APPENDIX I

PROUCL STATISTICAL TEST RESULTS

APPENDIX I

TWO SAMPLE HYPOTHESIS TEST METHODS

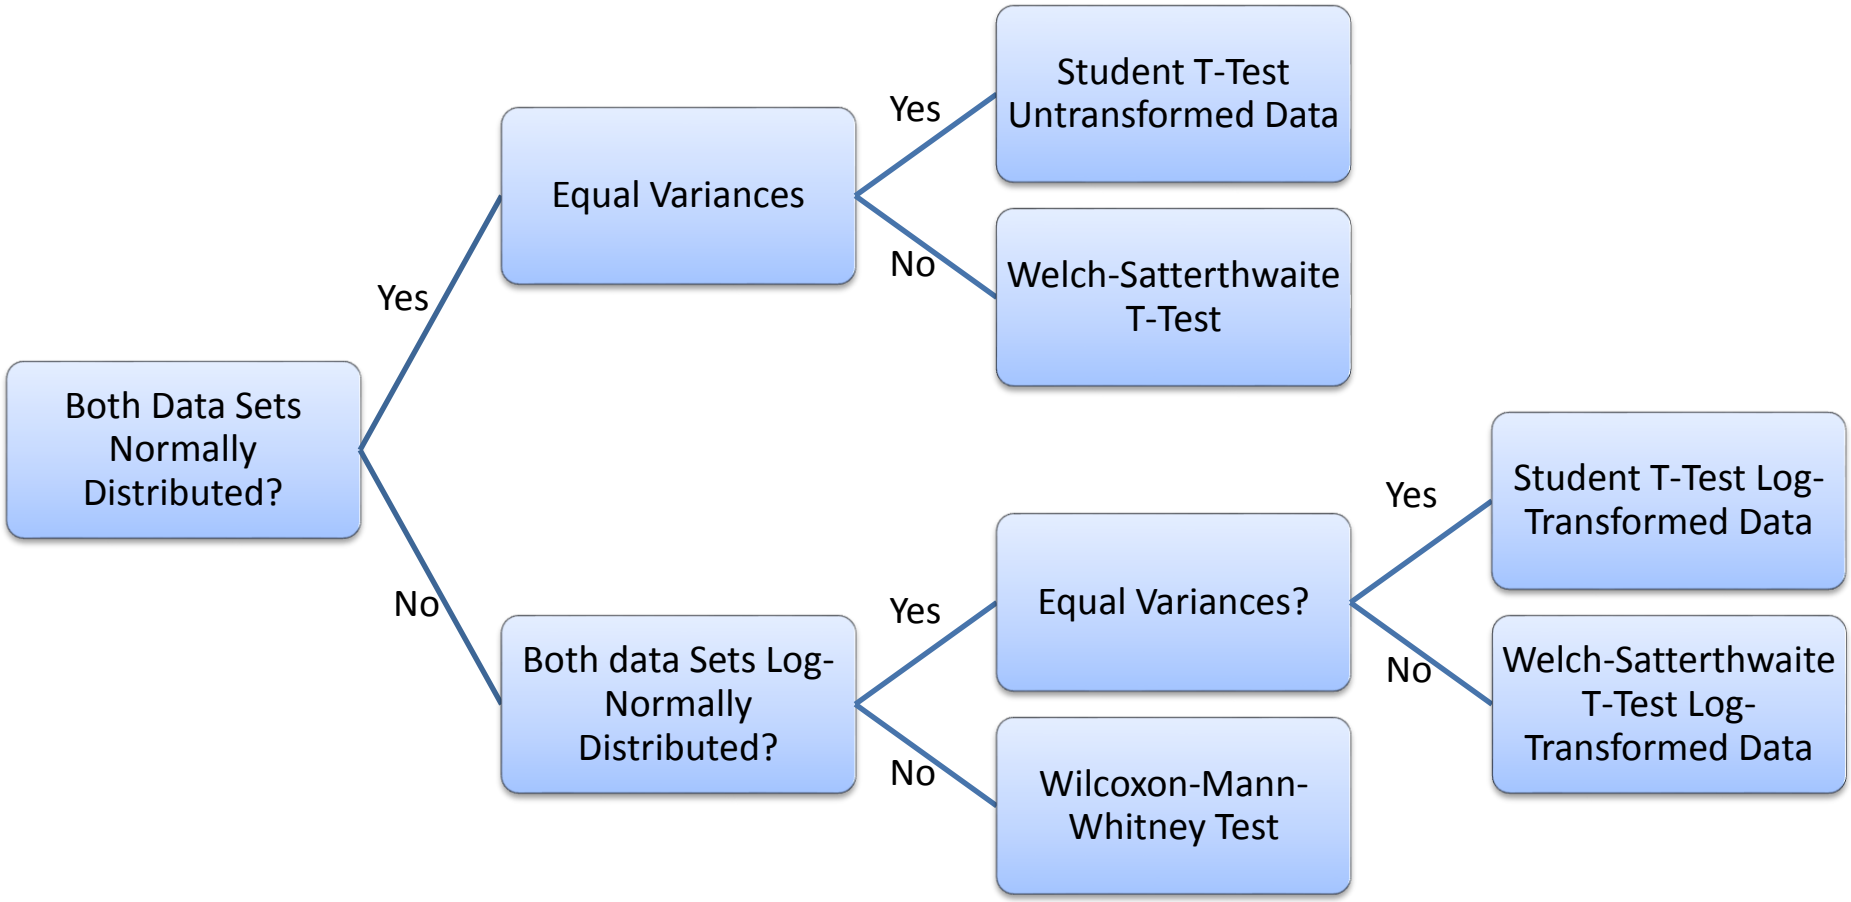
WATER-SIDE VS. LOCAL CONDITIONS DATA

Contaminant concentrations in study area sediment samples were compared to concentrations in Local Conditions samples to delineate the limits of the Massachusetts Contingency Plan disposal site within the Mystic River. (referred to as the "water –side portion of the disposal site" or the "water-side site", or "On-Site"). As discussed in the main text of the Supplemental Phase II Comprehensive Site Assessment (Supplemental Phase II) shallow sediment data for contiguous sample locations within the Water-Side were grouped based on relative concentrations of the main contaminants of concern (arsenic, lead and mercury), and those data sets were compared to the Local Conditions data set to determine whether the Water-Side concentrations were significantly elevated above Local Conditions.

Statistical comparisons between the data sets were performed using two-sample hypothesis tests. The U.S. EPA ProUCL version statistical package was used to perform the statistical tests. The ProUCL guidance document recommends a minimum samples size of eight observations for each data set in order to obtain reliable results from two-sample hypothesis tests. Furthermore, the ProUCL guidance recommends that non-detect results not be used for statistical tests. The data sets for the study area and Local Conditions sediment samples were large enough that these conditions were met for the contaminants of interests for delineating water-side site limits.

Statistical tests were run at the 95 percent confidence level. Table 7 of the Supplemental Phase II presents a summary of the statistical test results. ProUCL reports are included in this Appendix. Figure H-1 presents a decision tree showing which two-sample hypothesis test was used to compare the various data sets for different contaminants. The Students T-test was the preferred hypothesis test to evaluate whether data sets were significantly different. The Students T-test is a parametric test that requires both data sets to be normally distributed, and have equal variances. Shapiro-Wilk and Lilliefors goodness-of-fit tests were run to evaluate whether data sets (raw data and log-transformed data) fit normal distributions. F-tests were used to test for equality of variances between the data sets.

