediment. Remaining sediment from each site was then stored in a cold room at 4° ± 2°.

Overlying water was added to each replicate beaker; gentle aeration of the overlying water was then initiated in all test and control beakers. After settling for about 4 h at the test temperature, aliquots of overlying water were removed from each sediment for total ammonia analysis; about 75% of the test solution was then removed and replaced with fresh overlying water. After test solution renewal, initial water quality measurements were performed; beakers containing the sediment and overlying water were then ready for introduction of test organisms.

Test Organisms

Leptocheirus plumulosus

Leptocheirus plumulosus, (Crustacea, Amphipoda) is an infaunal sediment-burrowing amphipod recommended as a test species for sediment tests (COE/EPA, 1994a, 1994b, 1995, 1998). This species is widely distributed in the estuarine and mesohaline portions of the Atlantic coast. Amphipods required for testing were obtained from in-house cultures. The amphipods were sorted by size on April 30th to obtain the appropriate age/size needed for the sediment tests. The tests were initiated by loading 20 amphipods into each of the test and control beakers. A subsample of 40 amphipods was set aside for length measurements (Appendix A).

Test Water

Overlying water used in the whole-sediment toxicity tests was artificial saltwater (ASW) prepared using deionized water and Instant Ocean sea salts to a salinity of 20 ppt ± 2. The water preparation log can be found in Attachment 4.

Test Systems

L. plumulosus Whole-Sediment 28-Day Toxicity Tests

The amphipod toxicity test procedures are primarily based on recommendations in EPA/COE Inland Testing Manual (ITM) guidance documents (1994a; updated 1998); additional EPA guidance was also consulted (1994b, 2001). Immature amphipods were continuously exposed for 28 days under static-renewal conditions to sediment samples from each site. An artificial control sediment was evaluated similarly to the twelve site sediments. Immature amphipods were exposed in groups of 20 animals in 1L Pyrex glass beakers containing 2-5 cm of sediment and filled with approximately 825 mls overlying laboratory-prepared saltwater, with five beakers per concentration (100 animals per sediment).

The test beakers for each sediment were placed in an environmentally controlled room under the ITM specified test conditions (temperature 25° ± 2°C; photoperiod 16 h light and 8 h dark). After adding amphipods to the test chambers, the chambers were covered with a plastic board to reduce evaporation. The board contained an aeration apparatus and small holes for venting.

All replicates received a change of the overlying water every Monday, Wednesday and Friday until test termination. Beakers were fed 2mls of crushed Tetramin flake three times a week after water renewal. To maintain adequate dissolved oxygen levels in the overlying water during testing, test and control beakers were continuously aerated (single bubble aeration) throughout the 28-day tests. At regular intervals, temperature, dissolved oxygen, pH, and salinity were measured in each sample and control (Appendix B). Samples of overlying water were taken on days 0 and 28 and sent to Phoenix Environmental Laboratories to monitor ammonia levels (Appendix C). Ammonia levels were also monitored on day 2 to ensure they were not above the acceptable range (Appendix A).

At test termination, the contents of each test chamber are sieved to isolate the test organisms. The mesh sizes for sieving the contents of the test chambers are 0.5 – 0.6 mm for adults and 0.25 mm for offspring. The sieved material from the large mesh sieve, which will include the adult amphipods, is rinsed into plexi-glass sorting trays and survival counts are performed. Amphipods and residual sediment retained on the 0.25mm sieve are rinsed into a labeled sample container using 91% isopropyl alcohol and a funnel supported by a ring stand. Approximately 3 ml of rose bengal solution is added to stain the organisms. If any young are observed while counting the adults in the sorting tray, the contents of the sorting tray are sieved again and added to the alcohol preserved container. The preserved young are counted within 2 weeks of test termination.

All live adult amphipods within a replicate were placed in pre-weighed drying pans and kept in a drying oven (100°C) for a minimum of six hours. After six hours, the weigh pans containing the dried amphipods were removed from the drying oven and placed in a desiccator. Amphipods were subsequently reweighed as a group using a 5-place balance. Total dry weight per replicate was then divided by number of amphipods loaded at test initiation (20 per replicate) to obtain an average biomass.

Reference Toxicant Test

An acute reference toxicant test (potassium chloride; KCl) was conducted with the same group of *L. plumulosus* collected for use in the sediment tests. The 96-h survival data were used to calculate an LC_{50} for *L. plumulosus*. The KCl test consisted of six nominal concentrations (125, 250, 500, 1000, 1500, and 2000 mg/L KCl) and a dilution-water control (ASW). The reference toxicant data can be found in Appendix C.