Data sets with normal or log-normal distributions and equal variances were compared using the Students T-test. Data sets with normal distributions but unequal variances were compared using the Welch-Satterthwaite T-tests. Data sets that did not have normal or log normal distributions were compared using the non-parametric Wilcoxon-Mann-Whitney test.



Statistical test results for the Shallow (0'-2') data set are presented in Table 7. Statistical tests were also run for the Surficial (0'-0.5') data set, with identical results, except in the case of lead at the water-side site, which was found to be statistically elevated compared to Local Conditions for the surficial sediment data set, but not for the shallow sediment data set.

Outlier values can skew results for comparisons between data sets when the data sets are not very large. GZA ran all comparisons twice; once with all data for each data set, and once with high outlier results removed from the Local Conditions data set. Tests used to identify outliers were the Dixon's Outlier Test and Rosner's Outlier Test (at the 95 percent confidence level). Table H-1 summarizes the outliers identified via iterative runs of these outlier tests. The distributions of the Local Conditions data sets were found to be more normally or log-normally distributed with the outliers removed, allowing for the use of the more robust T-tests in the place of the non-parametric Wilcoxon-Mann-Whitney test. Removing the outliers did not change the results of the statistical tests except in the case of lead in the water-side site shallow sediment data set; with the Local Conditions outlier removed lead was found to be significantly elevated above Local Conditions, but there is not a significant difference if the Local Conditions outlier is included.