Statistical Analysis

Toxicity data from the amphipod tests were used to determine if the sediment samples exhibited significant effects on survival, growth and reproduction when compared with the test endpoints in laboratory control sediment (EPA, 1993, 1994c). Statistical analyses were run using the Comprehensive Environmental Toxicity Information System (CETIS v1.8.8.0), which uses an automated decision tree based on the EPA's flowchart for statistical analysis. Survival was calculated by the ratio of the number of living adults at test termination out of the initial organism count of 20 at test initiation. Biomass was calculated as the average growth in mg per site divided by the initial organism count of 20 at test initiation. Reproduction was calculated by taking the number of neonates per surviving adult in each replicate, then averaging that across all 5 replicates. Copies of data sheets and statistical summary printouts for the *L. plumulosus* toxicity tests are located in Appendix B.

RESULTS

Leptocheirus plumulosus 28-Day Toxicity Tests

Results of the *L. plumulosus* 28-day screening toxicity tests (test dates: April 30, 2015 – May 28, 2015) are summarized in Tables 2-6. Survival, biomass and reproduction in the site sediment samples GZ-203, GZ-207, GZ-209, GZ-213, GZ-214, GZ-217, GZ-223, GZ-224, GZ-225 were compared with three reference sites LC-102, LC-105, LC-112 and with the laboratory artificial and natural controls.

Survival and biomass of the *L.plumulosus* in the NEB artificial control sediment was 62% and 0.8779 mg, respectively, after 28 days. None of the site or reference sediments exhibited a statically significant decrease in survival or biomass when compared with the artificial control. Average number of young per surviving adult was 1.73, site sediments GZ-213, GZ-217 and GZ-224 had statistically reduced number of young when compared to the artificial control.

Survival of the *L.plumulosus* in the NEB natural control sediment was 71% after 28 days. None of the site or reference sediments exhibited a statistically significant decrease in survival when compared with the natural control. Average biomass was 1.035 mg in the natural control, GZ-217 with a biomass of 0.538, exhibited a significant decrease in biomass compared to the natural control. Average reproduction was 1.352 in the natural control, GZ-217 with reproduction of 0.1511 and GZ-224 with reproduction of 0.1184, exhibited significant decreases in reproduction compared to the natural control.

Survival of the reference site LC-102 was 83% after 28 days. GZ-217, with a survival of 57%, was significantly lower than LC-102. Average biomass was 1.586 mg in LC-102. GZ-217 with a biomass of 0.538, GZ-224 with a biomass of 0.9412 and GZ-225 with a biomass of 1.021 showed a significate reduction compared with LC-102. Average reproduction was 2.366 in LC-102. GZ-213 with reproduction of 0.3294, GZ-214 with reproduction of 0.8542, GZ-217 with reproduction of 0.1511 and GZ-224 with reproduction of 0.1184 showed a significant decrease when compared with LC-102.

Survival of the reference site LC-105 was 87% after 28 days. GZ-217, with a survival of 57%, was significantly lower than LC-105. Average biomass was 1.772 mg in LC-105. LC-112 with a biomass of 1.42, GZ-207 with a biomass of 1.272, GZ-213 with a biomass of 1.167, GZ-217 with a biomass of 0.538, GZ-224 with a biomass of 0.9412 and GZ-225 with a biomass of 1.021 showed a significant reduction in biomass when compared with LC-105. Average reproduction was 1.519 young per surviving adult in LC-105. GZ-217 with reproduction of 0.1511 and GZ-224 with reproduction of 0.1184 showed a significant decrease when compared with LC-105.

Survival of the reference site LC-112 was 85% after 28 days. GZ-217, with a survival of 57%, was significantly lower than LC-112. Average biomass was 1.42 mg in LC-112. GZ-217 with a biomass of 0.538 and GZ-224 with a biomass of 0.9412 showed a significant reduction in biomass when compared with LC-112. Average reproduction was 2.081 young per surviving adult in LC-112. GZ-213 with reproduction of 0.3294, GZ-217 with reproduction of 0.1511 and GZ-224 with reproduction of 0.1184 showed a significant decrease when compared with LC-112.

Amphipods exposed to the artificial and natural control sediment increased in biomass by approximately 13.1-fold and 15.4-fold, respectively, during the 28-day exposure. For the twelve site sediments, biomass increases over initial biomass ranged from 8.03-fold for sample GZ-217 to 26.4-fold for LC-105. Fold change for each sample can be found in Table 7.

Reference Toxicant Testing

The SDS 96-h LC_{50} was estimated for *L. plumulosus* using survival data generated from an acute reference toxicant test with the same cohort of amphipods used in sediment testing (test dates: 4/23/15 – 4/27/15). The 96-h LC_{50} for *L. plumulosus* was estimated at 17.08 mg/L SDS (Spearman method; confidence limits of 15.96 to 18.27 mg/L SDS). Survival of control amphipods was 100% at test completion (96 h). A reference toxicant chart can be found in Appendix C.