APPENDIX J

HUMAN HEALTH SCREENING

APPENDIX J

SCREENING-LEVEL EVALUATION OF RISKS ASSOCIATED WITH SEDIMENT EXPOSURE – CURRENT CONDITIONS

GZA GeoEnvironmental, Inc. (GZA) conducted a screening-level evaluation of risks to human health associated with sediment exposure for the Water-Side portion of the Former Everett Staging Yard Site. This disposal site ("Site") is identified by Massachusetts Department of Environmental Protection (MassDEP) Release Tracking Number (RTN) 3-13341. This screening-level risk evaluation concluded that oil and/or hazardous material (OHM) in sediment would not pose significant risks to potential receptors (trespassers). The risk evaluation was conducted in accordance with the requirements of the Massachusetts Contingency Plan (MCP) and Guidance for Disposal Site Risk Characterization (1995 and 2002). This appendix presents the risk characterization methodology and the results of risk calculations for sediment exposure under current Site conditions.

1.00 HAZARD IDENTIFICATION AND EXPOSURE POINT CONCENTRATION

Under current conditions, the potential for human exposure to Site sediments is very low. The Site shoreline and inter-tidal areas are very difficult to access. Water and sediment quality of the area are highly degraded, and the area has poor aesthetic qualities. Shellfishing is prohibited in the Lower Mystic River adjacent to the Site. If human exposure were to occur, it would likely be an accidental event as there is nothing about this Site that would attract multiple visits. Nonetheless, for this screening-level evaluation, GZA in an extreme conservative approach assumed that trespassers would be exposed to inter-tidal sediments for 31 events per year. GZA assumed that there would be no exposure to sub-tidal sediment.

The Water-Side portion of the Site was delineated as discussed in Section 4.1 of the Supplemental Phase II Comprehensive Site Assessment (CSA) main text, and as shown on Figure 7. Most of the inter-tidal portion of the Site is located in the eastern third of the head of the Former Everett Staging Yard bay. Sediment samples used to develop Exposure Point Concentrations (EPCs) for this human health risk evaluation were the shallow (0'-2')[1] samples. This inter-tidal area has among the highest concentrations of the main Site contaminants (arsenic, lead, and mercury).

The shallow sediment data that were used for this screening-level risk evaluation are presented in Table J-1 All analytes detected in one or more sediment samples were conservatively assumed to be constituents of concern (COCs) for human receptors, and included in this risk evaluation. As a conservative approach, the maximum detected concentrations were used as the sediment EPCs for this screening-level risk evaluation. Multiple analytes were analyzed via more than one analytical method and the highest detected concentrations among the various analytical methods were used as the EPCs. The EPCs are listed in Table J-2.

[1] Sediment samples with sampling depth including at least a part of the top 2 feet were included in this risk evaluation.

2.00 POTENTIAL HUMAN RECEPTORS AND EXPOSURE PATHWAYS

Children ages 7 to 15 year were assumed to be the most sensitive group exposed to sediment at the Site. Trespassers were assumed to encounter sediment via dermal contact and incidental ingestion. The exposure assumptions used for trespassers are presented in Table J-3. The exposure assumptions were based on the MassDEP default or recommended values.

3.00 TOXICITY VALUES

Toxicity values for this screening-level risk evaluation were obtained from: (1) MassDEP (2014), Office of Research and Standards (ORS) and Bureau of Waste Site Cleanup, Risk-Based Levels for Soil and Groundwater 2014 MCP Standards Development; (2) U.S. Environmental Protection Agency (USEPA; 2015a), Integrated Risk Information System (IRIS) (an on-line database); (3) USEPA, Health Effects Assessment Summary Tables (HEAST; USEPA, 2011); or (4) USEPA (2015b), Peer Reviewed Toxicity Values for Superfund (PPRTV). These values are presented in Tables J-4 and J-5 for non-carcinogenic and carcinogenic effects, respectively. Relative absorption factors (RAFs) are from the MassDEP (2014) Risk-Based Levels for Soil and Groundwater 2014 MCP Standards Development, and are summarized in Table J-6.

4.00 RISK CALCULATION

GZA calculated risk estimates for trespassers and compared these estimates to the MCP risk limits. To evaluate non-cancer risks, a Hazard Quotient (HQ) is calculated. The HQ, a ratio of the receptor's quantified exposure to the "acceptable" level of exposure, provides a general indication of whether exposures are likely to result in adverse health effects, but does not represent the severity of effects associated with an exposure. To evaluate the non-cancer effects for each COC, the estimated average daily dose (ADD) or average daily exposure (ADE) is divided by the appropriate reference dose (RfD) or reference concentration (RfC) to yield an HQ:

$$HQ_{oral} \text{ or } HQ_{dermal} = \text{ADD (mg/kg-day)/RfD (mg/kg-day)}$$

For multiple constituent exposures, HQs are summed for all COCs to yield a Hazard Index (HI) for an individual exposure pathway. A cumulative HI is derived by summing the HIs for each exposure pathway for each receptor. A cumulative HI equal to or less than 1, the Cumulative Non-cancer Risk Limit, indicates that a receptor's exposure is equal to or less than the "acceptable" exposure level and it is considered unlikely that adverse health effects would occur. However, a cumulative HI greater than 1 does not imply that health impacts would necessarily be expected. The appropriateness of the exposure assumptions and the basis of the toxicity values used in calculation of the HI must also be considered. This approach assumes that toxic effects by different constituents are additive.

Cancer risks were evaluated as probabilities. The Excess Lifetime Cancer Risk (ELCR) estimate is considered to be an upper bound probability of the likelihood of developing cancer over a lifetime as a result of exposure to individual constituents. To assess excess lifetime cancer risks, the lifetime average daily doses (LADDs) or lifetime average daily exposures (LADEs) are multiplied by their respective cancer slope factors (CSFs) or unit risks to yield a COC-specific lifetime cancer risk estimate:

$$ELCR_{oral} \text{ or } ELCR_{dermal} = LADD \text{ (mg/kg-day)} \times CSF \text{ (mg/kg-day)}^{-1}$$

For multiple constituent exposures, COC-specific cancer risk estimates for specific exposure pathways are summed to yield a pathway-specific cancer risk estimate. A cumulative receptor cancer risk is calculated by summing pathway-specific ELCRs. The summation assumes that individual intakes are small. It also assumes independence of action by the constituents involved (i.e., there are no synergistic or antagonistic interactions, and all constituents have the same toxicological mechanism and endpoint).

The calculated cumulative receptor cancer risk estimates are compared to the Cumulative Cancer Risk Limit of 1×10^{-5} specified in the MCP. This level represents an incremental probability of one in 100,000 that an individual may develop cancer over his or her lifetime due to exposures to COCs at the Site.

Pathway-specific risk calculations for residents are presented in Table J-7 and Table J-8 and summarized in Table J-9. The risk estimates for trespassers do not exceed the applicable MCP risk limits, indicating residual OHM in sediment does not pose significant risks to trespassers.

5.00 CONCLUSION

The risk estimates for sediment exposure are summarized in Table J-9. The non-cancer and cancer risk estimates for the trespasser receptor group (HI = 0.44 and ELCR = 9.9×10^{-6}) do not exceed the MCP risk limits (i.e., Hazard Index equal to 1 and the MCP cancer risk limit of ELCR equal to one in one hundred thousand (1×10^{-5})).

Even if the HI and ELCR calculated for trespassers via soil exposure (i.e., HI[2] = 0.1~0.2 and ELCR 1×10^{-6}, as presented in the Phase II Comprehensive Site Assessment by GEI[3] in 2012) and the HI and ELCR calculated for trespassers via sediment exposure (i.e., HI = 0.44 and ELCR 9.9×10^{-6}, as shown in this screening-level risk evaluation) were summed to represent potential cumulative risks to trespassers via both soil and sediment exposure, the results would not exceed the MCP risk limits.

In summary, residual OHM in sediment does not pose significant risks to trespassers based on the screening-level risk evaluation.

Notes:
1. Concentrations are presented in units of milligrams per kilogram (mg/kg) or parts per million (ppm).
2. <= less than listed laboratory reporting limits (RLs).
3. "-" = Not analyzed for the compound/parameter.

VOC = Volatile Organic Compound; SVOC = Semi-volatile Organic Compound
EPH = Extractable Petroleum Hydrocarbon; SIM=Selective Ion Monitoring

TABLE J-2
SUMMARY OF EXPOSURE POINT CONCENTRATIONS
Everett Staging Yard
Everett, Massachusetts