CONCLUSION

All three reference sites collected showed a similar performance with survival ranging from 83-87%, biomass ranging from 1.42-1.772 and reproduction ranging from 1.519-2.366. The consistency of the results produced by these three sites gives a good indication of the performance of ambient/naturally occurring sediment located specifically in the geographic area the site samples were taken in Everett, MA. Using these reference sites as a baseline for comparison, site sample GZ-217 showed the most toxicity. GZ-217 showed statistically significant reductions in survival, biomass and reproduction when compared with all three reference sites. GZ-217 was the only site sample that showed a statistically significant reduction in survival when compared with the reference sites. GZ-224 also exhibited toxicity in the sublethal endpoints, having statistically significant reductions in biomass and reproduction when compared with all three reference sites. GZ-207, GZ-213, GZ-214 and GZ-225 showed some moderate toxicity in biomass and reproduction against various reference sites. GZ-203, GZ-209 and GZ-223 were the only three site sediments that showed no reductions in survival, biomass or reproduction when compared with the three site sediments.

CERTIFICATION

I certify that the toxicity test data presented in this report were obtained under my direction or supervision in accordance with protocols of the U.S. Environmental Protection Agency, where applicable. The information is, to the best of my knowledge and belief, true, accurate, and complete.

Sediment Sample Descriptions and Test Observations

Client: GZA GeoEnvironmental, Inc.

Project: Wynn Casino Site, Everett, MA

Test start date: 4-30-15

LC-102 / C35-1873

At pre-set:
Wet, with standing water at the top of the sample container. Black in color. Fine-grained with a soupy, lose consistency. Leaves present.

Test Observations:
At test initiation, the test organisms behaved normally, entering the sediment and creating small holes visible on the surface. As the test period proceeded, it became more common to see organisms roaming on the surface. The test organisms also appeared to grow, becoming visibly larger than they were at test initiation.

LC-105 / C35-1874

At pre-set:
Wet, with standing water at the top of the sample container. Black in color. Fine-grained with a soupy, lose consistency.

Test Observations:
At test initiation, the test organisms behaved normally, entering the sediment and creating small holes visible on the surface. As the test period proceeded, it became more common to see organisms roaming on the surface. The test organisms also appeared to grow, becoming visibly larger than they were at test initiation.

LC-112 / C35-1875

At pre-set:
Small amount of standing water at the top of the sample container. Dark brown in color. Fine-grained, with clam and mussel shells. Faint odor of petroleum.

Test Observations:
At test initiation, the test organisms behaved normally, entering the sediment and creating small holes visible on the surface. As the test period proceeded, it became more common to see organisms roaming on the surface. The test organisms also appeared to grow, becoming visibly larger than they were at test initiation.

GZ-203 / C35-1876

At pre-set:
Wet, with standing water at the top of the sample container. Black in color. Fine-grained with a soupy, lose consistency. Clam shells present. Faint odor of petroleum.

Test Observations:
At test initiation, the test organisms behaved normally, entering the sediment and creating small holes visible on the surface. As the test period proceeded, it became more common to see organisms roaming on the surface. The test organisms also appeared to grow, becoming visibly larger than they were at test initiation.

GZ-207 / C35-1877

At pre-set:
Wet, with standing water at the top of the sample container. Black in color. Fine-grained with a soupy, but thick consistency. Leaves, razor clam shells and mussel shells present.

Test Observations:
At test initiation, the test organisms behaved normally, entering the sediment and creating small holes visible on the surface. As the test period proceeded, it became more common to see organisms roaming on the surface. The test organisms also appeared to grow, becoming visibly larger than they were at test initiation.

GZ-209 / C35-1878

At pre-set:
Wet, with standing water at the top of the sample container. Black in color. Fine-grained with a soupy, lose consistency. Clam and mussel shells present. Faint odor of petroleum.

Test Observations:
At test initiation, the test organisms behaved normally, entering the sediment and creating small holes visible on the surface. As the test period proceeded, it became more common to see organisms roaming on the surface. The test organisms also appeared to grow, becoming visibly larger than they were at test initiation.

GZ-213 / C35-1879

At pre-set:
Wet, with standing water at the top of the sample container. Very dark gray color. Gritty, but with noticeable chunks of clay. Mussel shells present. Faint odor of petroleum.

Test Observations:
At test initiation, the test organisms behaved normally, entering the sediment and creating small holes visible on the surface. As the test period proceeded, it became more common to see organisms roaming on the surface. The test organisms also appeared to grow, becoming visibly larger than they were at test initiation.

GZ-214 / C35-1880

At pre-set:
Wet, with standing water at the top of the sample container. Dark brown, almost black in color. Fine-grained, but also with sand/grit. One small, intact clam seen. Fishy odor.