COC	EPC1 Maximum Detected Concentration in Sediment[a] (mg/kg)
2-Butanone	0.012
Acetone	0.43
Carbon Disulfide	0.014
2-Methylnaphthalene	0.42
Acenaphthene	0.27
Acenaphthylene	1.3
Anthracene	1.7
Benzo(a)Anthracene	2.9
Benzo(a)Pyrene	2.3
Benzo(b)Fluoranthene	3.4
Benzo(g,h,i)Perylene	1.0
Benzo(k)Fluoranthene	0.69
Bis(2-Ethylhexyl)phthalate	7.3
Chrysene	3.5
Dibenzo(a,h)anthracene	0.40
Fluoranthene	5.9
Fluorene	0.38
Indeno(1,2,3-cd)Pyrene	1.2
Naphthalene	1.4
Phenanthrene	1.9
Pyrene	5.4
C11-C22 Aromatic Fraction	217
C19-C36 Aliphatic Fraction	188
C9-C18 Aliphatic Fraction	59
Aroclor - 1248	0.61
Aroclor - 1254	0.82
Aroclor - 1260	0.31
Aroclor - 1262	0.0092
Antimony	2.3
Arsenic	210
Barium	92
Beryllium	0.67
Cadmium	3.4
Chromium (total)	91
Lead	1210
Mercury	12
Nickel	84
Selenium	67
Silver	4.1
Vanadium	66
Zinc	1150

Note:
a. The sediment exposure point concentration (EPC) is based on the maximum detected concentration from all sediment samples listed in Table J-1.

Abbreviations:
COC = constituent of concern.

TABLE J-3
TRESPASSER EXPOSURE PROFILE
Everett Staging Yard
Everett, Massachusetts

Equations Used to Calculate Average Daily Dose (ADD) and Lifetime Average Daily Dose (LADD)

EXPOSURE PATHWAY: Dermal Contact with Sediment

$$ADD_{dermal} = \frac{EPC_{sediment} * DCR * EF * ED * EP * RAF_{dermal\text{-}nc} * C1}{BW * AP_{nc}} \quad \text{Equation 5}$$

$$LADD_{dermal} = \frac{EPC_{sediment} * DCR * EF * ED * EP * RAF_{dermal\text{-}c} * C1}{BW * AP_{c}} \quad \text{Equation 6}$$

Parameter	Definition	Units	Youth (ages 7-15)	Rationale/Reference
ADD_{dermal}	Average Daily Dose	mg/kg-day	calculated	Equation 5
$LADD_{dermal}$	Lifetime Average Daily Dose	mg/kg-day	calculated	Equation 6
$EPC_{sediment}$	Exposure Point Concentration in Sediment	mg/kg	TABLE J-2	See Text
DCR	Dermal Contact Rate	mg/day	2928	DCR is the body part specific skin surface area (SA) multiplied by the adherence factor (AF). Body parts assumed to be exposed are hands (SA = 791 cm^2), forearms (1,002 cm^2), and feet (SA = 1,135 cm^2), obtained from the Trespasser scenario presented in MassDEP, April 2002, Technical Update. The AF for sediment was conservatively assumed to be 1mg/cm^2.
EF	Exposure Frequency	events/year	31	1 day per week during the non-winter months of April through October
ED	Exposure Duration	days/event	1	MassDEP, 1995
EP	Exposure Period	years	8	interval for age group
RAF_{dermal}	Relative Absorption Factor	unitless	chemical-specific	TABLE J-6
C1	conversion factor for units	kg/mg	1E-06	Constant
BW	Body Weight of Receptor	kg	38	Mean body weight for females in the identified age group
AP_{nc}	Averaging Period, non-cancer	days	2,920	Equals EP * 365 days/year
AP_c	Averaging Period, cancer	days	25,550	Equals average lifetime, 70 years * 365 days/year

Abbreviation:
MassDEP = Massachusetts Department of Environmental Protection.

TABLE J-3
TRESPASSER EXPOSURE PROFILE
Everett Staging Yard
Everett, Massachusetts

Equations Used to Calculate Average Daily Dose (ADD) and Lifetime Average Daily Dose (LADD)

EXPOSURE PATHWAY: Ingestion of Sediment

$$ADD_{oral} = \frac{EPC_{sediment} * IR_{sediment} * EF * ED * EP * RAF_{oral\text{-}nc} * C1}{BW * AP_{nc}} \quad \text{Equation 7}$$

$$LADD_{oral} = \frac{EPC_{sediment} * IR_{sediment} * EF * ED * EP * RAF_{oral\text{-}c} * C1}{BW * AP_{c}} \quad \text{Equation 8}$$