Test Observations:
At test initiation, the test organisms behaved normally, entering the sediment and creating small holes visible on the surface. As the test period proceeded, it became more common to see organisms roaming on the surface. The test organisms also appeared to grow, becoming visibly larger than they were at test initiation.

GZ-217 / C35-1881

At pre-set:
Very thick, not as wet looking, with only a slight amount of standing water at the top of the sample container. Gray in color. Odor of petroleum. Fine grained, like clay, but also somewhat gritty.

Test Observations:
This particular sample appeared noticeably different from all others. At test initiation, several test organisms were seen swimming around in the water column, even after 24 hours. Not all test organisms entered the sediment immediately. (For all other samples and control sediments, the test organisms did enter the sediment immediately.) Eventually, the test organisms were no longer as visible, apparently entering the sediment (as shown by the appearance of small holes on the surface). The holes created by the organisms appeared smaller than the holes seen in the other samples and controls. Molted exoskeletons were less frequently observed in the test chambers for this sample.

GZ-223 / C35-1882

At pre-set:
Wet, with standing water at the top of the sample container. Black in color. Fine-grained with a soupy, lose consistency. Snail shells and other shells present. Faint odor of petroleum.

Test Observations:
At test initiation, the test organisms behaved normally, entering the sediment and creating small holes visible on the surface. One large, live, snail was removed from replicate C. A tube-like marine organism was seen in replicate B, although it did not survive until the end of the test period. This organisms was not identified, but was brown/orange in color, sessile, oriented vertically, and somewhat similar in appearance to an anemone. It was approximately 1 cm tall.

GZ-224 / C35-1883

At pre-set:
Wet, with standing water at the top of the sample container. Dark, blackish brown in color. Fine-grained with a soupy, lose consistency. Shell fragments present. Odor of petroleum present.

Test Observations:
At test initiation, the test organisms behaved normally, entering the sediment and creating small holes visible on the surface. At test initiation, the test organisms behaved normally, entering the sediment and creating small holes visible on the surface. As the test period proceeded, it became more common to see organisms roaming on the surface. The test organisms also appeared to grow, becoming visibly larger than they were at test initiation.

GZ-225 / C35-1884

At pre-set:
Wet, with standing water at the top of the sample container. Black in color. Sandy/gritty in consistency, with many small stones, shells, and shell fragments. Odor of petroleum present.

Test Observations:
At test initiation, the test organisms behaved normally, entering the sediment and creating small holes visible on the surface. At test initiation, the test organisms behaved normally, entering the sediment and creating small holes visible on the surface. As the test period proceeded, it became more common to see organisms roaming on the surface. The test organisms also appeared to grow, becoming visibly larger than they were at test initiation.

In Replicate A, a noticeable network of tunnels appeared against the glass within the sediment. These tunnels appeared much more developed than the less-noticeable tubes normally built by the test organisms. At test breakdown, a large, live, marine sand worm (4 – 8 cm, depending on its elongation) was found in this test replicate.

Preparation of Artificial Control Sediment

(Saltwater version for *Leptocheirus plumulosus*)

Client: GZA GeoEnvironmental, Inc.

Project: Wynn, Everett
01.0171521.13 Task 1

Date prepared: 4-29-15

Test pre-set date: 4-29-15

Test setup date: 4-30-15

Ingredients: Natural sand, sterilized natural marine sediment, and redart clay.
Artificial salt water (Instant Ocean™) used to increase pore water salinity.

Clean fine-grain sand was collected from a natural deposit in Salem, CT. Portions of this sand were rinsed through a 300 micron mesh. Also, separate portions were rinsed through a 75 micron mesh. Sand grains small enough to pass through each mesh were placed in separate containers and further rinsed. The rinsed sand was stirred into artificial salt water, to provide the final product with increased pore-water salinity. The sand was allowed to settle, and the excess salt water was decanted.

Natural marine sediment was collected (10-9-14) from the Barn Island Wildlife Management Area in Stonington, CT (and stored cold). A portion of this sediment was sieved (4-24-15), then frozen for 48 hours. It was later defrosted, and sterilized by microwaves in order to remove and/or destroy indigenous organisms. The sterilized sediment was allowed to cool.

Redart clay was obtained from Sheffield Pottery, Inc., in Sheffield, MA.

All ingredients were thoroughly blended together, and re-homogenized before use.

Amounts added:

Natural sand, ≤ 300 µm: 540 (45% by volume)

Natural sand, ≤ 75 µm: 120 ml (10% by volume)

Sterilized natural marine sediment: 480 ml (40% by volume)

Redart clay: 60 ml (5% by volume)

GZ-203:	≤ 4	GZ-224:	≤ 8
GZ-207:	≤ 8	GZ-225:	≤ 8

* Free-standing water found in the original sample containers was used to represent "pore water."

Overlying Test Water Ammonia:

In order to determine the ammonia levels within the overlying water of each sediment test, samples of overlying water were collected on days 0 and 28, and sent to Phoenix Environmental Laboratories, Inc., in Manchester, CT.

Additional ammonia measurements were conducted at NEB using a salicylate-based color indicator. This was done to insure that the ammonia levels within the test chambers were not above the acceptable range. Otherwise, water changes would have been performed to reduce these ammonia levels (not found to be necessary in this case). See below:

Total Ammonia: (In **mg/L**, using a salicylate-based color indicator.)

	E.	9	mostly small
LC-102	A.	23	mixed sizes / some worms present
	B.	41	mixed sizes / many tiny worms present
	C.	42	mixed sizes
	D.	32	mostly small
	E.	45	mixed sizes

Leptocheirus plumulosus- Sediment Test Breakdown, Day 28 - **Young Counted**

Client: **GZA GeoEnvironmental, Inc.** Test set-up date: 4/30/15

Project: **Wynn-Everett (01.0171521.13 Task 1)** Test ending date: 5/28/15

LC-105

	Qty.	Observations of Young
A.	19	many tiny worms
B.	43	mixed sizes
C.	24	small to medium sized
D.	14	mostly small / many tiny worms
E.	32	mixed sizes

LC-112

A.	69	mixed sizes / many small worms
B.	43	mixed sizes / many small worms
C.	20	mostly small / many small worms
D.	16	mixed sizes
E.	27	mixed sizes / small worms present

GZ-203

A.	65	mixed sizes / some small worms
B.	8	mostly small / tiny worms
C.	0	worms present
D.	19	mixed sizes / worms present
E.	22	mixed sizes

Leptocheirus plumulosus- Sediment Test Breakdown, Day 28 - **Young Counted**

Client: **GZA GeoEnvironmental, Inc.** Test set-up date: 4/30/15

Project: **Wynn-Everett (01.0171521.13 Task 1)** Test ending date: 5/28/15

GZ-207

	Qty.	Observations of Young
A.	34	mixed sizes
B.	39	mixed sizes
C.	0	small
D.	0	3 larger worms w/legs found
E.	0	

GZ-209

	Qty.	Observations of Young
A.	134	mixed sizes
B.	21	
C.	28	
D.	35	
E.	25	

GZ-213

	Qty.	Observations of Young
A.	0	
B.	13	mixed sizes
C.	0	
D.	15	mixed sizes
E.	0	

Leptocheirus plumulosus- Sediment Test Breakdown, Day 28 - **Young Counted**

Client: **GZA GeoEnvironmental, Inc.** Test set-up date: 4/30/15

Project: **Wynn-Everett (01.0171521.13 Task 1)** Test ending date: 5/28/15

GZ-214

	Qty.	Observations of Young
A.	14	small - med.
B.	8	all small
C.	15	all small
D.	10	all small
E.	11	all small

GZ-217

	Qty.	Observations of Young
A.	2	small
B.	0	
C.	2	small
D.	0	
E.	5	small

GZ-223

	Qty.	Observations of Young
A.	25	mixed sizes
B.	25	
C.	28	
D.	51	2 red worms - midge larvae?
E.	9	

Leptocheirus plumulosus- Sediment Test Breakdown, Day 28 - **Young Counted**

Client: **GZA GeoEnvironmental, Inc.** Test set-up date: 4/30/15

Project: **Wynn-Everett (01.0171521.13 Task 1)** Test ending date: 5/28/15

GZ-224

	Qty.	Observations of Young
A.	1	~~mixed sizes~~ sm. medium sized
B.	4	mixed sizes
C.	0	✓
D.	4	mixed sizes
E.	0	

GZ-225

	Qty.	Observations of Young
A.	5	mixed sizes / large sandworm 4-6" approx.
B.	13	mixed sizes
C.	40	mixed sizes
D.	41	mixed sizes
E.	6	mixed sizes

SUMMARY OF TEST RESULTS

APPENDIX C

CHEMICAL ANLAYSIS

REFERENCE TOXICANT DATA

CHAIN OF CUSTODY DOCUMENTS

PHOENIX
Environmental Laboratories, Inc.