Parameter	Definition	Units	Youth (ages 7-15)	Rationale/Reference
ADD_{oral}	Average Daily Dose	mg/kg-day	calculated	Equation 7
$LADD_{oral}$	Lifetime Average Daily Dose	mg/kg-day	calculated	Equation 8
$EPC_{sediment}$	Exposure Point Concentration in Sediment	mg/kg	TABLE J-2	See Text
$IR_{sediment}$	Sediment Ingestion Rate	mg/day	50	MassDEP, 1995
EF	Exposure Frequency	events/year	31	1 day per week during the non-winter months of April through October
ED	Exposure Duration	days/event	1	MassDEP, 1995
EP	Exposure Period	years	8	interval for age group
RAF_{oral}	Relative Absorption Factor	unitless	chemical-specific	TABLE J-6
C1	conversion factor for units	kg/mg	1E-06	Constant
BW	Body Weight of Receptor	kg	38	Mean body weight for females in the identified age group
AP_{nc}	Averaging Period, non-cancer	days	2,920	Equals EP * 365 days/year
AP_{c}	Averaging Period, cancer	days	25,550	Equals average lifetime, 70 years * 365 days/year

Re: Notification Pursuant to the Massachusetts Contingency Plan
Availability of Supplemental Phase II – Comprehensive Site Assessment
(Former) Everett Staging Yard
1 Horizon Way
Everett, Massachusetts
Release Tracking Number 3-13341

To Whom It May Concern:

On behalf of Wynn MA, LLC, and in accordance with section 40.1403(3)(e) of the Massachusetts Contingency Plan (MCP), GZA GeoEnvironmental, Inc. (GZA) is notifying you of the availability of a Supplemental Phase II – Comprehensive Site Assessment (Phase II) for the water-side portion of the above-referenced Disposal Site (the Site). A summary of the report is as follows:

- Historic releases of Oil and Hazardous Materials (OHM) at the Former Everett Staging Yard resulted in the contamination of sediments in an embayment of the Mystic River. A previous Stage II Ecological Risk Characterization concluded that contaminants in sediment present a significant risk of harm to the benthic (bottom dwelling) community. The main goals of this Supplemental Phase II were to delineate the limits of the MCP disposal site within the river, and to develop clean-up goals to define what portion of the disposal site within the river would need to be remediated in order to achieve a condition of No Significant Risk as defined by the MCP. The embayment and adjacent portions of the Mystic River that may have been impacted by those releases is referred to in this report as the "water-side" portion of the disposal site.

- GZA performed an extensive sediment sampling and analysis program for the water-side, and collected sediment samples from locations in the Mystic River that are remote from the Former Everett Staging Yard Site; these remote samples were collected to represent what is referred to in the MCP as Local Conditions (essentially background conditions, as influenced by past human activities) within the river. Based on patterns in contaminant concentrations within the water-side sediments, and on statistical comparisons between water-side data and the Local Conditions samples, GZA identified arsenic, lead

Proactive by Design

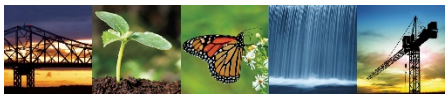
and mercury as the main Contaminants of Potential Ecological Concern in sediment associated with the Former Everett Staging Yard Site, and delineated an area of approximately 8.44 acres as the water-side portion of the disposal site.

- Selected surficial sediment samples were run for chemical analyses and for 28-day, whole sediment toxicity tests using the marine species *Leptocheirus plumulosus*. The toxicity test results and chemical data were used to develop clean-up goals for arsenic, lead and mercury. Those clean-up goals were then used to delineate the approximately 6.82-acre area of the water-side portion of the disposal site that would need to be remediated to achieve a condition of No Significant Risk.

- Although the Phase III study used to select a remedial alternative under the provisions of the MCP has not yet been completed, at the present time it appears that the remediation of the water-side portion of the disposal site will involve dredging and removing surficial sediment, and replacing the dredged sediment with clean sand. Because of the degraded condition of the Mystic River benthic habitat, and the shallow burrowing depths of the benthic species in this stretch of the river, a relatively thin layer of sand would effectively prevent the exposure of these organisms in the sub-tidal portions of the water-side. However, a dredge depth on the order of 2 feet may be the practical minimum depth of dredging and clean backfill.

- GZA also performed a surface water and groundwater seep sampling program. Based on the results of that program, it is GZA's opinion that the discharge of contaminated groundwater has not significantly impacted surface water quality in the Mystic River. Ongoing Release Abatement Measure (RAM) activities being conducted on the upland portion of the disposal site will further reduce the potential for disposal site contaminants to be transported into the Mystic River and associated sediments.

If you have any questions about the report, please do not hesitate to contact the undersigned at the telephone number above, or Bob DeSalvio at 857-770-7801.



Very truly yours,

GZA GEOENVIRONMENTAL, INC.