Monday, May 11, 2015

Attn: Ms. Kim Wills
New England Bioassay
a Division of GZA GeoEnvironmental
77 Batson Drive
Manchester, CT 06040

Project ID: GZA-EVERETT SEDIMENT
Sample ID#s: BJ12838 - BJ12851

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

Phyllis Shiller
Laboratory Director

*** No Data to Display ***

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

Phyllis Shiller

*** No Data to Display ***

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

REMARKS/NOTES:

APPENDIX G

PAST ECOLOGICAL ASSESSMENTS

To assess the potential risk to benthic invertebrates due to exposure to sediment contaminants, Menzie-Cura submitted five water-side samples and three Mystic river reference samples to a toxicity testing laboratory for 28-day tests using *Leptocheirus plumulosus*; endpoints measured were survival, growth, and reproduction. They also collected soft-shell clams (*Mya arenaria*) for tissue analyses, and compared chemical concentrations in clam tissue to concentrations from the literature that may be associated with toxic effects to benthic invertebrates. Four of the five toxicity test samples showed significantly reduced survival, growth, or reproduction compared to the reference samples. Concentrations of arsenic in soft-shell clam tissue exceeded literature-derived toxicity reference values. Based on these results, Menzie-Cura concluded that contaminants in the sediment presented a significant risk of harm to benthic invertebrates.

Menzie-Cura performed food web assessments for common wildlife species that may feed on benthic invertebrates that have taken up sediment contaminants into their body tissues. Species evaluated were the herring gull (*Larus argentatus*) and raccoon (*Procyon lotor*). Menzie-Cura concluded that sediment contaminants of the water-side do not present a significant risk to wildlife that may feed on benthic invertebrates at the disposal site.

Menzie-Cura developed a list of disposal site-related contaminants of concern by comparing contaminant concentrations in sediment to those in the three reference samples collected from downstream in the Mystic River. GZA performed a detailed evaluation of sediment data, and concluded that arsenic, lead and mercury are the primary contaminants of concern in sediment (see Section 4.1). The contaminant list developed by Menzie-Cura is discussed in Section 4.1 within the context of GZA's evaluation of disposal site-related contaminants of concern.

2.2.2 Human Health Risk Characterization

GEI did not perform a quantitative human health risk assessment as part of its Phase II. GEI considered human access to sediment as limited due to the presence of a partial fence and bulkheads. It also cited an October 11, 2011, Massachusetts Department of Public Health (DPH) P6 fish advisory restricting fish consumption for the stretch of the Mystic River located between the outlet of Lower Mystic Lake and Amelia Earhart Dam (approximately 600 feet upstream of the disposal site) due to contamination by PCBs, and the pesticides dichlorodiphenyltrichloroethane (DDT) and chlordane. Based on the limited access to sediment and the fish advisory for the Mystic River, GEI concluded that human exposure to sediment contaminants was unlikely.

2.3 ECOLOGICAL RESOURCE AND HABITAT DESCRIPTIONS

2.3.1 Aquatic Habitat of the water-side and Lower Mystic River

MassDEP has categorized the Lower Mystic River as a Class SB water body under the Massachusetts Surface Water Quality Standards (314 CMR 4.00). A Class SB water body is a marine surface water classification designated for protection as fish habitat, for other aquatic life and wildlife (including a consideration of their reproduction, migration, growth and other critical functions), and for primary and secondary recreation. The Lower Mystic River is closed to shellfish harvesting due to high bacterial counts.

All of the Inner Boston Harbor/Lower Mystic River is designated as Essential Fish Habitat (EFH) by the National Marine Fisheries Service (NMFS) under the Federal Magnuson Fisheries Conservation and Management Act of 1976. As such, the Lower Mystic River is under the jurisdiction of the New England Fisheries Management Council (NEFMC). According to the NEFMC, the harbor provides EFH for at least one life stage for 23 managed fish species. In addition, the Lower Mystic River may support several fish species that could trigger Massachusetts Department of Marine Fisheries (DMF) Time of Year (TOY) restrictions for dredging and construction activities. Such species include alewife (*Alosa pseudoharengus*), blueback herring (*A. aestivalis*), American shad (*A. sapidissima*), white perch (*Marone americana*), American eel (*Anguilla rastrata*), and Winter Flounder (*Pseudopleuronectus americanus*). TOY restrictions are intended to protect sensitive life stages of fish species including spawning and early development (larval and fry stages).

Since 1989, the Massachusetts Water Resources Authority (MWRA) has monitored water quality parameters in the Inner Boston Harbor and its contributing waters. Data summarized from the two MWRA stations closest to the study area (Station 52, approximately 3,000 feet downstream, and Station 69, approximately 1,000 feet upstream) are indicative of a shallow estuarine habitat, where salinity and temperature fluctuate over wide ranges. Mean salinity values indicate that the area is highly saline most of the time, although salinity fluctuates from nearly freshwater to ocean water salinities. Turbidity is generally low, with some localized events over 50 Nephelometric Turbidity Units (NTU), compared to background values around 5 NTU.

As discussed further below, since approximately 2000, the benthic community of the Lower Mystic River has been the subject of several studies associated with monitoring Confined Aquatic Disposal (CAD) cells for dredged sediments that are contaminated or otherwise unsuitable for open water disposal. As part of that monitoring program, in June 2000, ENSR (2001) performed a survey of the benthic community found in the sand caps placed on the CAD cells and in reference locations in the river outside of the CAD cell footprints. Observations of microbial mats of sulfur-fixing bacteria in the Lower Mystic River were common; these mats are indicators of anoxic (lack of oxygen) conditions at the sediment-water interface. These conditions are likely related to high rates of nitrogen loading and the presence of organic compounds in the water column. Because benthic infauna (i.e., benthic organisms that burrow into the sediment) depend upon oxygenated water at the sediment-water interface, water quality conditions that promote the growth of microorganisms that deplete oxygen in bottom waters negatively impact the development of the benthic community.

2.3.2 Shellfish and Benthic Invertebrate Community

In August 2013, April 2014, and September 2015, GZA biologists conducted detailed shellfish surveys of the inter-tidal and sub-tidal water-side and adjacent portions of the Mystic River. Those surveys were conducted in support of EFH Assessments (GZA, 2015a and 2015b) performed during the Massachusetts Environmental Policy Act (MEPA) review process for the proposed casino development at the Wynn property. The EFH Assessments were prepared to aid the U.S. Army Corps of Engineers and NEFMC in their review of the proposed Wynn Resort development in Everett, which includes dredging in the head of the bay for navigational purposes. The EFH Assessments can also be used to evaluate the

additional work in the water-side site that may be implemented to remediate sediment contamination under the MCP.

In 2013 and 2014 GZA excavated 14 shallow observation plots in the intertidal areas of the southwest shoal, and the north and west shores of the bay to characterize the benthic community. Relatively few viable shellfish were found within the entire inter-tidal area of the water-side site. Only nine individuals of living soft-shell clams (*Mya arenaria*) were found in the inter-tidal area, and all of these individuals were juveniles less than 10 mm in size. One area with a dense concentration of intact dead soft-shell clam shells was observed within the inter-tidal sediments of the southwest shoal area. This concentration of shells appeared to be an intact clam bed of mixed age-classes (i.e., intact articulated bivalve shells, at a uniform depth, with the shell orientation and spacing expected in a living clam bed). The observations of an apparently intact clam bed with 100% mortality of older clams suggests a relatively rapid mortality event within the recent past.

The reason for the apparent rapid die-off of soft-shell clams in the study area is unknown; however, there was a large scale die-off of clams in Boston Harbor in the vicinity of Logan Airport in late Summer or Fall of 2010. That die-off is thought to have been related to the soft-shell clam disease neoplasia[2]. There is evidence to suggest that the susceptibility of soft-shell clams to neoplasia may be increased by exposure to heavy metals, PCBs and PAHs (Bőttger et al., 2013).

In 2015 GZA made observations of soft-shell clams present in the intertidal area of the eastern shore of the bay, and found similar conditions, but with higher densities of living clams; 2% to 10% of the shells observed contained living clams.

Other observations in the inter-tidal zone included live razor clams (*Ensis directus*) and siphon holes, and occasional spent oyster (*Crassostrea virginica*) shells.

To survey the sub-tidal areas, GZA used a camera mounted to a submersible Remotely Operated Vehicle (ROV) to make visual observations, and evaluated six benthic grab samples collected using an Ekman dredge sampler. Living blue mussels (*Mytilus edulis*) were observed on rock and wood attachment sites in intertidal portions of the southwest shoal and near the eastern shore of the bay; however, they were largely absent from the west and north shores of the bay. Viable polychaetes (bloodworms; *Glycera* spp.) were observed within the sediments, but no viable Mollusca species were observed except for some surface snails (Crepidula, Llyanassa, and *Littorina* spp.). Green crabs (*Carcinus maenas*; a non-native species introduced in the 1800s) were present in low numbers in the sub-tidal areas, but again primarily near the Mystic River channel. No sea scallop (*Placopecten magellanicus*) or surf clam (*Spisula solidissima*) (living or spent shells) were found during these surveys.

GZA did not conduct a fish survey, but GZA field personnel did observe several flounder (*Paralichthys* sp.) and sculpin (*Cottus* sp.) during the ROV survey.

During the period from 1998 through 2008, eleven CAD cells were constructed in the greater Boston Inner Harbor area as part of the Boston Harbor Navigation Improvement Project and the Boston Harbor Inner Harbor Dredge Maintenance Project. These CAD cells

[2] A diffuse tumor of the clam circulatory system.

were constructed to contain dredge material that was deemed unsuitable for open water disposal, usually because of elevated levels of sediment contaminants. Eight of those CAD cells were constructed in the Lower Mystic River between the Alford Street (Route 99) bridge and the Tobin Bridge. These CAD cells span a reach of the Lower Mystic River between 0.3 and 1.2 miles seaward from the mouth of the bay. One cell was constructed in the Chelsea River and two were constructed in the Boston Inner Harbor just seaward of the confluence of the Mystic and Chelsea Rivers. Ten of these CAD cells have been capped using sand from dredging operations at the Cape Cod Canal.