Re: Notice to Owners of Property within the Boundaries of a Disposal Site
(Former) Everett Staging Yard
1 Horizon Way
Everett, Massachusetts
Release Tracking Number 3-13341

Dear Executive Director Vitale:

On behalf of Wynn MA, LLC, and in accordance with section 40.1406(1) of the Massachusetts Contingency Plan (MCP), GZA GeoEnvironmental, Inc. (GZA) is notifying you that the Mystic River sediments within a portion of the property owned by the Boston Water and Sewer Commission (BWSC) are within the disposal site identified as the (Former) Everett Staging Yard in Everett, Release Tracking Number (RTN) 3-13341. This determination was made as part of a recently completed Supplemental Phase II – Comprehensive Site Assessment (Phase II) completed in accordance with the MCP for the water-side portion of the (Former) Everett Staging Yard property. Two figures from the Phase II are attached: Figure 1 depicts the location of the disposal site, and Figure 7 indicates the disposal site boundaries, including the portion of the BWSC property. A summary of the Phase II is as follows:

- Historic releases of Oil and Hazardous Materials (OHM) at the Former Everett Staging Yard resulted in the contamination of sediments in an embayment of the Mystic River. A previous Stage II Ecological Risk Characterization concluded that contaminants in sediment present a significant risk of harm to the benthic (bottom dwelling) community. The main goals of this Supplemental Phase II were to delineate the limits of the MCP disposal site within the river, and to develop clean-up goals to define what portion of the disposal site within the river would need to be remediated in order to achieve a condition of No Significant Risk as defined by the MCP. The embayment and adjacent portions of the Mystic River that may have been impacted by those releases is referred to in this report as the "water-side" portion of the disposal site.

- GZA performed an extensive sediment sampling and analysis program for the water-side, and collected sediment samples from locations in the Mystic River that are remote from the Former Everett Staging Yard Site; these remote samples were collected to represent what is referred to in the MCP as Local Conditions (essentially background conditions, as influenced by past human activities) within the river. Based on patterns in contaminant concentrations within the water-side sediments, and on statistical comparisons between water-side data and the Local Conditions samples, GZA identified arsenic, lead and mercury as the main Contaminants of Potential Ecological Concern in sediment associated with the Former Everett Staging Yard Site, and delineated an area of approximately 8.44 acres as the water-side portion of the disposal site.

- Selected surficial sediment samples were run for chemical analyses and for 28-day, whole sediment toxicity tests using the marine species *Leptocheirus plumulosus*. The toxicity test results and chemical data were used to develop clean-up goals for arsenic, lead and mercury. Those clean-

Proactive by Design

up goals were then used to delineate the approximately 6.82-acre area of the water-side portion of the disposal site that would need to be remediated to achieve a condition of No Significant Risk.

- Although the Phase III study used to select a remedial alternative under the provisions of the MCP has not yet been completed, at the present time it appears that the remediation of the water-side portion of the disposal site will involve dredging and removing surficial sediment, and replacing the dredged sediment with clean sand. Because of the degraded condition of the Mystic River benthic habitat, and the shallow burrowing depths of the benthic species in this stretch of the river, a relatively thin layer of sand would effectively prevent the exposure of these organisms in the sub-tidal portions of the water-side. However, a dredge depth on the order of two feet may be the practical minimum depth of dredging and clean backfill.

- GZA also performed a surface water and groundwater seep sampling program. Based on the results of that program, it is GZA's opinion that the discharge of contaminated groundwater has not significantly impacted surface water quality in the Mystic River. Ongoing Release Abatement Measure (RAM) activities being conducted on the upland portion of the disposal site will further reduce the potential for disposal site contaminants to be transported into the Mystic River and associated sediments.

For additional information, please contact Robert DeSalvio, Wynn MA, LLC, 101 Station Landing, 2nd Floor, Everett, Massachusetts 02155, (857) 770-7801.

Very truly yours,

GZA GEOENVIRONMENTAL, INC.

INFORMATIONAL NOTICE TO PROPERTY OWNERS

As Required by 310 CMR 40.1406 of the Massachusetts Contingency Plan (MCP)

A. DISPOSAL SITE ADDRESS: (associated with Release Tracking Number provided above)

1. Street Address: 1 HORIZON WAY

2. City/Town: EVERETT 3. ZIP Code: 02149-0000

4. Assessor's Parcel ID: H0-06-000191

B. THIS NOTICE IS BEING PROVIDED TO THE FOLLOWING PROPERTY OWNER:

1. Name of Property Owner: BOSTON WATER AND SEWER COMMISSION

2. Address of Property For Which This Notice is Being Provided: (property owned by person named in B1)

a. Street Address: ALFORD STREET

b. City/Town: BOSTON c. ZIP Code: 02129-0000

3. Assessor's Parcel ID: 0201834050

C. THIS NOTICE IS BEING GIVEN : (check one)

- [x] 1. Upon Completion of a Phase II Comprehensive Site Assessment.
- [ ] 2. Upon Submittal of a Permanent or Temporary Solution Statement (i.e., Site Closure Report).
- [ ] 3. Upon Completion of Additional Investigation showing that Oil or Hazardous Material is not Present at the Property.