The New England District of the U.S. Army Corps of Engineers implements a Disposal Area Monitoring System (DAMOS) that has been monitoring the performance of the Mystic River CAD cells in terms of cap stability, sedimentation over the cap, mixing of cap and ambient sediment, and recolonization by benthic infauna.

These monitoring efforts include video surveys of the sub-tidal sediments within the river. Epi-benthic organisms (those that live on the sediment surface) were commonly observed, including flounder and other small and medium size bottom fish, shrimp and crabs. However, the benthic infaunal community of the Lower Mystic River was found to be highly stressed, and in a persistent state of early succession.

Mixing of surficial sediment from benthic infaunal burrow activities (i.e., bioturbation) was monitored by measuring the depth of reduction-oxidation features (referred to as apparent redox potential discontinuity; aRPD) in the surficial sediment. Burrowing depths and benthic infauna abundance were evaluated by measuring sediment-surface water boundary layer roughness (which can increase with greater infauna activity and by the activity of larger individuals), and direct observations of individual benthic infauna, tubes and feeding voids in the sediment profile. These measurements were performed both within the CAD cell caps, and in nearby reference areas that had not been dredged or capped in the recent past.

During its June 2000 survey, ENSR (2001) noted the low biodiversity of the infaunal community of the Boston Inner Harbor and Lower Mystic River, both in the CAD cell caps and at reference stations. Mean aRPD depths (means calculated for individual cap areas) were 2.44 centimeters (cm) or less. However, because of the degraded state of the benthic environment, ENSR also concluded that the impact of the dredging, filling, and capping associated with the CAD cells was far less than if the Mystic River and Boston Inner Harbor area had provided higher quality benthic habitat conditions.

Surveys of the infaunal community were also conducted in 2004 (ENSR, 2007) and 2009 (USACE, 2012), with results similar to those of the 2000 survey. The 2009 survey found the average aRPD depth was less than 2.6 cm, with a maximum observed depth of 5 cm. These conditions were attributed to periodic low oxygen or anoxic conditions at the sediment-water interface due to nutrient and organic loading in the river, and frequent physical disturbances to the surficial sediment.

The executive summary of the 2009 monitoring report (USACE, 2012) stated:

> "The biological mixing zone, estimated by measuring the oxidized layer at the surface of sediment cores, averaged less than 2.6 cm for both CAD cell stations and reference cores. The shallow biological mixing documented in 2009 supported

earlier findings of harbor-wide conditions limiting benthic recolonization to a state of perpetual early succession throughout the harbor. Very fine layering was also apparent at the surface of both CAD cell and reference cores further supporting the persistence of shallow sediment mixing in Boston Harbor."

In other words, there is strong evidence that the sub-tidal, benthic infaunal communities of the Mystic River and Boston Inner Harbor are in poor condition, based on the surveys performed as part of the Army Corps of Engineer's monitoring efforts for the CAD cells. The poor state of the infaunal community in the Mystic River was attributed to nutrient and organic loading that results in low oxygen or anoxic conditions at the sediment-water interface, and frequent physical disturbances of the surficial sediment.

3.0 FIELD INVESTIGATION

GZA performed a sediment coring and sampling program within the study area in August 2013 and March-April 2015. GZA conducted surface water and groundwater seep sampling in May 2015. The following sections discuss the methods and result of these sampling programs.

3.1 SURFACE WATER & GROUNDWATER SEEPS

Neither GEI nor Menzie-Cura analyzed surface water samples for potential contaminants of concern. To evaluate whether groundwater discharge may be resulting in potentially harmful concentrations of disposal site-related contaminants, GZA collected near-shore surface water samples and samples of groundwater visibly discharging at seeps in the inter-tidal zone.

3.1.1 Field Program

Four near-shore surface water samples and two groundwater seep samples were collected on May 21 and 22, 2015, at the locations shown on Figure 2. Field measurements of temperature, pH, dissolved oxygen, conductivity, and turbidity were made at each sample location.

Samples were collected during low tide. Surface water samples were collected using a peristaltic pump from shallow water (less than one foot deep) near the shore. Samples were collected in a manner that limited the disturbance of the sediment at the collection site, and the entrainment of suspended sediment with the water samples. The samples collected for metals analyses were filtered in the field using a 0.45 micrometer (µm) filter; the SVOC and EPH samples were not filtered.

During low tide, groundwater seeps visibly discharge from preferential flow paths through the inter-tidal sediment. Samples of seep discharge were collected by digging a small depression in the sediment at various seep locations, waiting 30 to 45 minutes for suspended sediment in the depression to dissipate, and then collecting water samples with a peristaltic pump.