D. DESCRIPTION OF OIL AND/OR HAZARDOUS MATERIAL PRESENT OR LIKELY TO BE PRESENT AT THE PROPERTY : (check all that apply)

AFFECTED ENVIRONMENTAL MEDIA	PRINCIPAL CHEMICAL(S) PRESENT
[ ] 1. Soil	
[ ] 2. Groundwater	
[ ] 3. Surface Water	
[x] 4. Sediment	ARSENIC, LEAD, MERCURY
[ ] 5. Indoor Air	
[ ] 6. Soil Gas	
[ ] 7. Other: (specify)	

E. ATTACHMENTS PROVIDED WITH THIS NOTICE, AS REQUIRED BY 310 CMR 40.1406:

- [x] 1. A Copy of the Map Showing or a Description Describing the Area where the Oil and/or Hazardous Material is or is likely to be Present.
- [x] 2. A Copy of the Phase II Comprehensive Site Assessment or Permanent or Temporary Solution Statement Conclusions.
- [ ] 3. Specify the category of Solution that applies to the Disposal Site.
  - [ ] 1. Permanent Solution with No Conditions.
  - [ ] 2. Permanent Solution with Conditions.
    - [ ] i. An Activity and Use Limitation has been implemented.
    - [ ] ii. An Activity and Use Limitation has not been implemented.
  - [ ] 3. Temporary Solution.

MASSACHUSETTS REGULATIONS THAT REQUIRE THIS NOTICE

This notice is being provided pursuant to the Massachusetts Contingency Plan and the notification requirement at 310 CMR 40.1406. The Massachusetts Contingency Plan is a state regulation that specifies requirements for parties who are taking actions to address releases of chemicals (oil or hazardous material) to the environment.

THE PERSON(S) PROVIDING THIS NOTICE

This notice has been sent to you by the party(ies) who is/are addressing a release of oil or hazardous material to the environment at the location listed in **Section A** on the reverse side of this form.

PURPOSE OF THIS NOTICE

Parties who are taking actions to respond to releases of oil or hazardous material to the environment are required by state regulations (referred to above) to notify the owners of property where the oil or hazardous material is or is likely to be present. These same parties are also required to notify property owners upon completion of actions to address the oil or hazardous material, or if additional investigations show that the oil or hazardous material is not present at a property. **Section C** on the reverse side of this form indicates the circumstance under which you are receiving this notice at this time.

INFORMATION RELATED TO YOUR PROPERTY

Section D on the reverse side of this form indicates the type(s) of oil or hazardous material that is or is likely to be present at your property, and the environmental medium (e.g., soil or groundwater) where it is or is likely to be present. **Please note** that when an investigation indicates that the oil or hazardous material is or is likely to be present at your property, this does not mean that the oil or hazardous material is posing a health risk to you. Parties who are taking actions to address oil and hazardous material releases are required by state regulations to adequately investigate these releases and take necessary actions to ensure that affected properties meet standards that are protective of human health and the environment.

ATTACHED MAP OR DESCRIPTION AND REPORT CONCLUSIONS

The party providing this notice to you is required to attach a map or description that indicates the boundaries of the area where the oil or hazardous material is or is likely to be present, and the conclusions of the site investigation or closure report **(Section E).** These attachments should give you additional information about the nature and location of the oil or hazardous material with respect to your property.

FOR MORE INFORMATION

Information about the general process for addressing releases of oil or hazardous material under the Massachusetts Contingency Plan and related public involvement opportunities may be found at http://www.mass.gov/eea/agencies/massdep/cleanup.

For more information regarding this notice, you may contact the party listed in **Section F** of this form. Information about the disposal site identified in **Section A** is also available in files at the Massachusetts Department of Environmental Protection.

See http://public.dep.state.ma.us/SearchableSites2/Search.aspx to view site-specific files on-line or http://mass.gov/eea/agencies/massdep/about/contacts/conduct-a-file-review.html if you would like to make an appointment to see these files in person. Please reference the **Release Tracking Number** listed in the upper right hand corner on the reverse side of this form when making file review appointments.
